Appendix I Study Area
Appendix II Quantitative Need Assessment

## 1. Introduction

## Scope and Purpose

1.1 This report has been prepared by Avison Young ('AY') (formenty GVA) in a response to an instruction by Teignbridge District Council (TDC), East Devon District Council (EDDC), Mid Devon District Council (MDDC) and Exeter City Council (ECC) ('the Councils') to prepare a Town Centre and Retail Study ('the Study') for the Greater Exeter area. The Greater Exeter Strategic Plan (GESP) is being prepared in partnership with Devon County Council along with the District Councils. The study will provide essential evidence base information to assist the Councils in their preparation of the Greater Exeter Strategic Plan, as well as any Local Plansc urrently being prepared at the district level.

The Councils are working on an overall spatial strategy for the Greater Exeter area, with the GESP intended to be a statutory development plan document which sets out the strategic elements of a Local Plan. It will cover the period to 2040. The GESP is likely to provide:

- Vision and objectives for the GESP area;
- High-level strategies for housing, economic growth, transport and environmental themes;
- Development distribution;
- Policies for growth a reas a nd other functional areas;
- Large development allocations;
- Strategic infrastructure proposals;
- Common policies for certa in topics.
1.3 The Councils have recognised the importance of town centre and retailing issues being incorporated into the GESP a nd/or district Local Plans and this Study is intended to act as an evidence base document for the relevant elements of these plans.
1.4 This Study is being prepared in two parts, with the first part completed in September 2017. That element of the Study considered a number of factors including:
- A review of salient retail and town centre trends across the UK in order to set the context for developing a retail and town centre strategy in the GESP;
- A series of town centre health checks covering all of the main town centres in the MDDC, TDC and EDDC administrative areas;
- An updated survey of household shopping pattems covering an area which is suffic iently wide to gather data on convenience and comparison goods

This part of the Study provides an assessment of the quantitative and qualitative retail floorspace need for each of the main settlements in the ECC, EDDC, TDC and MDDC administrative areas. These settlements being:

- Exetercity
- East Devon: Honiton, Exmouth, Sidmouth, Seaton, Ottery St Mary and Axminster
- Mid Devon: Tiverton, Cullompton and Crediton.
- Teignbridge: Newton Abbot, Teignmouth, Dawlish, Ashburton, Bovey Tracey, Buckfastleigh and Chudleigh
1.6 This Study also provides recommendations regarding the retail land use strategy for the GESP, the threshold for the submission of impact assessments for retail land use proposals outside of defined 'town centre' areas in the GESP area and also recommendations regarding the varioustiers of the 'town centre' hierarchy in the GESP a rea.
1.7 The remainder of this document is structured in the following manner:
- Section 2 outlines the basis for the quantitative need forecasts, including the data sources and assumptions which have been adopted.
- In Section 3 we outline our assessment of the need for ClassA1 retail floorspace across the convenience and comparison goods sectors in each of the main settlements in each local authority area.
- Finally, we provide a summary of our findings in Section 4 and outline our recommended strategy for each town.
1.8 All plans and statistic al tables referred to in the text of this report can be found in appendicescontained at the rear of this document.

## 2. Basis for the Quantitative Need Assessment

## Introduction

2.1 This section of the Study outlines the various data sources and assumptions which have been adopted In order to prepare our quantitative need forecasts. Quantitative capacity forecasts are reliant on a series of data sources which are regularly updated in response to various factors including UK economic forecasts and the performance of retailers. The section coversthe following areas:

- Study a rea
- Population data
- Percapita retail expenditure forecasts
- Data on shopping pattems for convenience and comparison goods shopping
- Commitments for retail floorspace
- Benchmark tumover levels of existing and committed retail floorspace

## Study Area and Shopping Pattems Data

Given the scale of the combined administrative area of the four local authorities, the study area for this assessment is required to be necessarily large. The study area will need to capture shopping pattems associated with each of the main town centres and the average spending levels of those people who use these centres. A plan showing the extent of the study area is contained at AppendixI to this document.
2.3 The study area has been split into 39 separate zones in order to capture specific shopping pattems associated with individual settlements and the surrounding area and, for the larger settlements such as Exeter, specific shopping pattems across different parts of the city.
2.4 As set out in the first part of this Study, a survey of household shopping pattems has been undertaken in order to inform both this quantitative assessment and the town centre health checks. The survey has been structured to collect data on the following convenience and comparison shopping activities:

- First choice and other main food shopping destinations
- The most populartop-up food shopping destinations
- Clothing and fashion goods
- Fumiture, floor coverings a nd soft fumishings
- Household appliances
- Audio-visual goods
- DIY and hardware goods
- Health and beauty goods
- Books, CDs and DVDs
- Glassware, tableware and jewellery
- Recreation and luxury goods

The results of the household survey have been weighted against the age profile of each individual zone and have been summarised in Table 4 at Appendix II (for convenience goods shopping) and Table 6 at Appendix Il (for comparison goods shopping).

For the purposes of our assessment responses associated with special forms of trading (i.e. intemet shopping) along with 'don't know' and 'don't do' responses have been removed from the results and the market share data re-based.

