XAP-310

Release Firmware Version 6.3.0

Recommended Update

Note: It is NOT recommended to update the firmware wirelessly.

Enhancements:
- You will now not be required to do a reboot when making wireless settings/profile changes
- Corrected a subnet mask display error
- This update will provide support for future Wireless Controller updates
- Minor UI improvements

Release Firmware Version 6.1.3

Enhancements:
- OS and driver updates
- Minor UI improvements and bug fixes
- You will now be automatically notified in the user interface when a firmware update is available.

Release Firmware Version 5.0.5.2

Note: If you are going to use your AP with a Luxul Wireless Controller use the controller to update the AP firmware.

Enhancements:
- KRACK vulnerability patch

Issues Resolved:
- None

Known Issues:
- None

Firmware Version 5.0.5

Note: If you are going to use your AP with a Luxul Wireless Controller use the controller to update the AP firmware.

Caution: You must restore the AP to factory default settings after upgrading the firmware from 4.X to 5.X firmware.

Issues Resolved:
- Firmware Version 5.0.5 is considered a maintenance release and offers minor updates and bug fixes.

Downloads

- Upgrade Instructions

Current Version:

- XAP-310 Firmware Version 6.3.0

Previous Version:

- XAP-310 Firmware Version 6.1.3

- XAP-310 Firmware Version 5.0.5.2

- XAP-310 Firmware Version 5.0.5

- XAP-310 Firmware Version 5.0.2

Configuration:

- IP Addressing

- AP Factory Reset

Firmware Version 5.0.2 – Critical Update

Note: If you are going to use your AP with a Luxul Wireless Controller use the controller to update the AP firmware.

Caution: You must restore the AP to factory default settings after upgrading the firmware from 4.X to 5.X firmware.

Issues Resolved:
- Driver updates and minor bug fixes

Enhancements:
- New User Interface features:
  - Time zone can now be set on the AP
  - Option for the AP to find the XWC-1000 controller if not found during the automatic discovery process
  - Offers limited user interface access to the AP when it is connected to a controller

Known Issues:
- In some web browsers there is no 'spinning wheel' when restoring a config or factory resetting. This may also result in the automatic redirect not being triggered when the reset/restore is finished. If this happens, simply reload the UI.
- Help info for the 3 items in Link Controller not currently available. They are self-explanatory and will be added in the next release.

Firmware Version 5.0.1A

Enhancements:
- Controller compatibility
- New look to the standalone AP UI

Note: You must restore the AP to factory default settings after upgrading the firmware from 4.X to 5.X firmware.
