Please note the housing figures provided are only indicative of the potential supply of achievable housing land available, it makes no judgement on which sites are likely to be allocated or obtain planning permission. The development potential of individual sites may be affected by constraints such as biodiversity, conservation, protected trees, the presence of heritage assets etc. The UCS instead forms part of the evidence base to inform plan-making such as Local Plans. If sites are taken forward they will be subject to Strategic Plan preparation process.

A. Alphington

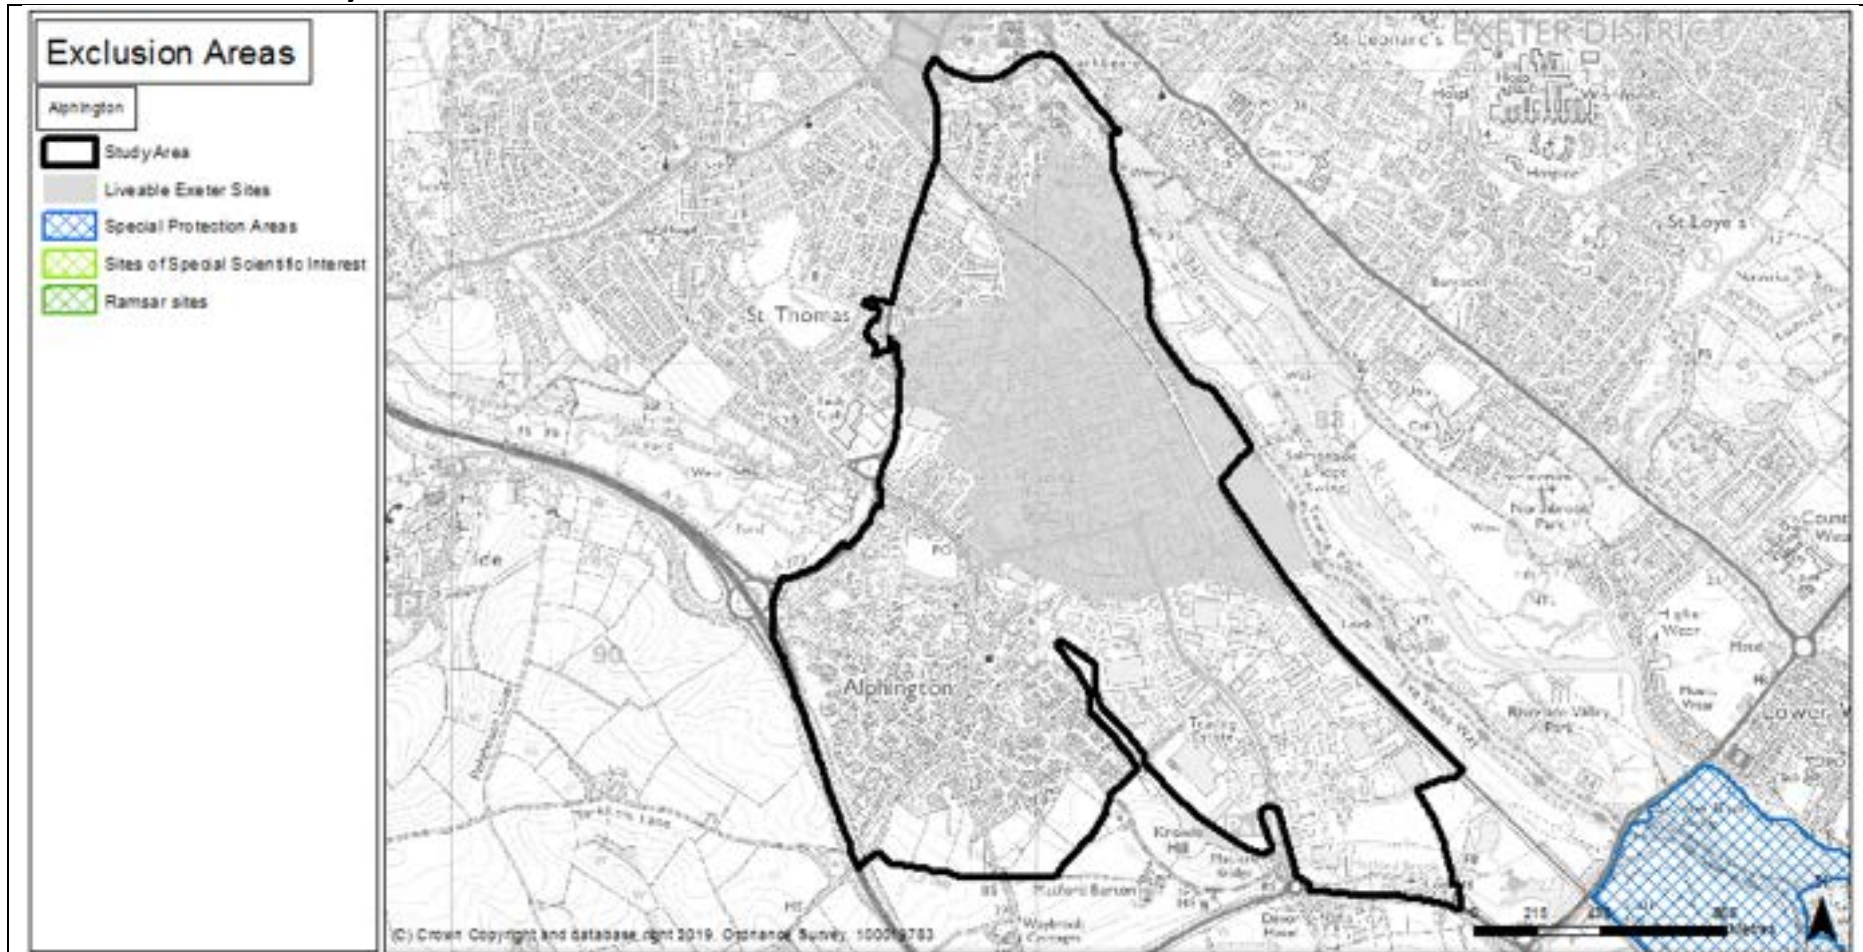

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

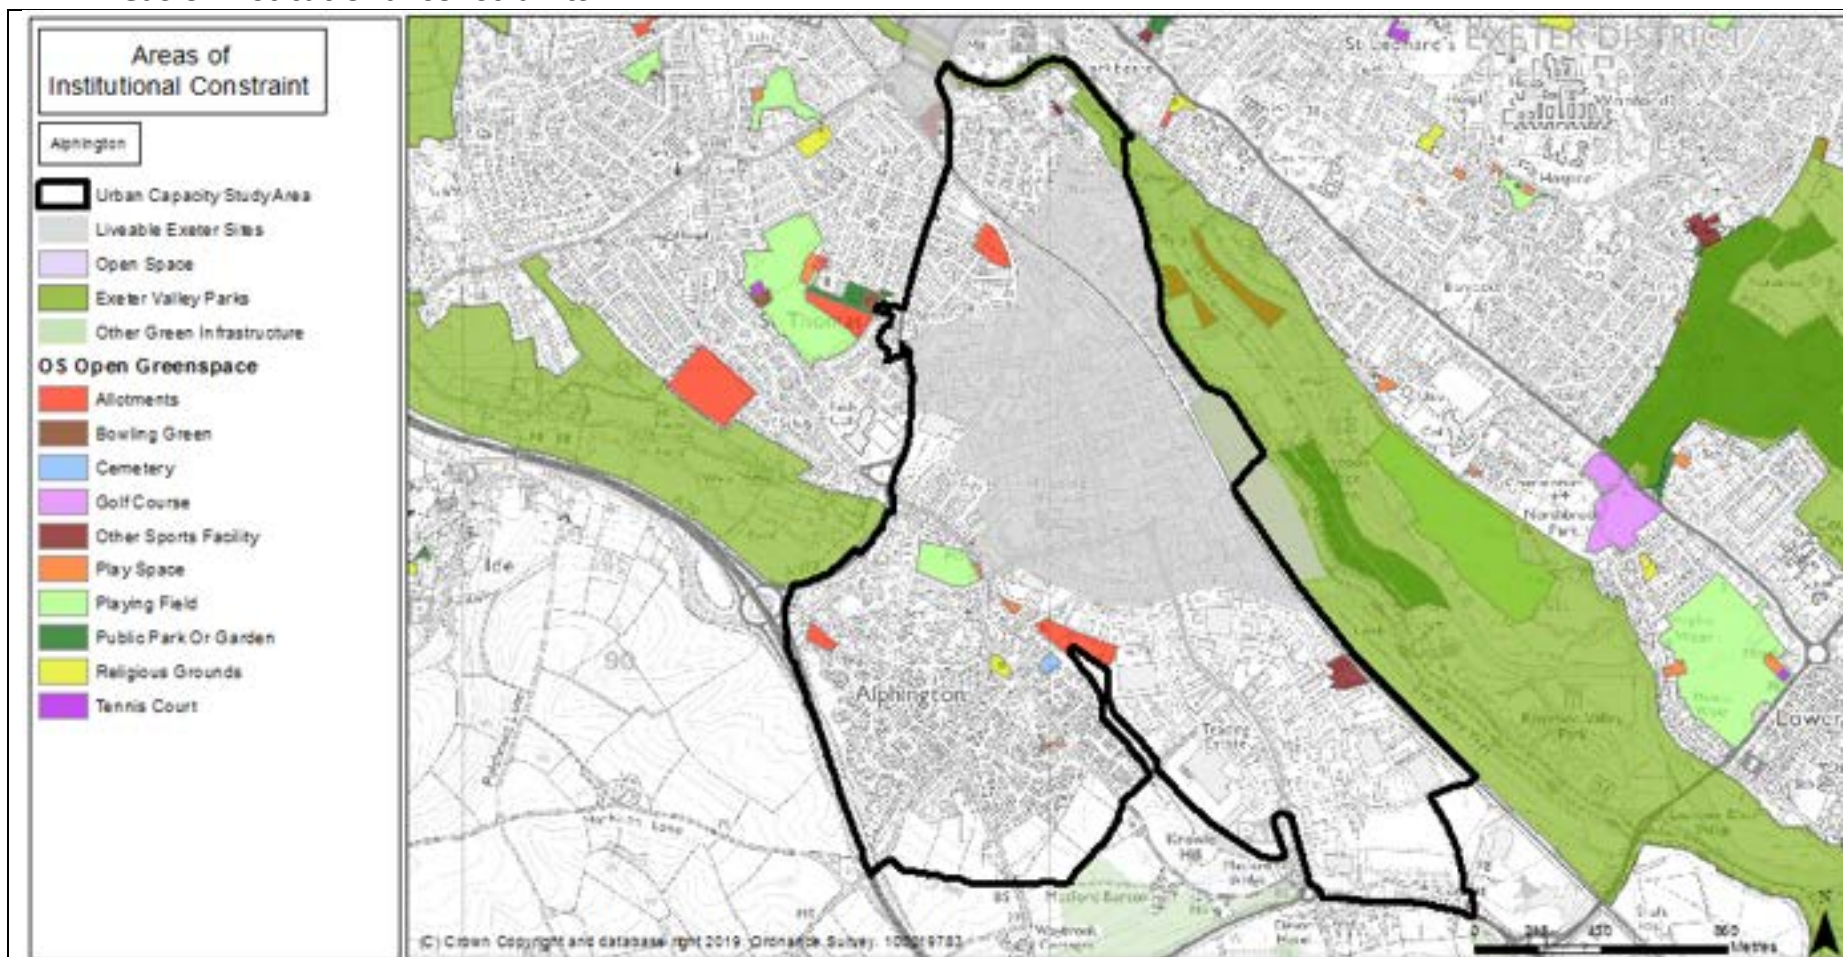

Notes: This assessment covers the area of Alphington. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into MSOAs within the existing urban area. Population around 7,400. Area approximately 360ha