## Timeframe for the Quantitative Assessment

.7 The timeframe for the GESP is up to 2040 and therefore our assessment has been framed to cover the period from the current year (2019) up to 2040. The February 2019 version of the NPPF indic ates that loc al authorities should "allocate a range of suitable sites in town centres to meet the scale and type of development likely to be needed, looking at least ten years ahead". Therefore, there is no compulsory requirement for this quantitative assessment to run all the way to 2040 although we have done so in order to provide some broad guid ance for the GESP a uthorities.

## Per Capita Retail Expenditure Data and Future Forecasts

New per capita retail expenditure data has been obtained from Experian. The data provided is set at a 2017 base level and has been projected forward based upon advice within Experian's Retail Planner Briefing Note 16, published in December 2018.

Per capita retail expenditure for convenience and comparison goods is shown in Tables 2a-2d at Appendix II.

## Commitments

2.14 Data on retail commitments have been sought from the GESP authorities and are shown in Table 8 b at Appendix II.

## Benchmark Tumover Levels

Within previous retail studies across parts of the GESP area two different approaches were taken for benchmark tumover levels for the convenience and comparison goods assessments. For convenience goods floorspace, it is common for the benchmark tumover of a selection of existing floorspace to be calculated using the existing net floorspace and company average sales densities for individual national multiple retailers and an assumed average for other convenience goods floorspace in defined 'town centres' and elsewhere. We rema in with this approach in this Study and have:

- updated the sales density information for named national multiple retailers using the latest research undertaken by Verdict and Mintel¹;
- updated the amount of floorspace within town centres using the latest survey information from Experian GOAD; and
- included data on new store openingssince the previous studies.
2.17 This updated assessment, along with the use of the new household survey, offers the opportunity to link back to the benchmark tumover for the town centre used previously. The exception to this is for settlements in Teignbridge as the previous retail study prepared for TDC did not provide capacity forecasts for individual settlements and therefore we have assumed that benchmark tumover is equal to current total tumover for the starting year of the assessment.

We now tum to the assessment of need foreach of the main settlements.

[^0]
## 3. Need Assessment

## Exeter

Within the 2016 Exeter and West End of East Devon Retail and Leisure Study, the level of quantitative capacity for net additional comparison goods floorspace was between 6,200 sq m and 11,000 sq m net at 2026 rising to between 24,300 sq net and 30,600 sq $m$ net at 2033. These forecasts took into account two large commitments at that time - IKEA and the city centre’s Bus and Coach Station ('BCS') - with the altemative scenario provided to estimate the impact of these two commitment, particularly the BCS site, to have an upwards impact upon the city's market share.

Table 10a at Appendix II to this report calculates the updated quantitative need for Exeter. It utilises the benchmark figure for the city in the 2016 study brought up to a 2019 base. In relation to commitments, the IKEA store remains as a commitment as it was completed and opened after the completion of the 2017 household survey. We have removed the commitment at the BCS site from our analysis as whilst it is technic ally still a commitment, this partic ular redevelopment scheme has effectively been abandoned. The analysis at Table 10a notes that the curent comparison goods tumover of the city ( $£ 1,001.2 \mathrm{~m}$ ) is now slightly below the benchmark tumover brought forward from the 2016 Study ( $£ 1,045 \mathrm{~m}$ ) and, along with commitments indicates a deficit of circa $£ 103 \mathrm{~m}$ in 2019. Growth in available expenditure is at such a level that the deficit remains at 2024 whilst surplus capacity is available at 2029 ( $£ 86.2 \mathrm{~m}$ or 14,281 sq m net). As noted in the previous section, forecasts beyond 2029 should not be treated as being particularly reliable.

There are two potential contrasting influences on the market share for Exeter going forwards across the assessment period. As set out in the 2016 assessment, the IKEA store has the potential to increase market share to the tune of $£ 30 \mathrm{~m}$. The second factor is the retail outlet centre planned for Junction 27 of the M5. Evidence provided by Lichfields at the recent Mid Devon EiP predicted a trade diversion of $£ 24 \mathrm{~m}$ from Exeter city centre (roughly equating to any gains which may have been made in connection with the IKEA store). The Mid Devon EiP inspector has subsequently concluded that a development of the nature proposed at Junction 27 could take place without any significant adverse impacts on the economic, social or environmental dimensions of sustainable development. Nevertheless, the impact of the retail outlet at Junction 27 will lead to a reduction in the amount of net additional comparison floorspace capacity in the city in the medium term.

Table 9a at Appendix II outlines our quantitative assessment of convenience goods floorspace capacity in Exeter. It indicates that at the present time relationship between demand for and supply of floorspace is generally in equilibrium with a small surplus of 886 sq $m$ net. This will rise to 2,991 sq $m$ net in 2024 and 5,483 sq m net in 2029. This can be compared with a forecast capacity of 993 sq $m$ net in 2026 and $1,966 \mathrm{sq} \mathrm{m}$ net in 2031 in the 2016 study. These sets of figures both exclude the Morisons supermarket commitment at the Middlemoor site. The increase in net additional capacity is mostly driven by the higher levels of population and house-building growth planned in the GESP and this suggests that a large proportion of this additional capacity should be considered for placement in planned new urban extensions within planned new local centres.

