

## PoE Auto-Recovery

Jennifer and Thomas Wagner just want to know their family is safe and can count on their security system—and that relies on a solid network. They know their security cameras are susceptible to falling offline, and while their installer comes out and fixes it quickly, they'd like an immediate resolution when it happens.

The Wagners expressed this concern to their installer, so he set them up with a Luxul managed switch, featuring PoE Auto-Recovery, on his next visit. PoE Auto-Recovery eliminates this problem by automatically rebooting PoE-connected devices when the switch loses communication with them, so the Wagners no longer have to worry about their PoE-connected devices dropping offline.

Make yourself the most valuable part of your clients' security systems by offering them complete reliability in their system with PoE Auto-Recovery, and as an added bonus, roll fewer trucks each month for service calls!

Available on all current PoE managed switches  
except XFS-1816P & XMS-1010P

## PoE Power-Scheduling

Mark Jenkins, owner of Grounds Zero Coffee, is always looking for a good way to have a smaller impact on the environment. Since using electrical power when it's unnecessary is bad for the environment, Mark set out to find solutions that would help them cut back on their electrical usage.

After Mark shared this goal with his installer, his installer set the shop up with a Luxul managed network switch, featuring PoE Power-Scheduling, which enables him to set schedules on end users' switches to power down PoE-connected devices, like access points and control panels, when they aren't in use.

Now, Grounds Zero Coffee is having less impact on the environment and will never worry about PoE-devices being left on when they're not there to use them. Set yourself apart by offering your clients the ultimate personalization of their systems—right down to the last detail, scheduling when their devices are powered on.

Available on all current PoE managed switches  
except XFS-1816P & XMS-1010P
