Description:

A bus gate is a camera-enforced modal filter which allows buses to travel through. Bus gates improve bus journey times and reliability as most private vehicle traffic will no longer be using the road.

Advantages:

Bus gates improve bus journey times and reliability as most private vehicle traffic will no longer be able to pass through. Exemptions can also be granted to taxis and private hire vehicles.

Disadvantages:

Bus gates do not entirely remove traffic from a street and so there are fewer opportunities for placemaking.

Trial:

Bus gates can be trialled using low-cost temporary materials such as wooden planters. Cameras will need to be installed to make sure that the bus gate is enforceable.
