

Your partner for training and emergency - part 1 Onsite and online: Bullard's TI-Training

Firefighters need to stay fit. This not only applies to their own physical condition – after all, if you want to save lives and remain unharmed, you also need to master all the important procedures and processes in the field. The key: professional and realistic training.

Bullard's QXT Thermal Imager is regularly used when the emergency is being rehearsed in Ense, North Rhine-Westphalia, and the flames are blazing in the Bullard Fire Training Camp fire container. "The thermal imaging camera fits perfectly in the hand and provides the clear images that are so enormously important for assessing the situation," says Thomas Meier, co-owner of the recently opened local training center.

The Northern FireFighting Training Center (N.F.T.C.) in Bad Zwischenahn, Lower Saxony, will also be equipped with the QXT. In addition, the Bullard H3000 Series firefighter helmets are also in use. In the facility's smoke ignition system – one of the largest of its kind in northern Germany – firefighters can practice various extinguishing techniques, for example, and thus prepare for an emergency under realistic conditions. And under the guidance of Chief Instructor Matthias Riedel, firefighters train just as hard in the Boeing 747 fire simulator at the Fire Training training center at Leipzig Halle airport as in the lumber lighted fire container and on the 50-meter respiratory protection range.

And what if training on-site is not possible? The National Fire Brigade Association of Rhineland-Palatinate will expand existing training opportunities with digital offerings. Bullard also strives to improve your safety in everyday life, contributing with innovative solutions. For Bullard, it is consistent to support the entire range of options with which you can prepare for deployment – whether on-site or independent of location. After all, our products can only show their strengths to the fullest if you are able to prepare yourself in time to use them properly.

At Bullard, you not only get the right tool, but you also learn how to use it. We are fortunate to have such supportive partners that keep you connected with Bullard.
