Progress Note

DIAGNOSTIC RESULTS

Parvo SNAP: negative

TREATMENTS/ HOSPITALIZATION PLAN

None

MEDICATIONS TO GO HOME

None

CUSTOMER COMMUNICATION

Spoke with owner about history and physical exam findings. Expressed concern for gastroenteritis vs foreign body obstruction vs pancreatitis vs infection vs other for causes of prolonged vomiting and diarrhea. Recommended full diagnostics, including bloodwork and radiographs, with the understanding that a new treatment plan will be presented once we have more information. Explained that the goal would be to rule out some of the more scary differentials to then hopefully treat symptomatically at home. Provided owner with estimate for diagnostic and treatment plan.

Owner left hospital without any treatments or notifying the doctor.

8:46pm Text: Hi this is Dr. Martin. I would definitely recommend having Milo evaluated by a veterinarian as soon as possible given the potential that he ingested foreign material. I am very worried that he could decline quickly at home. I will email along a list of local primary care veterinarians where care is expected to be much cheaper than in the ER.