1C – Areas of statutory exclusion

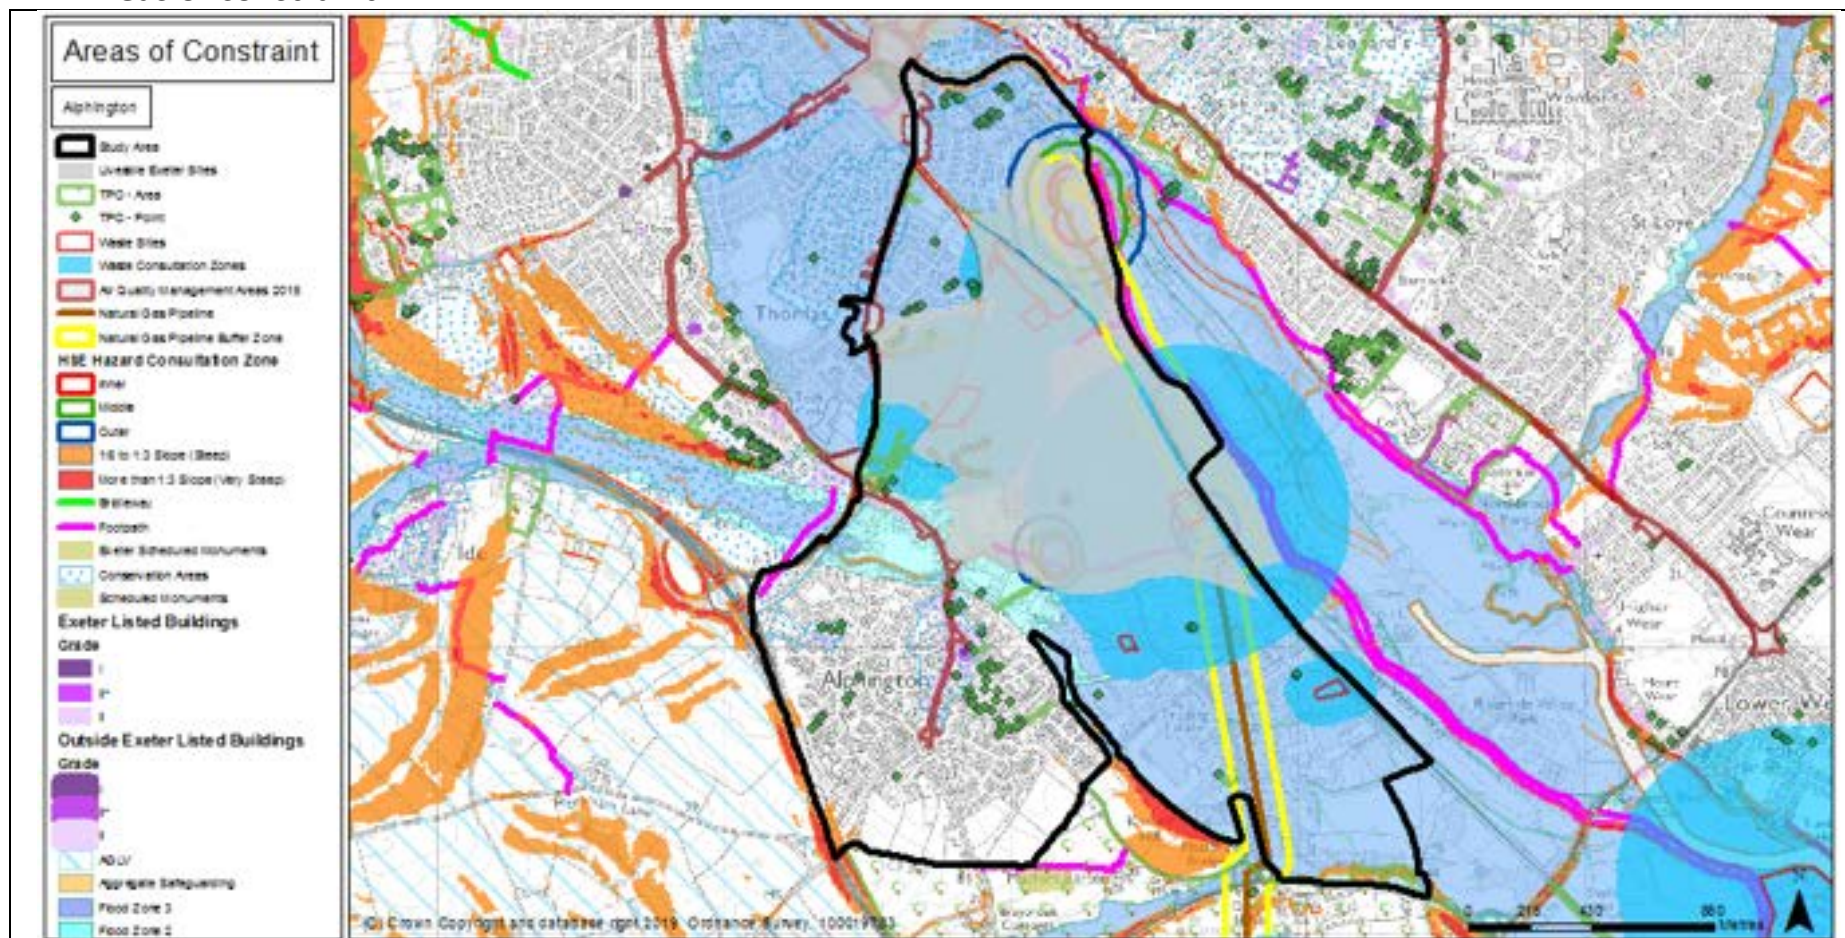

Notes: The study area also contains a Liveable Exeter Site, an area excluded from this assessment. No other statutory exclusion areas exist in the study area.

