SAFETY. SINCE 1898.™

A simple solution to safety, welfare, and hygiene on scene!

The recognition of carcinogens remaining on personal protective equipment (PPE) has resulted in a structured cleaning approach for potentially contaminated kit in Fire and Rescue Services but what about the person wearing this PPE?

Global studies have demonstrated that fire fighters are facing the risk to develop cancer. If there is continuous exposure through a failure to properly clean off contaminants the risk is even higher.

The Better After Fire Wipe is for use on scene.

The Better After Fire Wipe will help to reduce the risk and the dirt from the wrists and hands, face, ears, jaw as well as areas around the neck and throat. In addition, it can be used for wiping other contaminated areas after an event.

The Better After Fire Wipe comes in two packaging units: a box of 20 individually packed single wipes or a multi dispenser of 40 wipes. The wipes are 100% biodegradable – so you can be clean and green.

Reduces impurities and cleanses without drying out the skin.
