

PVC FOAM & FLEECE LINED, FLUORESCENT 12" GAUNTLET GLOVE

Product Description

When choosing the best chemical resistant glove it is important to communicate with your chemical supplier and/or in house product safety specialist to ensure you are using the best available hand protection. Chemical resistant gloves are available in a variety of different coatings each engineered to resist degradation in certain chemicals and chemical concentrations over a period of exposure. Nitrile, latex, PVC, Neoprene and butyl rubbers are popular coatings used in the manufacturing process of chemical resistant gloves, and new blends are also being introduced to improve comfort and protection. Warning signs that your chemical resistant glove does not have satisfactory protection: discoloration, softening, swelling, detachment of coatings and blistering

Features

- 12" length provides additional protection - PVC is excellent for resisting oil and petrochemicals - Good anti-slip grip - High visibility orange PVC - Stays flexible in cold temperatures

SKU: PG012-FF

Chemical Resistant Gloves

Product Details
