

According to the American Cancer Society, breast cancer is the second leading cause of cancer death and the second most common type of cancer among women in the U.S. The greatest risk factor in developing breast cancer is age.

Breast cancer incidence rates have increased drastically in Putnam and St. Johns Counties. Only Nassau County has a rate below the state level of 21 per 100,000. 34% of women delayed obtaining a mammogram. *Source: Community Health Needs Assessment, 2012*

FY13-14-15 Community Benefit

Mammography

The Healthy People 2020 national health targets focus on reducing the female death rate from breast cancer to 20.6 deaths per 100,000 females, and increase to 81.1% the proportion of women who receive breast cancer screening based on recent guidelines.

Programs:

- Health education
- Community outreach and prevention awareness events
- Strategic Investments

Strategies:

1. Provide community education on early detection of breast cancer and breast health for high-risk women.
2. Provide breast health information literature at community health fairs and other community health events.

Program Results:

FY13

- 126 people received information on breast cancer and breast health

FY14

- Over 120 people received information on breast cancer and breast health
- 40 people attended class on breast cancer early detection
- 82 people received Buddy Check packets and information on free mammography at health fairs

FY15

- 110 women were educated on the importance of prevention in breast cancer
- 42 people received Buddy Check 12 packets

Strategic Investments:

FY13

- Sulzbacher Clinic Beaches provided screening mammograms and breast health education

FY14

- Sulzbacher Clinic Beaches provided 239 women with screening mammograms. 32 women received follow up treatment

FY15

- Sulzbacher Beaches Clinic screened 291 women. All 291 women received education on breast cancer. 26 women received follow-up treatment.

Partners:

- Beach Senior Center
- Sulzbacher Clinic Beaches