## Honiton

Table 9b at Appendix II outlines the level of convenience goods expenditure/floorspace capacity in Honiton. It indicates that, at 2019, existing stores have a tumover of $£ 57.4$ which can be compared against a benchmark tumover of $£ 61.2 \mathrm{~m}$. As a consequence, there is a small over-supply of floorspace at the current year which will not tum into a quantitative requirement for additional floorspace until 2029 (139sq m net). For comparison goods floorspace, Table 10b at Appendix II indicates that there is a small a mount of capacity at the curent year ( $£ 1.6 \mathrm{~m}$ ) which translates into a modest net additional capacity of 262 sq m net. Based upon growth in local population and percapita expenditure, this capacity risesto 576sq m net in 2024 and 1,227sq m net in 2029.

## Exmouth

Table 9c outlines the quantitative capacity for convenience goods floorspace in Exmouth. It shows that compared to benchmark tumover levels ( $£ 72.7 \mathrm{~m}$ ), existing stores have a very good level of performance ( $£ 86.7 \mathrm{~m}$ ). This leads to a capacity of $£ 14.0 \mathrm{~m}$ at 2019 which is equivalent to an indicative capacity of 1,163 sq $m$ net. Based upon a constant market share this level of capacity would rise at a modest rate to $1,354 \mathrm{sq} \mathrm{m}$ net in 2024 and 1,541sq m net in 2029. No allowance has been made for expenditure inflow in these estimates although spending by visitors to Exmouth would boost these estimates of capacity by a small a mount.

For comparison goods floorspace in Exmouth Ta ble 10c at Appendix II utilises the benchmark tumover figure for the town centre from the most recent retail study in East Devon and indicatesthat, based upon a current total tumover of $£ 60.5 \mathrm{~m}$ there is a small over-supply of floorspace ( -457 sq m net). This over-supply continues to 2024 and then a net additional capacity resumes at 2029, at 477sq m net.

## Sidmouth

Table 9d at Appendix II indicates that existing convenience goods stores in Sidmouth curently attract $£ 40.7 \mathrm{~m}$ of convenience goods expenditure. This is equivalent to a $2.6 \%$ market share across the study area. This is slightly below the benchmark tumover of existing stores of $£ 43.0 \mathrm{~m}$ leading to a curently small oversupply of floorspace of -196 sq $m$ net. Based upon a constant market share this over-supply will remain until 2029 with capacity only retuming at 2040. For comparison goods floorspace capacity Table 10d at Appendix Il shows that, based on the benchmark tumover for floorspace in Sidmouth being brought forward to a 2019 base, there is an indicative capacity for additional comparison goods floorspace of 1,371 sq m net at 2019. This level of capacity is generally equivalent to the level of assumed expenditure inflow which flows in to the town as a consequence of the high level of tourists/visitors (assumed to equivalent to $25 \%$ of study area expenditure in the town). Based upon a constant market share going forwards, this level of capacity will grow to 1,740 sq $m$ net at 2024 and 2,457sq m net at 2029.

## Seaton

Table 9e at Appendix II indicates that, based upon a constant market share, there will not be any surplus capacity to accommodate net additional convenience goods floorspace in Seaton up to 2040. This is primanily due to the relatively recent construction of the large Tesco store on the edge of the town centre. At present, convenience goods stores attract $£ 30.7 \mathrm{~m}$ of convenience goods expenditure from the study area which is lower that the estimated benchmark tumover of $£ 39.7 \mathrm{~m}$. When making these estimates, we
have made an allowance for some expenditure inflow in to Seaton from outside of the study area, at 10\% of study area derived expenditure. In contrast, Table 10e indicates a potential capacity for a modest amount of additional comparison goods floorspace in Seaton. Based upon the benchmark tumover level for the town used in the most recent East Devon retail study (brought forward to a 2019 base) Table 10e indicates the potential for an additional 157sq m net at 2019, rising to 229sq m net at 2024 and 423sq m net at 2029. These estimates are based upon a constant market share for the town across the assessment period but we do not consider that they are large enough to warrant any particular allocations / strategy for increasing floorspace in the town as any such gainscould be made via on-going chum in existing floorspace.

## Ottery St Mary

It is perhaps somewhat surprising that Table 9f at Appendix II is showing a surplus level of capacity for convenience goods floorspace in Ottery St Mary bearing in mind the relatively recent development of the Sainsburys store on the edge of the town centre. Table 9f shows that, excluding any expenditure inflow from outside of the study area, the town is attracting $£ 23.1 \mathrm{~m}$ of convenience goods expenditure which can be compared to a benchmark tumover of $£ 20.0 \mathrm{~m}$. This leads to an indic ative capacity of 258 sq m net at 2019, rising to 427sq m net in 2024 and 620sq $m$ net in 2029. Given the significant increase in retail offer that the Sainsburys store has brought we do not consider that there is a ny overiding need for a development plan strategy which seeks to materially expand convenience goods floorspace in town.

