Managing Information in Organizations

Sharon A Cox

Chapter 6 Information Management Strategy

Link 6.4 Answers to Cloze Exercise 6.1

An information <u>MANAGEMENT</u> strategy demonstrates the organization's <u>COMMITMENT</u> to improving the quality and accessibility of information in the organization. The strategy defines the <u>VISION</u> and specifies <u>TARGETS</u> for improving information management, establishing a framework of <u>POLICIES</u>, controls, and procedures to manage information throughout the <u>LIFE CYCLE</u>. The strategy <u>JUSTIFIES</u> the required investment in information and demonstrates that poor information management may lead to <u>LEGAL</u> penalties and loss of custom. Business <u>BENEFITS</u> of information management may be tangible such as <u>COST</u> savings or intangible such as improvements to decision-making and customer service. The information <u>SYSTEMS</u> strategy provides the information processes to manage information in accordance with the information management strategy.

Formulating a strategy requires <u>PRACTICAL</u> support from senior management and <u>COLLABORATION</u> from interdepartmental teams. An <u>ASSESSMENT</u> of the current situation with regard to information management is needed to identify the specific information management <u>PROBLEMS</u> in the organization. An information <u>AUDIT</u> can then be undertaken to identify existing information resources available and the information that the organization requires. There are four complementary approaches to conducting an audit; these are strategic, <u>PROCESS</u>-based, resource-based, and actor-based. The results of the information audit can be used to populate the data <u>DICTIONARY</u> and create the information <u>ARCHITECTURE</u>.

Barriers hindering implementation of the information management strategy are likely to be <u>RESOURCE</u>-based, culture-based, or fear-based. Barriers to implementing the strategy can be addressed by organizational commitment, intraorganizational collaboration, <u>COMMUNICATION</u> strategy, and by focusing the <u>STRATEGY</u> on practical issues. The progress of implementing the strategy can be reported using <u>QUANTITATIVE</u> measures such as the number of data owners appointed. The impact of the strategy is evaluated using meaningful <u>PERFORMANCE</u> measures defined in the information management strategy. Formulating and implementing an information management are <u>CONTINUOUS</u> processes responding to the changing information needs of the organization.
