Monitoring solutions to help preserve independence

Comfort Keepers monitoring solutions are designed meet the unique needs of each client. Helping our clients to live independently, and empowering them to remain active with on-the-go solutions, or engaging them in their healthcare with vitals monitoring and medication compliance, Comfort Keepers is always here to help.

Could Your Senior Benefit from Additional Assistance at Home?

Do you have questions about our team care approach?
Call and talk to a Care Coordinator today, who will be happy to answer all your questions.

Vitals monitoring

Managing chronic conditions is essential, and the simple connections and accountability with Comfort Keepers Clinical Team makes that possible. By sending regular readings to our team, clients can take control of their health with the backing of clinical support.

With a single touch of a button the vitals and data is transmitted to Comfort Keepers team and care center. If the system detects that vitals are out of the clients normal expectations, our care center contacts the Comfort Keepers Health Care Coordinator assigned to the client, to immediately to check status.

The Health Care Coordinator also contacts professionals for further triage as the main goal of using vitals monitoring system is to keep our clients out of hospital. If vitals data is not received in expected time frames, a reminder calls are made to remind users to use the device in order for their vitals to be monitored and the data to be sent to the Health Care Coordinator.