Table 10f also shows a potential surplus capacity for comparison goods floorspace in Ottery. This is based upon the benchmark tumover of the town in the most recent East Devon retail study being brought forward to a 2019 base and increased to allow for the addition of comparison goods element of the Sainsburys store ${ }^{2}$. Based upon a comparison goodstumover of $£ 14.6 \mathrm{~m}$ and no allowance for expenditure inflow, Table $10 f$ indicates a surplus level of expenditure of $£ 3.8 \mathrm{~m}$ which is equivalent to an indicative capacity of 638sq m net at 2019, rising to 977 sq $m$ net in 2024 and 1,530sq m net. Based upon the size of Ottery St Mary and its profile in the retail sector across East Devon we consider it unlikely that there will be commercial demand for this a mount of floorspace.

## Axminster

The final East Devon town in our assessment is Axminster. Table 9 g in Appendix II indicates that existing convenience goods stores attract $£ 21.4 \mathrm{~m}$ of expenditure which can be compared with a much higher benchmark tumover for these stores of $£ 42.7 \mathrm{~m}$. This suggests a signific ant over-supply of convenience goods floorspace in the town, to the tune of $-1,780 \mathrm{sq} \mathrm{m}$ net. The stores contributing to this situation are the two largest stores in the town centre - Tesco and the Co-op store on West Street - which are both trading well below their respective company average performance levels. Unsurprisingly, and based upon a constant market share over the assessment period, there will be no capacity for any net additional convenience goodsfloorspace in the town up to 2040.

In relation to comparison goods floorspace, Table 10 g indic ates that the current study area derived tumover of the town is higher than the benchmark tumover of the town (which has been brought forward from the most recent East Devon retail study and updated to a 2019 base level). This suggests an indicative capacity of 930sq m net at 2019, rising to $1,167 \mathrm{sq} \mathrm{m}$ net at 2024 and $1,546 \mathrm{sq} \mathrm{m}$ net at 2029. We do not consider that there is an overiding need to plan for this modest uplift in comparison goods floorspace in Axminster bearing

[^1]in mind the size of the town, the state of the comparison goods sector and the likelihood that any signific ant comparison goods in this part of Devon is likely to be directed towards Exeter.

## Tiverton

Tiverton is the largest of the three main town centres in Mid Devon District and Table 9h at Appendix II outlines the level of convenience good floorspace capacity in the town. It indicates that existing stores attract $£ 72.9 \mathrm{~m}$ of convenience goodsexpenditure from residents of the study area which can be compared against a benchmark tumover (at 2019) of $£ 79.0 \mathrm{~m}$. This suggests a small over-provision of convenience goodsfloorspace although the over-provision becomeslarger once the committed new Lidl foodstore to the south-east of the town centre is taken into account. Contributing to the curent over-provision of convenience goods floorsapce is the poor performance of convenience goods stores in Tiverton town centre, whilst the out of centre Morisons is trading well a bove its equivalent company average level. Based upon a constant market share over the assessment period, we do not forecast a need to plan for any new convenience goods floorspace in Tiverton.

Tuming now to comparison goods floorspace, Table 10h at Appendix II indicates that the total tumover potential of Tiverton ( $£ 68.5 \mathrm{~m}$ ) is slightly lower than the benchmark tumover ( $£ 67.9 \mathrm{~m}$ ) which has been brought forward from the most recent Mid Devon retail study. As a consequence, and also taking into account the committed comparison goods floorspace in Tiverton (including the recently approved Lidl scheme on the south-eastem edge of the town centre, Table 10h at Appendix II indicates a curent over-supply of comparison good floorspace in the town which is equivalent to circa $£ 7 \mathrm{~m}$ (orcirca $-1,200$ sq $m$ net). Based upon a constant market share the lack of capacity will remain until 2029 when there will be a modest surplus indic ative capacity of 780sq m net.

## Cullompton

Cullompton has experienced significant change in the past several years with the construction of the new Tesco supemarket and the conversion of the former Somerfield foodstore into Home Bargains and ALDI stores. As a consequence, there is limited capacity for net additional conditional convenience goods floorspace in Cullompton, with 390sq m net in 2019, rising to 711sq $m$ net in 2024 and 1,099sq $m$ net in 2029. We are aware that there are plans for a substantial expansion of the local community in the Cullompton area and therefore we recommend that any surplus capacity is directed to new local/district centres in these new communities.

In relation to comparison goods retail floorspace in Cullompton, Table 10i in Appendix II indicates a modest a mount of surplus capacity at the current year ( $£ 1.9 \mathrm{~m}$ ) which is equivalent to 314 sq m net. Based upon a constant market share over the assessment period net additional capacity will rise to 598sq met in 2024 and 1,105 sq $m$ net in 2029. This level of capacity is likely to be at the top end of expectations given the likely impact that the planned new retail outlet centre at Junction 27 of the M5 will have on local expenditure capacity.

Whilst opportunities for additional retail floorspace provision in the town centre should continue to be explored, it is likely that an element of this convenience and comparison goods surplus capacity should be directed towards the new garden village which is planned to the east of Cullompton and the M5 motorway
within a modest sized new local centre which complements the role and function of Cullompton town centre.

