For even more dazzling results, use with our line of marine fertilizers, Acadie!

Naturally rich in calcium, hen manure is both abundant and renewable. Known for its fertilizing properties, it enriches the soil and promotes plant growth.

Easy to use, just sprinkle and water. The granules dissolve upon contact with water. Nutrients are released with every rainfall and every watering.

This formulation, made of layer hen manure and bonemeal, stimulates rooting by promoting root formation. A must-have product when transplanting your plants and wanting to get off to a good start!
