

Vaddio Deployment Tool

Current Release

Vaddio Deployment Tool 1.1.0

January 27, 2020

New Features

- Bulk operations are now supported:
 - Set initial admin password
 - Change admin passwords
 - Log in to multiple devices simultaneously
 - Export device data
- Devices are shown as "Not Set Up" on the Devices page if the initial device set-up needs to be done.
- Device detail pages provide the ability to individually complete initial device set-up or change devices' admin passwords.
- The new Device Log page shows actions performed on devices (such as reboots and firmware updates) along with the results.
- Device information can be exported from workspaces as a .csv file.
- Device detail pages now include a Log tab to display diagnostic information that could be helpful in the event that you need to contact Vaddio Technical Support.
- The Advanced search on the Find Devices page now supports CIDR notation.

Improvements

- Multiple spaces in text strings (such as group or workspace names) are now converted to single spaces.
- If a complex "advanced scan" included overlapping ranges (for example, 10.30.1.1–10.30.3.254 and 10.30.2.1–10.30.3.254) or specified the same range more than once, the scan did not complete successfully. This has been fixed.
- In some cases, the Devices page pointed to outdated or unavailable firmware. This has been fixed.
- In some cases, recalling a camera's home preset could generate an error message although the operation was completed successfully. This has been fixed.
- It was possible to specify complex scans that returned too many results, causing errors. Scans are now limited to 65536 results total.

Release History

Vaddio Deployment Tool 1.0.0

October 14, 2019

Notes

- Initial release.