## Crediton

The final town in Mid Devon District subject to our quantitative capacity assessment is Crediton, located to the west of Exeter. Table 9j at Appendix II indicates that existing stores have a combined study a rea derived tumover of $£ 48.1 \mathrm{~m}$. This can be compared with the benchmark tumover of $£ 57.9 \mathrm{~m}$ and indicates a negative capacity of $-£ 9.8 \mathrm{~m}$. Contributing to this overall deficit in expenditure is a good trading performance for stores in the town centre and a noticeable under-performance for the larger Momisons and Tesco supermarkets located outside of the centre. Based upon a constant market share over the assessment period there will be no surplus capacity for a net increase in convenience goodsfloorspace in Crediton.

Table 10j outlines the level of forecast quantitative capacity for comparison goods floorspace in Crediton. Using the benchmark tumover for the town from the 2012 Mid Devon Retail Study brought forward to a 2019 base Table 10j shows demand versus supply to be broadly in equilibrium with a small over-provision of - $£ 0.2 \mathrm{~m}$. By 2024 a surplus capacity arises, at $£ 0.9 \mathrm{~m}$, which then rises further to $£ 3.5 \mathrm{~m}$ at 2029 . These figures are equivalent to an indicative capacity of 143 sq $m$ net and 574 sq $m$ net respectively.

## Newton Abbot

Newton Abbot is the largest settlement in Teignbridge District and Table 9k at Appendix II indicates that existing convenience goods stores in the town attract $£ 164.9 \mathrm{~m}$ of convenience goods expenditure. The three main contributors to this combined total tumover are the large ASDA, Sainsburys and Tesco supermarket with the ASDA store trading at $£ 51 \mathrm{~m}$, well above its company average of $£ 35 \mathrm{~m}$. When compared with the combined benchmark tumover of existing floorspace of $£ 144.2 \mathrm{~m}$ plus the tumover of the committed ALDI foodstore, Table 9 k indicates a modest level of surplus expenditure capacity of $£ 8.6 \mathrm{~m}$ which is equivalent to an indicative floorspace capacity of 716 sq m net at 2019. Based upon a constant market share over the assessment period, indicative floorspace capacity rises to 1,439 sq $m$ net in 2024 and 2,240 sq m net in 2029 .

Tuming to comparison goods floorspace, Table 10k at Appendix Il indicates that all floorspace across the town attracts $£ 186.6 \mathrm{~m}$ from the study area. Taking into account a modest level of additional expenditure inflow, Table 10k indicates that the total tumover potential of the town to be $£ 196 m$. As noted in Section 2 of this document, there are no benchmark tumover estimates from previous retail studies in Teignbridge District and therefore we have set the benchmark tumover at 2019 as the same as the total tumover potential of the town ( $£ 196 \mathrm{~m}$ ). Taking into account the comparison goods floorspace commitments associated with the new ADI store and the potential for a small amount of companison floorspace to be delivered at Wolborough Street, Table 10k indicates that there will be an indicative capacity for 1,410sq met by 2024 rising to $5,159 \mathrm{sq} \mathrm{m}$ by 2029. Whilst it is not the purpose of this partic ular study to assess sites to accommodate identified needs, we would recommend that the sites identified in the Newton Abbot masterplan ${ }^{3}$ are the focusfor providing new and redeveloped retail floorspace in the town.

[^2]
## Teignmouth

Table 9 l outlines our assessment of the likely quantitative capacity forecasts for Teignmouth, based upon a constant market share over the assessment period. It indicates that existing stores in the town attracts $£ 42.7 \mathrm{~m}$ of convenience goods expenditure from the study area and, taking into account a modest level of expenditure inflow ( $£ 2.1 \mathrm{~m}$ ), a total tumover potential of $£ 44.8 \mathrm{~m}$. When the data in Tables 5 a and 8a for Teignmouth are compared, it is evidence that most convenience goods floorspace in the town is trading below their respective company average levels apart of the out of centre Morisons store. On a combined basis, Table 9 indicates that the benchmark tumover of existing floorspace ( $£ 53.6 \mathrm{~m}$ ) is higher than their equivalent current total tumover potential ( $£ 44.8 \mathrm{~m}$ ) and thus showing that there is a current over-supply of convenience goods floorspace in Teignmouth ${ }^{4}$. Assuming that the town is able to maintain a reasonably constant market share over the assessment period, Table 91 indicates that the over-supply will remain and thus there will not be any quantitative capacity for net additional convenience goods floorspace up to 2040.

For comparison goods floorspace, Table 10 indicates that Teignmouth attracts $£ 12.6 \mathrm{~m}$ of expenditure from the study area. Our assessment also makes a modest allowance for expenditure inflow ( $10 \%$ of study area derived tumover), thus providing a total tumover potential of $£ 13.9 \mathrm{~m}$. This is equivalent to a $0.6 \%$ share of available comparison goods expenditure across the study area. Based upon this share remaining constant across the assessment period, Table 101 indicates that this would result in a modest level of net additional floorspace capacity of 49sq m net at 2024 and 205sq m net at 2029. Such levels of capacity are not, in our opinion, large enough to warrant a development plan strategy for retail land use allocations across Teignmouth.

