Needs Analysis:
Telemedicine

Connecting Your Care

Healthcare professionals are embracing new ways of collaboration and delivery of care through AV solutions. Help them create a system that works for their specific application with this simple list of questions to discover the perfect AV prescription.

THE BASICS:

- What type of medicine do you practice?
- How many practitioners in the office?
    - » Looking for the same setup? If no, describe key differences.
- Do your telemedicine systems need to be mobile and moved from room to room?
- Does your video teleconferencing equipment need to be securely stored?
- Do you typically consult with other specialists?
    - » Who?
    - » Where?
    - » Why?
    - » Is there specific content that will be shared? Describe the content & purpose.

UNDERSTANDING END-TO-END SETUPS:

- What are the parameters of the physicians' setup?
    - » Where will it be located?
    - » Do you have any pre-existing equipment?
    - » Will the telemedicine systems in the building need to be monitored from a single dashboard?
    - » Do you need to view content simultaneously while communicating with patients?
      (ie) test results, patient history, etc.
        - ◊ If so, can your current workstation accommodate multiple monitors?
- What are the parameters of the patient's setup?
    - » Calling from home?
    - » Calling from a facility?
        - ◊ Bandwidth capabilities?
        - ◊ Power anomalies?

SYSTEM REQUIREMENTS:

- Are there any key regulatory considerations?
    - » GREENGUARD
    - » ADA
    - » Does your equipment enclosure need to be anti-microbial or easy wiped down for disinfecting?
    - » Are you in an area with potentially seismic activity and need to keep critical systems up and running?
- Given the practice – what are the most critical details to be conveyed virtually?
    - » Ability to zoom into specific areas of the body?
    - » Color correctness and/or contrast?
    - » Sound?
    - » Information transfer – (ie) vitals?
- Do you have/need power backup in case of power outages?
- Do you need the ability to easily re-boot telemedicine systems that may go down?

PROJECT MANAGEMENT & BUDGETING:

- How is the project being financed? Privately by physician? By the practice? By an insurance provider?
- What is the desired timing of the complete installation?
- Is there a cost associated with the desired completion timing to be aware of?
