

**COMPLETED**

I'm still seeing signs of mouse activity in the apartment, and unfortunately the traps set up by pest control do not seem to be working at all. Besides the traps they placed, I have also set up around 30+ traps myself, but none of them have been effective so far. At this point, I'm concerned that the current treatment is not enough. Could you please arrange for pest control to come again and perform a more thorough and effective treatment? I have also identified several potential entry points that I believe need to be properly sealed, including:

- gaps around the floor vent/grate
- a huge opening around the pipes
- holes/gaps near the apartment

door

Could maintenance please come and properly block/seal these areas as soon as possible?
