

Eric:	Y' doing anything on <u>Sat</u> 'day?	Pre-invitation – orients to preference issue in response to upcoming invitation, could avoid doing an invitation that would receive a dispreferred response.
Jeff:	U:hm <u>why</u> ?	Hedging response – orients to possible preference problem in producing the response to the invitation, but doesn't preclude acceptance.
Eric:	I was thinking we c'd go over to <u>Kenton</u> for l:unch.	Telling FPP = projected invitation
Jeff:	Oh <u>Kenton</u> ,	Telling SPP = acknowledgement of telling
	yih mean the <u>pub</u> there?	Repair initiator = deals with problem of reference in Eric's telling. Repair may orient to upcoming dispreferred, by delaying response to the invitation.
Eric:	<u>Yeah</u> .	Repair
		Dispreferred response – Jeff delays production of response to invitation by prefacing it with:
	(0.2)	Pause
Jeff:	.hh	Audible in-breathing
	Well,	Delaying device - works to alert the recipient to an up-coming action that is not straightforward and/or dispreferred
	hh.	Audible out-breathing
	yih know,	Hedging
	I'd like tuh b't	Pro forma acceptance + but
	i's a bit hh. u-last <u>minute</u>	Warrant 1 – timing of invitation is a problem (short notice)
	an' like I've <u>already</u> said tuh <u>Sal</u> tha' we'd go over to her <u>mum</u> 's f' lunch.	Warrant 2 – previous commitment preventing acceptance.

	So:: per'aps an <u>o</u> ther time?	Mitigated declining of invitation and orienting to willingness to do the proposed activity at another time
Eric:	Oh. okay then,	Acceptance of rejection – SCT
	per'aps <u>n</u> ex' week.	New invitation
Jeff:	Yeah thad'd w <u>o</u> :rk.	Acceptance = preferred response, no delays, full acceptance.
