General Information

Description

Designed with the new Revit user in mind, this class we dedicate to familiarizing the new user with Revit at an introductory level; you will learn the basic commands and tools that will allow you to get a jump start on your designs. Whether you are an Architect, Engineer or Contractor you will class an essential tool for understanding the core concepts of Revit.

Learning Objectives

- Become familiar with the concepts and benefits of Building Information Modeling.
- Understand the fundamental concepts and features of Autodesk Revit software
- Use the Parametric 3D design tools to start designing projects.
- Use the automated tools for project documentation.
- Develop an initial level of comfort and confidence with Autodesk Revit through hands-on experience.
- Know how to use Revit in a typical workflow project workflow

Prerequisites

No previous CAD experience is necessary. However, you should have a working knowledge of your profession (architecture, engineering or construction).
