

7/22/25

Dear Baltimore City DOT. The 1400 block of Riverside Ave. has been experiencing severe speeding for some time. This is the last block (southbound one way) before a traffic light at E. Fort. Ave. It seems people accelerate to catch the light and it feels like they are doing at least 40 MPH. A speed hump mid block would help immensely keeping speeds at a reasonable level. And since there is a traffic light at the end of the block, it would seem that traffic flow would not be impacted.
