XAP-1500

Release Firmware Version 6.3.0

Recommended Update

Note: It is NOT recommended to update the firmware wirelessly.

Enhancements:
- You will now not be required to do a reboot when making wireless settings / profile changes
- Corrected a subnet mask display error
- This update will provide support for future Wireless Controller updates
- Minor UI improvements

Firmware Version 6.1.3

Enhancements:
- OS and driver updates
- Minor UI improvements and bug fixes
- You will now be automatically notified in the user interface when a firmware update is available.

Firmware Version 5.0.5.2

Enhancements:
- KRACK vulnerability patch

Firmware Version 5.0.5

- Under certain conditions, APs running 5.0.3 may occasionally reboot or lock up. If you're using version 5.0.3, this is a critical upgrade.
- If you're using 5.0.2 no upgrade is required unless you would like to take advantage of some of the enhancements including increased Wi-Fi performance.
- If your APs are on 4x and you are not using a wireless controller, no upgrade is required.

Note: If any unexpected behavior occurs, we recommend you reset your access point to factory default.

Issues Resolved:
- Driver updates and minor bug fixes

Enhancements:
- Improved wireless throughput when used with the XWC-1000 Wireless Controller
- Improved stability
- Time zone can now be set on the AP
- Option for the AP to find the XWC-1000 Wireless Controller if not found during the automatic discovery process via the "Link Controller" feature in the "Administration" section.
- Offers limited user interface access to the AP when it is connected to the XWC-1000 Wireless Controller.

Downloads

- Upgrade Instructions

Current Version:
- XAP-1500 Firmware Version 6.3.0

Previous Version:
- XAP-1500 Firmware Version 6.1.3

- XAP-1500 Firmware Version 5.0.5.2

- XAP-1500 Firmware Version 5.0.5

- XAP-1500 Firmware Version 5.0.2

Configuration:
- IP Addressing

- AP Factory Reset

Firmware Version 5.0.2

Issues Resolved:

*Note: You must restore the AP to factory default settings
after upgrading this version firmware.*

- Fixed the bug that allowed the stand alone Access Point UI to operate even while under control of the XWC-1000 controller. Prior to this bug fix, logging into the AP would disable controller communications and the controller would then show the AP as being offline.
- Minor bug fixes

Enhancements:

No enhancements included in this build

Firmware Version 5.0.1

Enhancements:

- Controller compatibility
- New look to the standalone AP UI

Firmware Version 4.0.3

Issues Resolved:

- A small number of XAP-1500's have exhibited issues when rebooting that can cause the device to stop broadcasting until the power is disconnected for 30-60 seconds and then reconnected.
- Updated some help messages.
- Updated some language issues in the Web Interface

Enhancements:

No enhancements included in this build