1D – Areas of institutional constraints

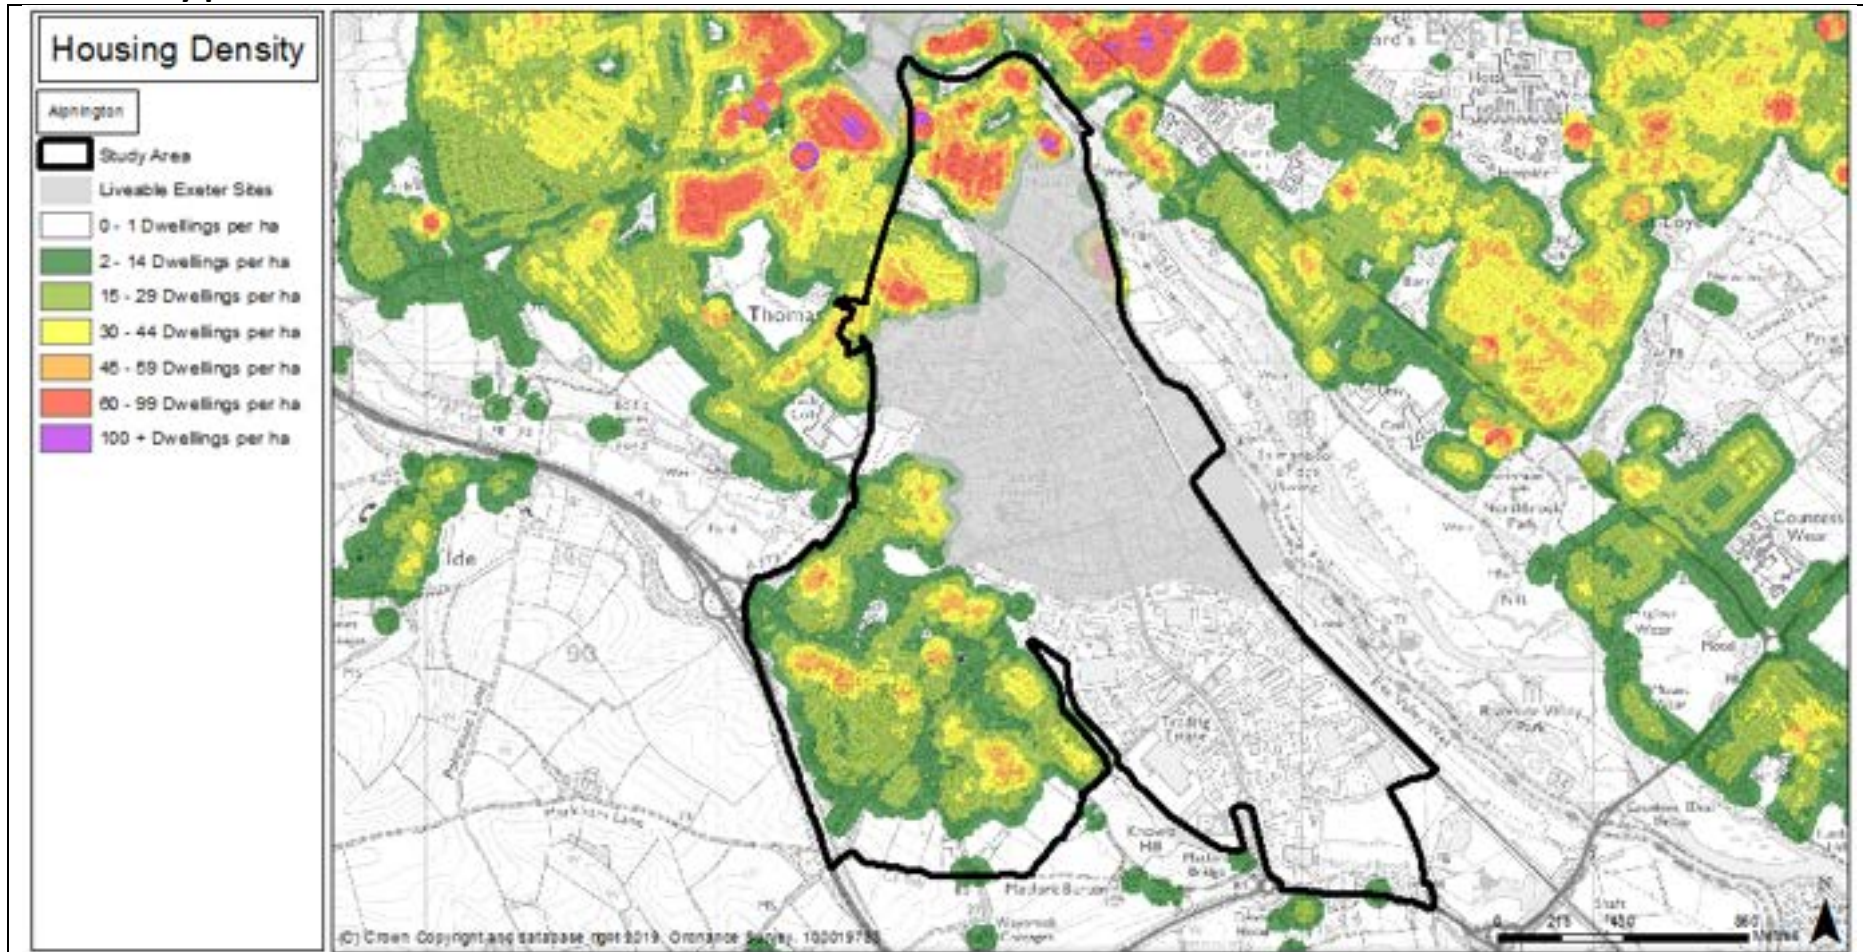

Notes: There are a number of different areas that derive a specific public benefit from community use, all of these will need to be taken into consideration during site identification and assessment. These include allotments, religious buildings, sports facilities (Alphington Cricket Club, BMX/Speedway), and play spaces. The study area also contains a Liveable Exeter Site, an area excluded from this assessment.

1E – Areas of constraint

Notes: A number of areas of constraint exist within the Alphington study area which may impact upon the deliverability of new housing. A large proportion of this study area is within Flood Zone 2 and 3. Other areas of constraints include: five conservation areas: Riverside, Princes Square, Alphinbrook, Midway Terrace and Ide lane, and Alphington, a number of tree preservation orders, grade II and II* listed buildings, waste sites, waste consultation zones, air quality management areas, a mineral safeguarding area, and public rights of way. The Natural Gas Pipeline and buffer zone runs through Marsh Barton Industrial Estate. The study area also contains 3 HSE Hazard Consultation Zones (inner, middle and outer). However a large proportion of the pipeline and consultation zones fall within a Liveable Exeter Site excluded from this study area.

