# AHV BOOSTER EQO

Promotes feed intake and the animal's metabolism in the liver and rumen, and provides sustained or fast additional energy.

## ISSUE AND OBSERVATION

Every biological reaction in the body requires energy. Specific organs and systems use a large proportion of available energy for maintenance; the process of being able to function on a base level (i.e., a healthy, normal state). In the case of young stock, additional energy is especially necessary to, among others, develop all organs and grow. Adult production animals often require additional energy to perform above maintenance level. There is a strong correlation between feed intake and available energy.

## IMPLICATIONS

The body allocates and reallocates energy to where it is most needed (i.e., prioritizing it to maintain or start the most critical processes, which can be a struggle with energy allocation due to (production) predisposition of the animal).

This also means, that if energy allocation is moved to secondary/reactive systems like the immune system, or is simply missing, other processes and therewith (milk) production and/or growth, are compromised as a result.

## PRODUCT | WORKING MECHANISM AND MODE OF ACTION

The AHV Booster Tablet EQO has been developed to provide fast energy and stable rumen/blood pH to cows and calves. For this, it relies on a blend of carefully selected, high quality, highly bioavailable and buffering components.

FEATURE	BENEFIT
◆ EQO	Fit for organic use
◆ Vitamin B3, Vitamin B-complex and B12	Immune system, energy metabolism and liver function support
◆ Betaine	Hydration support
◆ Dextrose, lactose	Highly digestible energy sources
◆ Inulin	Prebiotic function, support energy utilization
◆ Yeast	Digestive support
◆ Tablet	Easy application for proactive approach
◆ Palatable product	Low stress, good (voluntary) uptake
◆ Natural product	With AHV the quality of the milk is not impacted, and cows remain in production, no separation of animals, no withdrawal period applicable

## PRODUCT | APPLICATION

AHV Booster Tablet EQO can be applied orally. Regurgitating feed boluses may impair tablet administration. Wait for the feed bolus to be (re)swallowed or allow the cow to stand 15 minutes prior to applying the product.

## PRODUCT | DOSAGE AND PACKAGING

AHV Booster Tablet EQO is available per branded box of 10 individually packed pieces.

	<b>Energy replenishment (proactive)</b> <i>As part of the Transition or Energy &amp; Metabolism or Udder Health Programs</i>	<b>Energy replenishment (reactive)</b> <i>As part of the Transition or Energy &amp; Metabolism Programs</i>	<b>Enabling detectable heat (expression)</b> <i>As part of the Energy &amp; Metabolism Program</i>
	<b>AHV Booster Tablet EQO</b>		
<b>DAIRY COWS</b>	Max. 1 Tablet per animal once	Max. 1 Tablet per animal once	Max. 1 Tablet per animal once

### OBSERVATION ON ANIMAL LEVEL

Applying AHV Booster Tablet EQO results in active, lively and vigorous animals that maintain their desired health status and therefore growth and production levels.

### CUSTOM SUPPORT AND PROTOCOLS

AHV Booster Tablet EQO is part of several AHV programs and their products to support Udder Health, Uterine Health, Energy & Metabolism and Transition.

### NOTES
