

Baptist Rehabilitation Lymphedema Therapy

Baptist Rehabilitation offers evaluation and treatment of lymphedema patients by Certified Lymphedema Therapists (CLTs) to reduce and control the amount of swelling in the affected limb(s), restore function and improve quality of life.

After a comprehensive evaluation, our occupational and physical therapists perform Complete Decongestive Therapy (CDT) to reduce lymphatic volume in the affected extremity. CDT incorporates Manual Lymph Drainage (MLD), compression therapy, decongestive exercises, and skin care.

Program Highlights:

- One-on-one treatment with a Certified Lymphedema Therapist (CLT)
- Non-invasive Complete Decongestive Therapy (CDT) - the gold standard for lymphedema treatment and management
- Individualized plan of care to best suit patient needs
- Three convenient locations across Northeast Florida

Contraindications for Lymphedema Treatment:

Patients are not candidates for lymphedema therapy and CDT if they exhibit any of the following:

- Uncompensated cardiac disease, including CHF
- Uncompensated or end-stage renal disease
- Current DVT
- Active infection

Who to Refer:

- Patients with Primary Lymphedema (inherited disorder leading to insufficiency of lymph vessels), such as those with Milroy's Disease or Meige's Disease
- Patients with Secondary Lymphedema (caused by other conditions or surgical procedures), such as lymphedema caused by the treatment of cancer

How to refer:

Send referral to Baptist Rehabilitation and indicate "OT/PT to evaluate and treat for lymphedema management."

Include date, patient's name, diagnosis code(s), and the ordering physician's dated/timed signature.

Lower extremity lymphedema patients must have Ankle-Brachial Pressure Index (ABI) results within the last 3 months indicating they are safe for complete decongestive therapy prior to evaluations being scheduled.