## Dawlish

Convenience goods floorspace provision in Dawlish has experience considerable change in recent years following the construction of the out of centre Sainsburys supermarket which is now, by far, the largest store in the town. Table 9 m indicates that existing stores in Dawlish attract $£ 24.4 \mathrm{~m}$ of convenience goods expenditure from the study area and we have also allowed for a modest amount of additional expenditure inflow ( $10 \%$ of study area tumover) based upon the role and location of Dawlish as a popular visitor/tourist destination, providing a total tumover potential of $£ 26.9 \mathrm{~m}$. When compared with the combined benchmark tumover of existing stores, Table 9 m indicates that there is modest level of surplus expenditure capacity in the town, equivalent to $£ 1.7 \mathrm{~m}$. Based upon a constant market share across the assessment period, surplus expenditure capacity rises at a modest rate to $£ 2.8 \mathrm{~m}$ in 2024 and $£ 4.0 \mathrm{~m}$ in 2029. These levels of capacity are equivalent to 231sq $m$ net and 335sq m net respectively.

For comparison goods floorspace, Table 10 m indicates that Dawlish attracts $£ 10.6$ of expenditure from the study area and we have also, like the convenience goods assessment, allowed for expenditure inflow equivalent to $10 \%$ of study area derived tumover ( $£ 1.6 \mathrm{~m}$ ). This provides a total tumover potential for Dawlish of $£ 12.2 \mathrm{~m}$. This is equivalent to a $0.5 \%$ share of all available comparison goods expenditure in the study area and assuming that this share remains going forward then there will be a modest future capacity of 91 sq m net at 2024 and 301sq m net at 2029.

[^3]
## Ashburton, Bovey Tracey, Buc kfastleigh \& Chudleigh

3.27 The final four settlements in Teignbridge covered by our quantitative capacity assessment are Ashburton, Bovey Tracey, Buckfastleigh and Chudleigh. All are of a similar size and have similar characteristic s in terms of the type and scale of their retail floorspace provision. The capacity assessments for their convenience good floorspace provision are contained in Tables 9n-9q and indicate the following capacity levels:

- Ashburton: a reasonably static level of capacity of 189sq m net at 2019, rising to 193 sq m at 2024 a nd 195sq m net at 2029.
- Bovey Tracey: no capacity for net additional floorspace until after 2029 when there will be capacity for 62sq m net at 2040.
- Buc kfastleigh: a reasonably static level of capacity of 129sq m net at 2024 and 130 sq $m$ net at 2029.
- Chudleigh: capacity for 185 sq m net at 2024 rising to 205 sq m at 2029.

The equivalent levels of capacity for comparison goodsfloorspace in these four towns are as follows:

- Ashburton: 15 sq m at 2024 and 65 sq m at 2029.
- Bovey Tracey: 35sq m at 2024 and 118sq m at 2029.
- Buc kfastleigh: 15 sq m at 2024 and 58sq m at 2029.
- Chudleigh: 24sq m at 2024 and 73 sq m at 2029.

At such levels, there is no case for new retail floorspace allocations in these towns and any growth should be absorbed by existing retailers and/or the chum in retail properties as new retailers are attracted to the towns.

## 4. Summary and Recommended Retail / Town Centres Strategy

4.1 This report has been prepared by Avison Young ('AY') (formenly GVA) in a response to an instruction by Teignbridge District Council (TDC), East Devon District Council (EDDC), Mid Devon District Council (MDDC) and Exeter City Council (ECC) ('the Councils') to prepare a Town Centre and Retail Study ('the Study') for the Greater Exeter area. The Greater Exeter Strategic Plan (GESP) is being prepared in partnership with Devon County Council along with the District Councils. The study will provide essential evidence base information to assist the Councils in their preparation of Greater Exeter Strategic Plan, as well as any Local Plans curently being prepared at the district level.
4.2 This Study is being prepared in two parts, with the first part completed in September 2017. That element of the Study considered a number of factors including a review of salient retail and town centre trends across the UK in order to set the context for developing a retail and town centre strategy in the GESP; a series of town centre health checks covering all of the main town centres in the MDDC, TDC and EDDC administrative areas; and, an updated survey of household shopping pattems covering an area which is suffic iently wide to gather data on convenience and comparison goods.
4.3 This second part of the Study provides an assessment of the quantitative and qualitative retail floorspace need for convenience and comparison goods floorspace across the main settlements in ECC, TDC, MDDC and EDDC. It also, at the end of this section, provides advice on the thresholds for requiring and undertaking impact assessments for retail development proposals located outside of town centres, along with a high level recommend retail development strategy for the GESP area.

Tables 4.1 and 4.2 below provide a summary of the forecast levels of quantitative need forconvenience and comparison goods retail floorspace across the main settlements.

Ta ble 4.1: quantitative capacity for convenience goods floorspace in the GESP settlements (all figures given in squa re metres net sales area)

| Settlement | $\mathbf{2 0 1 9}$ | $\mathbf{2 0 2 4}$ | $\mathbf{2 0 2 9}$ |
| :--- | :---: | :---: | :---: |
| Exeter | 886 | 2,991 | 5,483 |
| Honiton | -320 | -94 | 139 |
| Exmouth | 1,163 | 1,354 | 1,541 |
| Sidmouth | -196 | -133 | -58 |
| Ottery St Mary | 258 | 427 | 620 |
| Seaton | -490 | -428 | -363 |
| Axminster | $-1,780$ | $-1,711$ | $-1,640$ |
| Tiverton | $-1,669$ | $-1,399$ | $-1,085$ |
| Cullompton | 390 | 711 | 1,099 |
| Crediton | -817 | -656 | -475 |
| Newton Abbot | 716 | 1,439 | 2,240 |
| Teignmouth | -735 | -650 | -554 |
| Dawlish | 140 | 231 | 335 |
| Ashburton | 189 | 193 | 195 |
| Bovey Tracey | -51 | -26 | 0 |
| Buckfastleigh | 126 | 129 | 130 |
| Chudleigh | 167 | 185 | 205 |

