Multiple Choice Questions

Chapter 14: The Practice of Simulation

1. Once a simulation model has been developed and used it should be:

   a. Thrown-away
   b. Reused for another project
   c. Used for operational decision-making
   d. Could be all of the above

2. When a model is developed without detailed input from the eventual model user, with a view to creating a representation of the real world, this is described as:

   a. Simulation as software engineering
   b. Simulation as a process of organisational change
   c. Simulation as facilitation
   d. Simulation as animation

3. When a model is developed and used in a group, with a view to promoting discussion around a real world problem, this is described as:

   a. Simulation as software engineering
   b. Simulation as a process of organisational change
   c. Simulation as facilitation
   d. Simulation as animation
