Issuing Cards at the Speed of Simple

EMBRACING INTEGRATIONS FOR A ONE-CLICK SOLUTION

Say Goodbye to Card Issuance Hassles

And hello to HID® FARGO® Connect™! Tired of switching between multiple applications to onboard and issue ID cards to employees, students and healthcare professionals? If so, you've come to the right place.

HID FARGO Connect eliminates the numerous complications of the traditional onboarding process by partnering with best-in-class technology providers. Seamless integration with popular and trusted access control and university One Card solutions — such as HID SAFE™, CBORD®, Software House C-Cure 9000,

Atrium and others — simplifies the operation and support of the entire ID card issuance office, all while increasing control and security.

The result is a streamlined process for issuing ID cards right from within the technology partner solution of your choice. Card issuers are no longer burdened with toggling between multiple applications to onboard and print ID cards. With HID FARGO Connect, it only takes one click!

Tired of Routine Software Updates That Interrupt the Card Issuance Process?

Unlike other integrated or standalone card issuance software solutions, HID FARGO Connect lets you issue cards from anywhere, using any device, without having to install any additional software — not even a printer driver — eliminating those painful and time-consuming Windows® updates. This fully hosted or on-prem, cloud-based card issuance platform also simplifies the complexity of remote issuance by enabling you to send print jobs safely and securely to remote locations without having to keep printers in a locked room or to physically mail cards to remote locations — effectively saving tens of thousands in shipping costs.

Want Contactless Card Issuance to Be More Contactless?
Try Inline Personalization.

No longer a novelty, contactless smart cards are now a large part of daily life on college and corporate campuses. While the cards themselves have become smarter, the process to issue them has remained complex and challenging due to outdated manual processes. These archaic processes generally begin with the use of a desktop card printer to print personal cardholder data on the outside of the card. The card is then picked up from the printer's output tray for the next step, where the operator manually types the pre-printed/pre-programmed card number into the door access or student management solution from a desktop computer. Multiple steps through multiple applications equal multiple hassles.

Moving to an integrated one-wire inline personalization process with HID FARGO Connect enables organizations to move away from this outdated, two-step process by allowing cards to be personalized inside and out in one seamless step. Because HID FARGO Connect is tightly integrated with door access and student management solutions, cardholder records are automatically updated with smart card details without manual data entry — regardless if issuance is initiated locally or remotely. HID FARGO Connect transforms what were once many cumbersome, error-prone, manual steps into a truly automated, one-click process that works whether the printer is sitting right next to you or halfway around the world.