Table 4.2: quantitative capacity for comparison goodsfloorspace in the GESP settlements (all figures given in squa re metres net sales a rea)

| Settement | $\mathbf{2 0 1 9}$ | $\mathbf{2 0 2 4}$ | $\mathbf{2 0 2 9}$ |
| :--- | :---: | :---: | :---: |
| Exeter | $-17,096$ | $-7,156$ | 14,281 |
| Honiton | 262 | 576 | 1,227 |
| Exmouth | -457 | -220 | 477 |
| Sidmouth | 1,371 | 1,740 | 2,457 |
| Ottery St Mary | 637 | 977 | 1,530 |

| Ashburton | 0 | 15 | 65 |
| Bovey Tracey | 0 | 35 | 118 |
| Buckfastleigh | 0 | 15 | 58 |
| Chudleigh | 24 | 73 |  |

4.5 In relation to qualitative aspects of provision for convenience goods floorspace, the last 10-15 years has seen a significant amount of new foodstores being built across many of the towns in the GESP areas. In previous
retail and town centre studies opportunities for qualitative improvement in towns such as Ottery St Mary, Seaton, Cullompton, Teignmouth were identified but the provision of new supermarkets (such as Sainsburys in Ottery, Tesco and ALDI in Cullompton, Tesco in Seaton and Momisons in Teignmouth) has widened local choice and allowed food shopping trips to be clawed back. There has also been a significant expansion in medium sized foodstoresoperated by the German retailers ALDI and LidI. This follows a national trend and is certainly in evidence in the GESP area with new stores being built in Honiton, Cullompton, Exeter and Newton Abbot. Most of the main towns listed above now have at least one medium to large sized foodstore/supermarket and on a town-wide basis there are no longer material qualitative deficiencies across the GESP area. The four smallest settlements, Chudleigh, Buckfastleigh, Bovey Tracey and Ashburton are the exceptions but they are not large enough in terms of the town itself or its related catchment to support a large store. Therefore, whilst on face value it could be argued that there are opportunities for qualitative improvement in these towns, there is unlikely to be any market demand for large main food shops in the foreseeable future.

In relation to comparison goods provision, the GESP settlements generally fall into three categories in terms of the quality of provision and the likelihood of qualitative improvements being able to obtained in the foreseeable future. Exeter is clearly unique amongst the GESP settlements and has a very good quality of retail provision in both the city centre, in district centres and in out of centre locations. Consumer choice is high and the city centre has a very good trading performance. Based upon market conditions Exeter is the only settlement in the GESP which has any realistic potential to make further gains in the quality of comparison goods retail provision. However, even Exeter faces pressures in terms of market demand and sentiment with the abandonment of the redevelopment of the Bus and Coach Station site for a mixture of retail and leisure space. The next level of settlement includes Tiverton, Newton Abbot, Teignmouth, Honiton, Exmouth and Sidmouth. These centres generally have between 170-280 retail units and are able to attract and retain a mixture of national multiple and local independent retailers. The main pressures facing the quality of comparison goods retail provision in this level of centre are the ability to retain national multiple retailers and the emphasis here is on refurbishing and improving existing property. The final tier of centre comprises centres such as Dawlish, Ashburton, Bovey Tracey, Buckfastleigh, Chudleigh, Seaton, Ottery St Mary, Axminster, Cullompton and Crediton. These centres generally have less than 100 retail units and are dominated by local independent traders. These centres generally have a small and niche role for the companison goods sectors focusing upon specialist retailers and/or those associated with the tourism industry.

In relation to the strategy for retail floorspace provision across the GESP area, the quantitative need assessment indic ates there is not a need for a signific ant net increase in convenience goodsfloorspace. The two centres where the level of capacity is highest are Exeter and Newton Abbot. This is prima rily due to their existing role and function and also the level of likely planned house-building. In our view any needs for net additional convenience goods floorspace should be accommodated within planned new urban extensions where foodstores can help anchor new local or district centres and provide easily accessible retail provision. For comparison goods floorspace, the potential development of a large new retail outlet centre close to Junction 27 of the M5 motorway is likely to have an impact upon the levels of retail capacity across a large part of the GESP area. The levels of quantitative capacity outlined in Table 4.2 are based upon constant market share levels and the effect of the new retail outlet centre is likely to mean that many of these levels, particular for Exeter and the Mid Devon area will in fact be lower. The actual effect on quantitative
capacity levels will need to be properly measured when a detailed proposal comes forward and once the outlet has started to operate and reached a settled trading pattem we recommend that a new GESP household survey is commissioned for the purposes of a future version of this document. In our opinion, the only settlement which has the potential comparison goods sector growth is Exeter and its city centre should be identified as the focus for comparison goods shopping. Whilst the J unction 27 retail outlet centre is being identified in the Mid Devon Local Plan we would recommend that it is also referenced in the GESP retail and town centres strategy given its likely considerable influence over shopping pattems.

