PRESS RELEASE

Oslo, November 2026

BREDENGEN APPOINTED ANRITSU DISTRIBUTOR IN NORWAY

From 1 January 2027, Bredengen will become the Norwegian distributor of Anritsu test and measurement equipment, taking over the agency and training activities previously handled by Blomkvist AS. The transition ensures continuity for Anritsu customers in Norway and builds on decades of experience and in-depth technical expertise.

Anritsu is a Japanese manufacturer of test and measurement equipment for the telecom, fibre and radio industries. For 41 years, Blomkvist AS has represented Anritsu in Norway, building extensive expertise in both the products and user training. As Morten Blomkvist steps back, Bredengen will take over the agency and training activities and build on the market knowledge he has developed. Existing and new Anritsu customers will therefore continue to have a Norwegian partner with in-depth knowledge of the instruments, their applications and the market.

“Many of our customers build and operate fibre and radio networks and depend on reliable test equipment. With Anritsu, we can offer the complete chain, from components and cables to the instruments that verify the network is performing as intended,” says Trine Ramsland, Managing Director of Bredengen.

Long-term partnerships have been part of Bredengen’s history throughout its 100 years. The company supplies solutions for TV distribution, fibre and broadband, and its partnership with HUBER+SUHNER dates back almost 90 years. Anritsu now complements the product range with test and measurement equipment for installation, troubleshooting and operation.

Continued training and expertise
Training courses on Anritsu instruments will continue. Morten Blomkvist will lead the course on 26 November, and from 2027 Bredengen will take over the training programme and offer new courses. Customers will thus retain access to products, expertise and training.