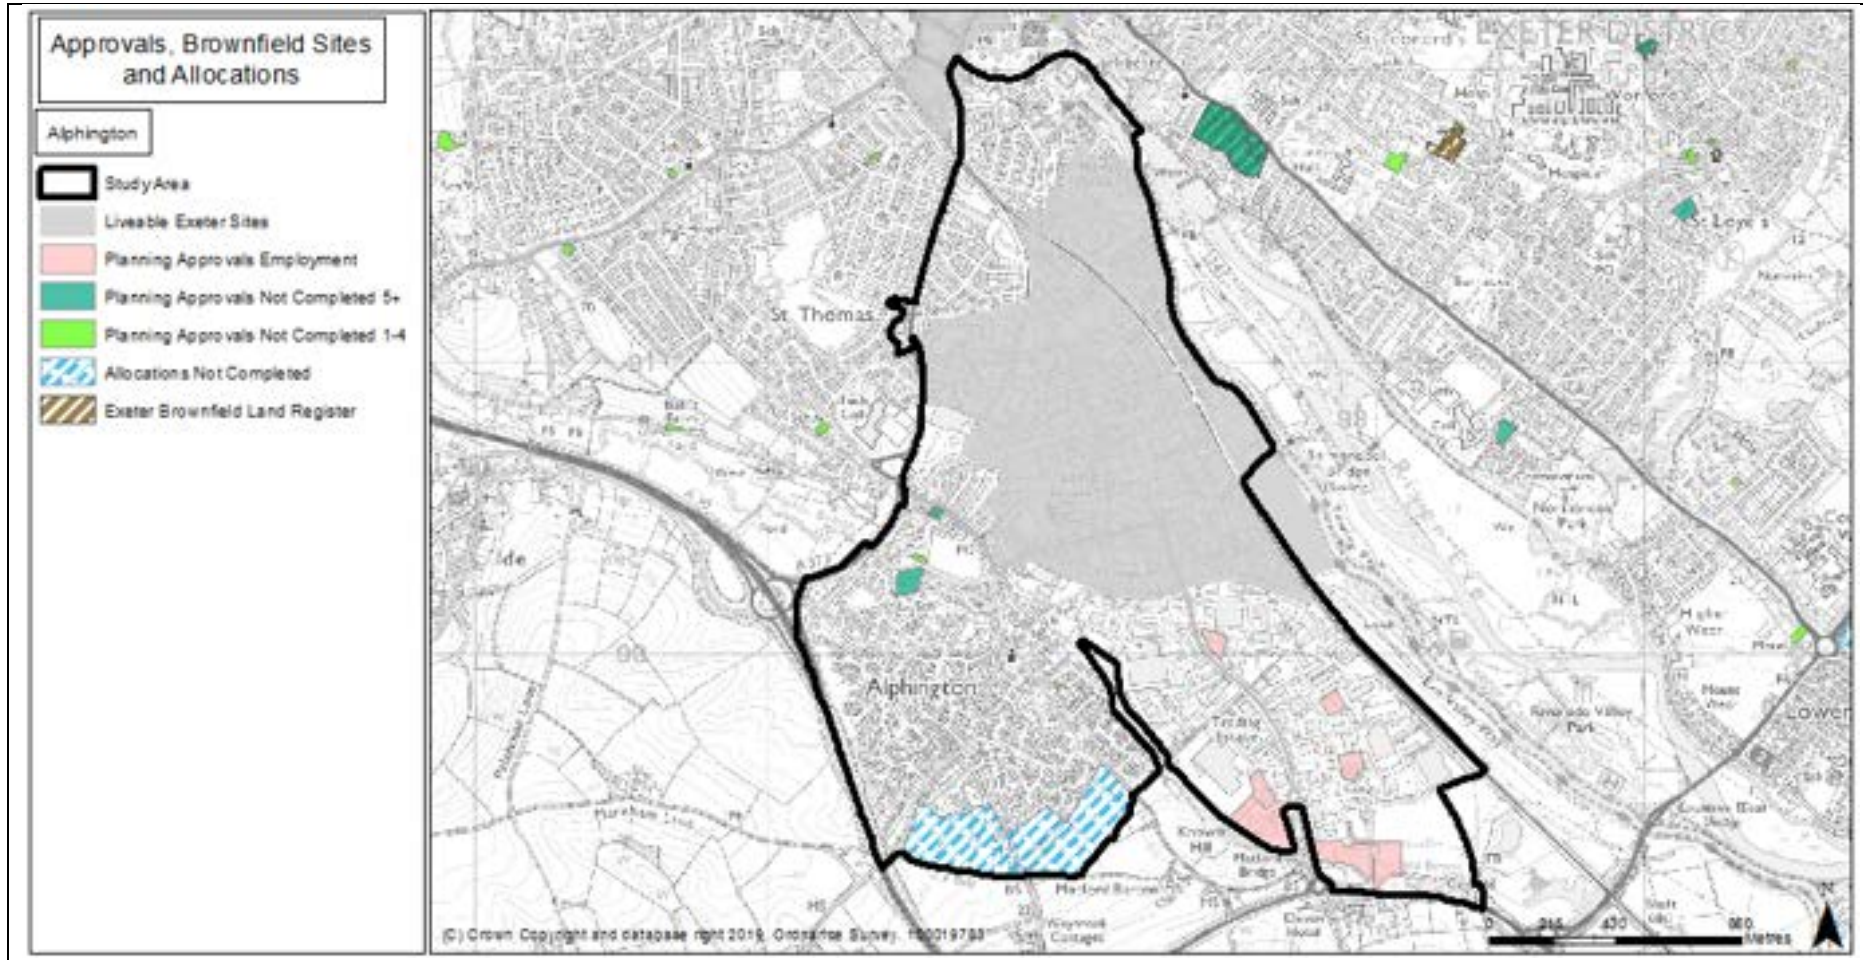

1F – Density profiles

Notes: A large proportion of Alphington study area is Marsh Barton Industrial Estate with a very low housing density (0-1 dwellings per hectare). The Canal Basin, also within the Riverside Valley Park has a very low housing density. Areas of higher density can be found around Exeter Quay (60-100+ dph), and towards St Thomas/Alphington Road (30-99dph). The area around former Alphington village is predominantly lower density (2-29dph) with some pockets of slightly higher density (30-59dph).

Stage 2 Sources of Supply

2A – Planning and monitoring inputs – planning approvals not completed, Brownfield Land Register and sites allocated but not completed

St Andrews Yard, Willeys Avenue, EX2 8EP	UCS_EC_A_01	7	<p>Site has development potential but mitigation measures and further assessment will be required.</p> <ul style="list-style-type: none"> - Archaeology / Conservation – The original church building has been destroyed and the present building does not retain sufficient interest to merit retention but a record should be made. The only likely archaeological interest on the site will be in the form of potential prehistoric or later palaeochannels; if present such deposits should be recorded and analysed in lieu of the impact on them caused by new development via condition. - Flood and Water – Site developable but completely in flood zones 2 & 3: FRA and follow planning policy. Consultation with EA to determine level of protection from Exeter Flood Defence Scheme - Appropriate surface water drainage strategy required so as not to increase runoff/lower to greenfield runoff rate. DCC SuDS policy to be followed - Highways – Vehicular spaces and turning circle to be delivered in accordance with approved plans and provision of covered cycle parking. - Minerals and Waste – Not located within a MSA or MCA or WCZ - PROW – No PROW on site. - Environmental Health – Site developable, with assessment and mitigation as required (air quality and contaminated land) - ECC Housing – N/A - ECC Estates – N/A - Arboriculturalist – Site developable

Land behind 66 Chudleigh Road, EX2 8TZ	UCS_EC_A_30	6	<p>Site has development potential but mitigation measures and further assessment will be required.</p> <ul style="list-style-type: none"> - Archaeology / Conservation – As a medium sized largely undeveloped site this has general potential for currently unknown prehistoric & Roman remains as it is located adj former Roman road line (Chudleigh Road) and other prehistoric remains are known in the area. As such there will be a need for archaeological survey work prior to determination and potentially post determination. Unlikely to affect principle of development but may influence layout. - Flood and Water – Site developable subject to appropriate surface water drainage strategy required so as not to increase runoff/lower to greenfield runoff rate. DCC SuDS policy to be followed - Highways – Access via Veitch Gardens and would need pedestrian links into Aldens East. S106 items would be akin to 15/0640/OUT as this is almost an extension of SWE - Minerals and Waste – Not located within a MSA or MCA or WCZ - PROW – No PROW on site. - Environmental Health – Site developable, with assessment and mitigation as required (air quality, contaminated land, transport noise, noise from local businesses). - ECC Housing – N/A - ECC Estates – N/A - Arboriculturalist – Site developable

