

## BRASS D.O.T. FOR AIR BRAKE TUBE (BDOT-AB-TUBE)

### Applications:

Air brake systems. Used with copper tubing for rigid plumbing along frame and air tank.

CAUTION: NOT for use on frame to axle or tractor-to-trailer connections, nor from compressor discharge.

1400 SERIES

### Assembly:

- Cut tube square and deburr
- Slide nut onto tubing with threaded end of nut toward tubing end.
- Slide sleeve onto tubing.

Note: Air brake fittings are supplied with a special sleeve that has a smooth, continuously curved outer contour.

It is illegal to interchange any component not made and identified specifically for air brake use.

- Shoulder tube in fitting and hand tighten nut onto fitting
- Wrench tighten past hand tight:

(2 turns) 1/4 to 1/2

(3 turns) 5/8 to 3/4"