In relation to our recommendations to the town centre hierarchy across the GESP area we have taken into account the following factors when setting the various tiers: tumover levels, size of catchment, number of retail units and amount of floorspace. This results in four tiers which are set out below. We have suggested titles for each of the four tiers although these can be changed in order that they relate/match the wider settlement hierarchy in the GESP document.

Table 4.3: recommended 'town centre' hierarchy for the GESP a rea

| Tier | Centre | Retail Roorspace (sq m) |
| :---: | :---: | :---: |
| Major centre | Exeter | 120,700sq m |
| Core town centres | Newton Abbot | 57,600sq m |
|  | Exmouth | 33,000sq m |
|  | Tiverton | 29,000sq m |
|  | Sidmouth | 24,500sq m |
|  | Teignmouth | 24,300sq m |
|  | Honiton | 21,400sq m |
| Smaller centres | Seaton | 19,200sq m |
|  | Axminster | 14,600sq m |
|  | Cullompton | 13,800sq m |
|  | Dawlish | $12,800 \mathrm{sq}$ m |
|  | Ottery St Mary | 10,400sq m |
|  | Ashburton | 6,950sg m |
|  | Crediton | n/a |
| Minor centres | Bovey Tracey | 4,300sq m |
|  | Buckfastleigh | n/a |
|  | Chudleigh | n/a |

4.10 With regards to the wider strategy for the above town centres, these will need to take into account the findings of the Part 1 document in relation to retail and town centre trends along with the town centre health check assessment. They will also be guided by the assessments of shopping pattems and retail floorspace need contained in this doc ument. These strategies should also take into account the following trends and factors:

- Town centre strategies in the GESP area should recognise that the high street, and the retail sector as a whole, is subject to constant change. As a consequence, strategies should be fluid and flexible mechanisms which can adapt to change influenced by the performance of the national economy, the retail sector and local factors. Evidence base studies such as this one can provide data on historic trends but are a 'point in time' based upon the best available current economic forecasts. This should be recognised in how the content of the evidence base is used to guide strategies.
- The overarching town centres strategy for GESP centres is that a wider range of land uses will be key to ensuring that town centres remain relevant and vital. This is being recognised at a national level with the
removal of the requirement for defined primary and secondary retail frontages and town centre strategies should recognise that new uses, which may not be retail uses, which add to the health and attractiveness of a centre through the day and evening should be encouraged. This can be achieved in two ways. First, greater flexibility should be given to the range of land uses in centres where they do not damage the retail function of the centre. This will be through flexible development management policies in the GESP and/or other development plan documents. Second, renewed focus on assessing proposals for main town centre uses located outside of town centres. Every effort should be made to ensure that all reasonable opportunities to locate such uses in defined centres are explored.
- In order to offer the best possible opportunities to attract funding for new infrastructure and facilities in town centres, the main town centre strategies should develop specific projects and initiatives. Whilst such projects/initiatives may be better placed in other development plan documents, the GESP could set the tone for this approach to ensure that (A) town centres can capture funding, and (B) out of centre retail and leisure proposals can be properly assessed in terms of their impact on investment. It will also enable the public sector to make an objective assessment of the areas where it needs to take the lead in maintaining and enhancing town centre health.
- Finally, whilst a town centre strategy in a development plan document has a large part of play in shaping the future of our town centres, the strategy needs to link seamlessly with a wider economic strategy forcentres. This will include partnerships across the public and private sectors, promotion and management of events in town centres in orderto bring in additional visitors, and creating a single voice fora town centre.

Finally, in relation to the opportunity to set a local impact assessment threshold, it will be noted that the 2016 Exeter and West End of East Devon Retail and Leisure Study recommended a threshold of 500sq m gross for convenience and comparison goods floorspace proposals located outside of defined 'town centres'. Working on the basis that this recommendation is acceptable to ECC and the GESP authorities, consideration has been given to whether the same or altemative threshold should be set for the other main settlements covered by this study and also (A) smaller villages in the GESP area, and (B) a cross the rural area. When reaching a conclusion on these matters we have taken into account the scale of potential retail proposals in relation to the scale of town centres along with their role and function, along with the other factors outlined at paragraph 6.69 of the 2016 study. Taking these factors into account and also the strategy being adopted in similar areas, such as Wiltshire Council, we consider that there is a strong argument for the other main towns to attract a lower threshold which reflects their own characteristics. The core town centres, smaller centres and minor centres generally have a small average unit size (apart from the core retail areas / shopping centres) and many of these centres rely on retailers occupying smaller unit sizes for their overall health and attractiveness. A good example, particularly for the smaller centres, are foodstores/convenience stores of 200-300sq $m$ which provide an important function for their role and attractiveness. Proposals outside of town centre of a similar nature have the potential to affect this function and we consider should be carefully assessed. Therefore, we consider it proportionate for a threshold of 200sq m gross, alongside the 500sq m gross for Exeter, to be set for the other main settlements across the GESP and this should also a pply to proposals in the rural area.