B. Clifton Hill and Polsloe

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

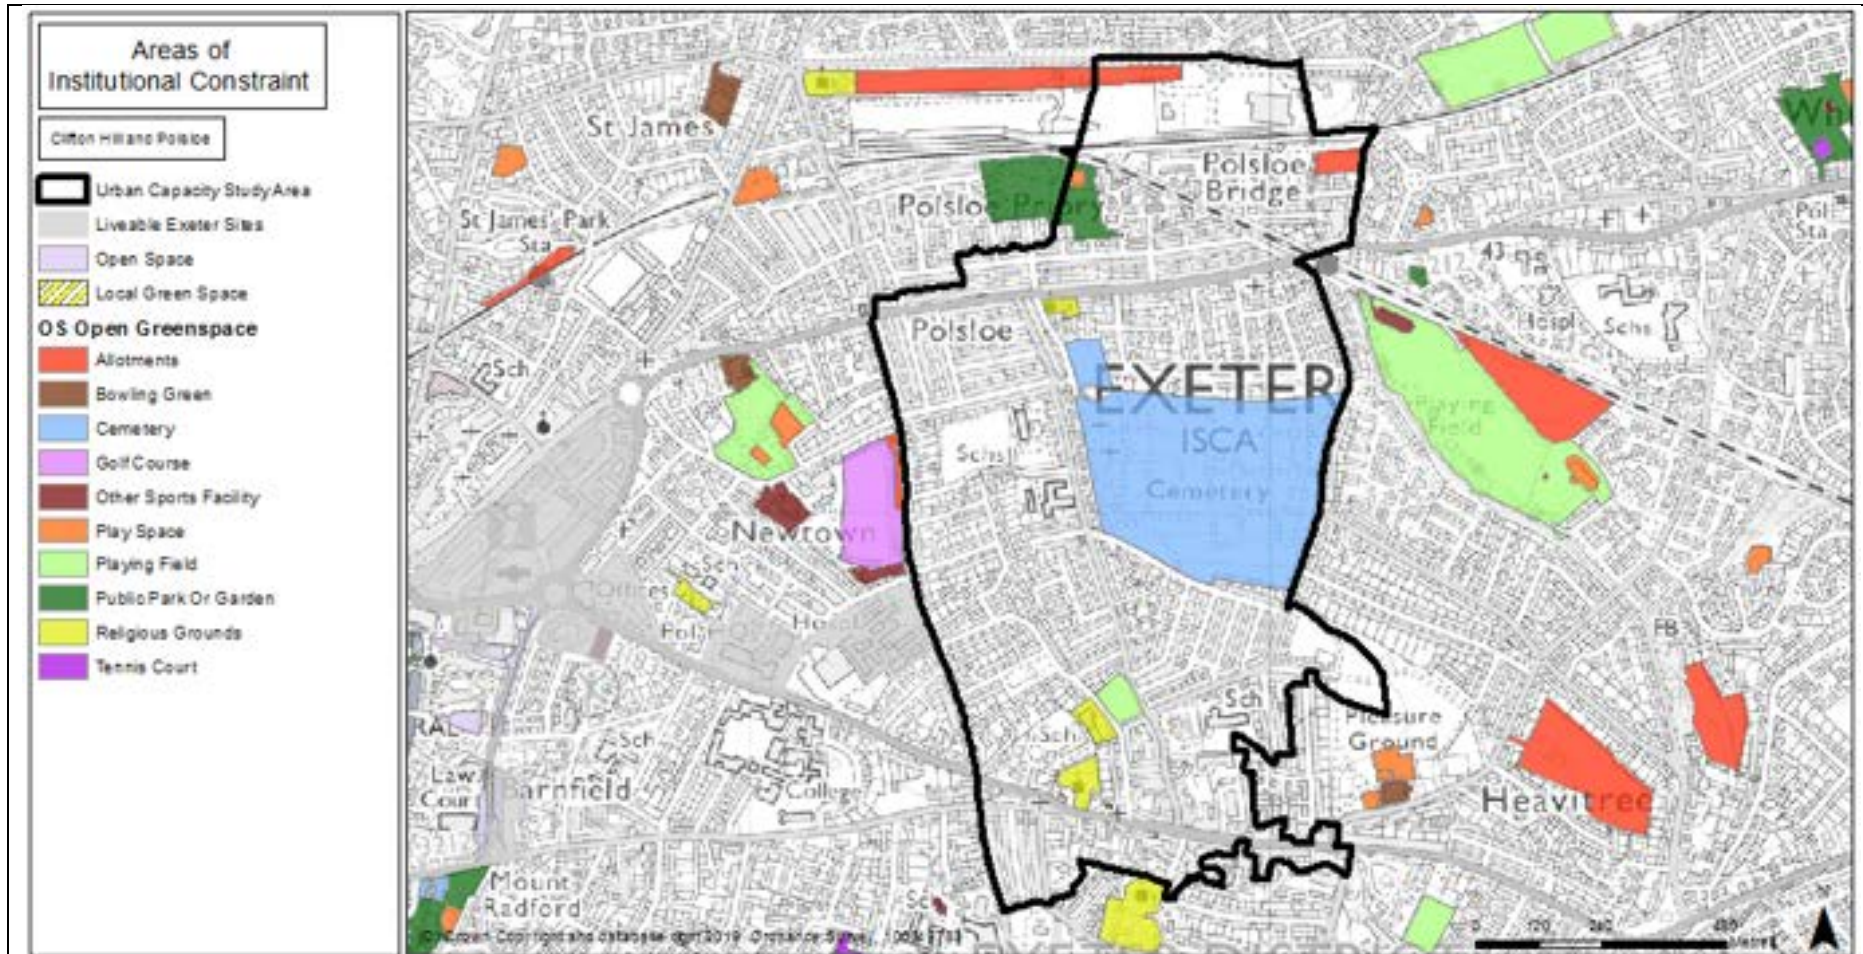

Notes: This assessment covers the area of Clifton Hill and Polsloe. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into MSOAs within the existing urban area. Population around 8500. Area approximately 106ha

1C – Areas of statutory exclusion

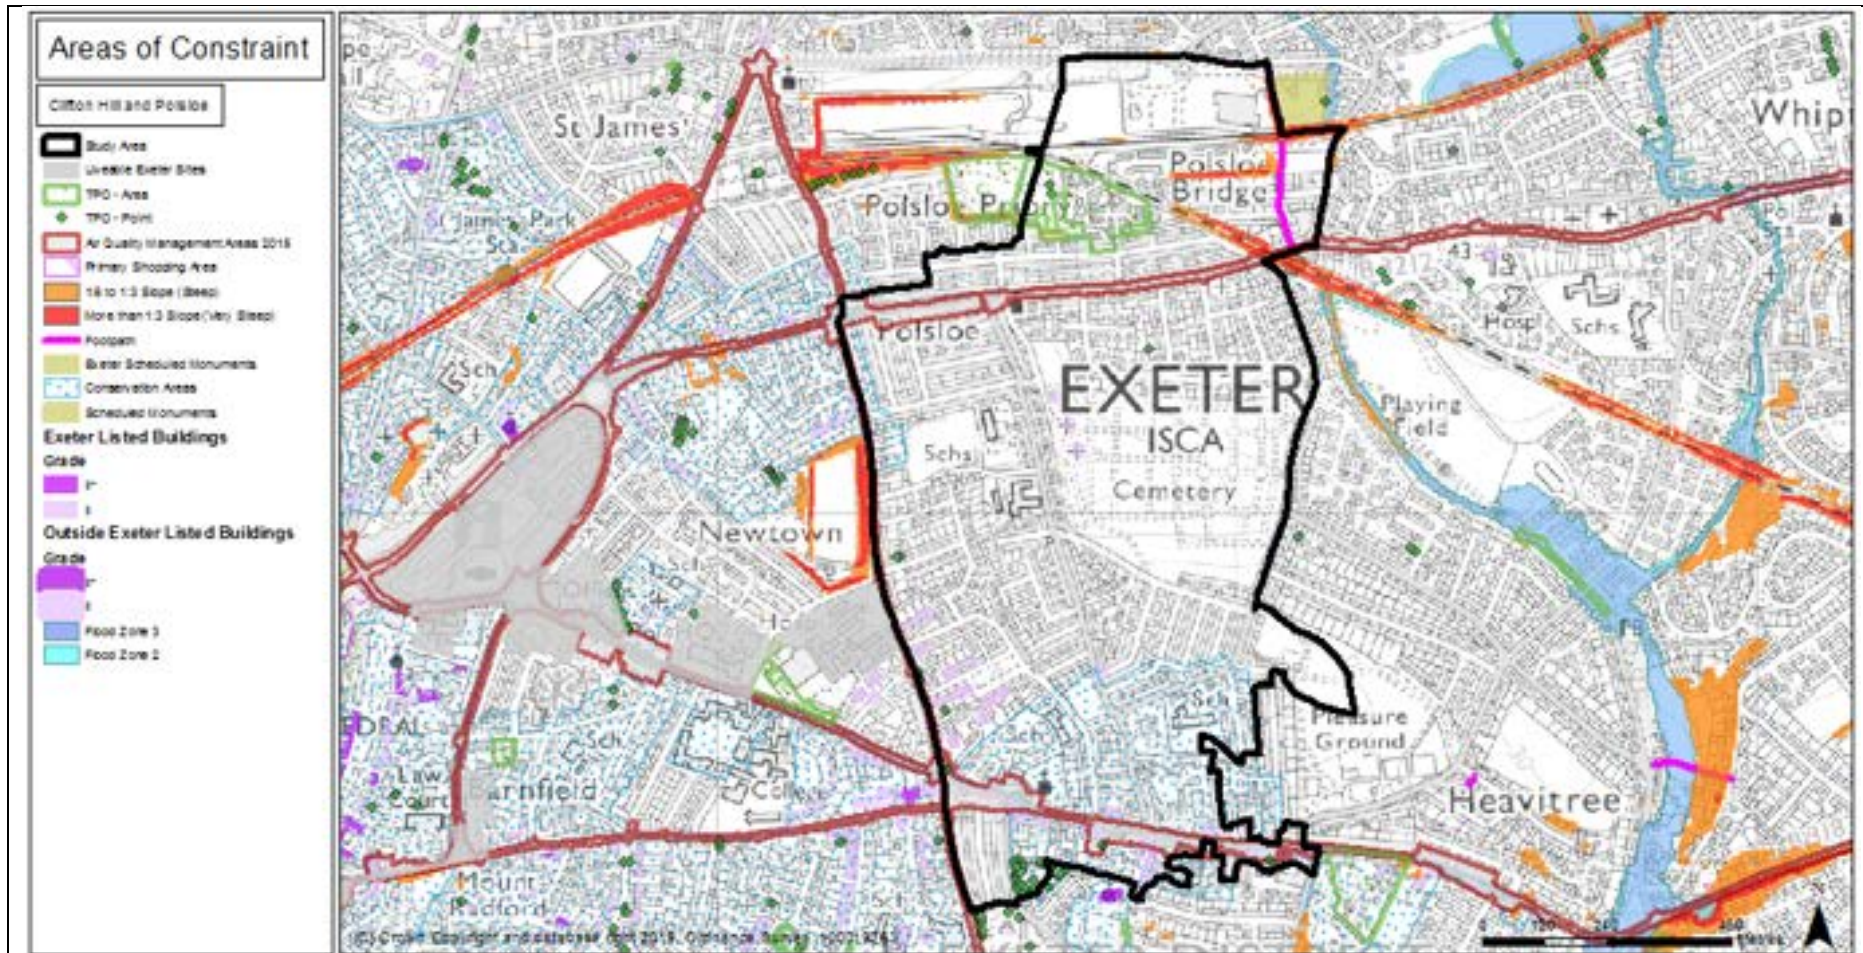

Notes: No areas of statutory exclusion are located within this study area

1D – Areas of institutional constraints

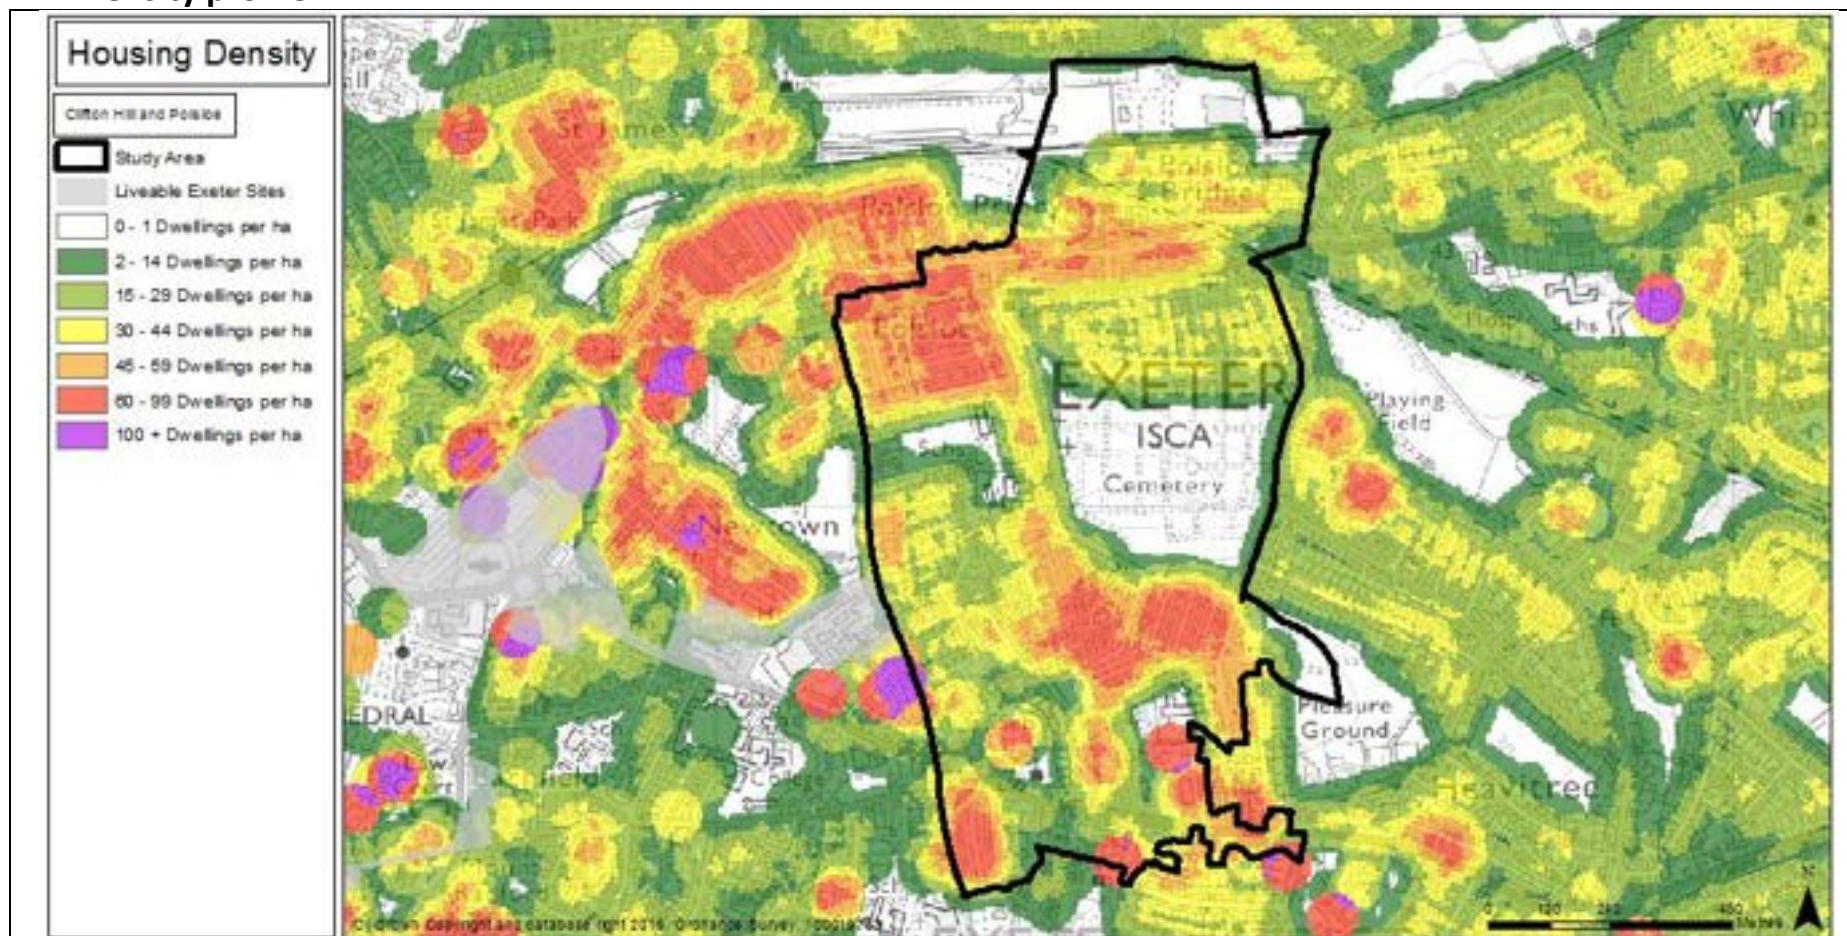

Notes: There are a number of different areas within this study area that derive a specific public benefit from community use. These include Higher Cemetery, religious buildings, designated open space, and allotments. All of these will need to be taken into consideration during site identification and assessment.

1E – Areas of constraint

Notes: A number of areas of constraint exist within the Clifton Hill and Polsloe study area which may impact upon the deliverability of new housing. Areas of constraint include: Belmont and Heavitree conservation areas, a number of tree preservation orders, grade II and II* listed buildings, air quality management areas 2015, and a public right of way.

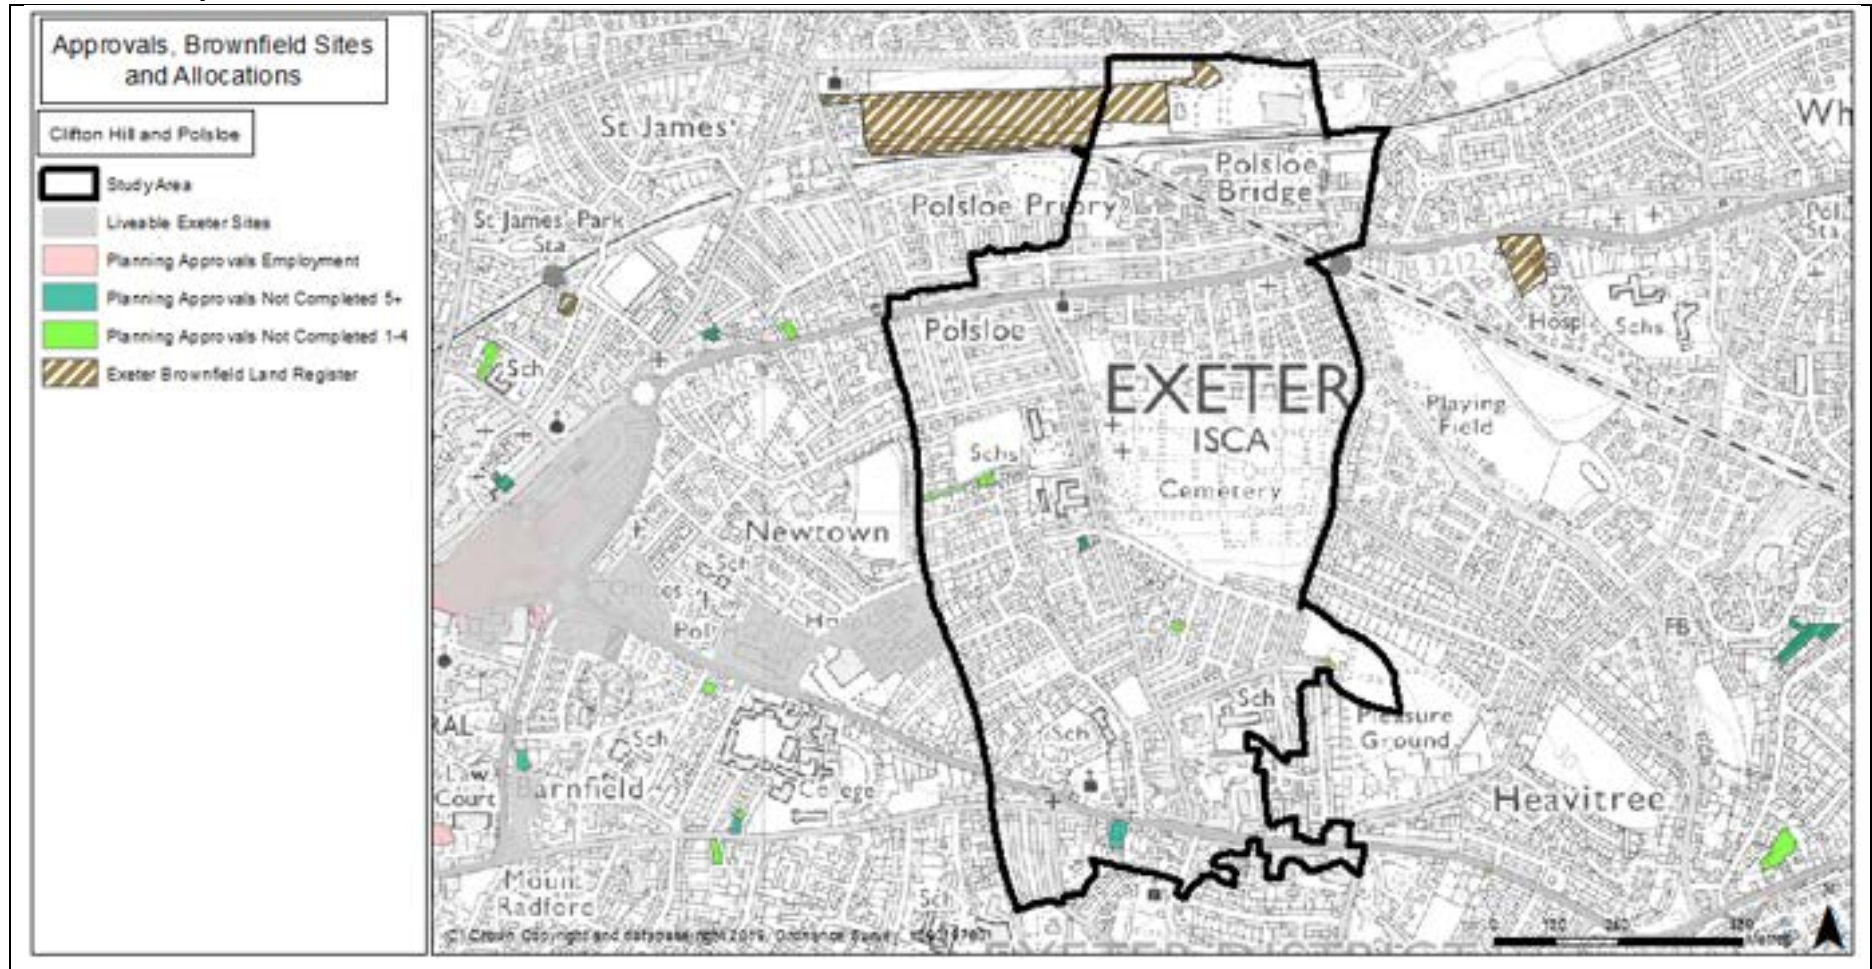

1F – Density profile

Notes: The majority of the residential areas within Clifton Hill and Polsloe are relatively high density with the areas of highest density (45-99 dwellings per hectare) located around the terraces in the north west (Jubilee Road, Park Road, Monks Road), the terraces south of Higher Cemetery (Goldsmith Road, Alpha Street, Normandy Road), Rowancroft student accommodation, Baker Street, The Maltings flats, Pegasus Court and Regent Square. Lower density (15-44 dwellings per hectare) can be found around Bicton Place and Mont Le Grand, north of Higher Cemetery (Tarbet Avenue), sections of Fore Street Heavitree and sections of Polsloe Road. Areas of very low density (0-1 dwellings per hectare) at Higher Cemetery, schools, religious buildings, Exmouth Junction former coal/maintenance depot, and Morrisons supermarket, fuel station and carpark.

Stage 2 Sources of Supply

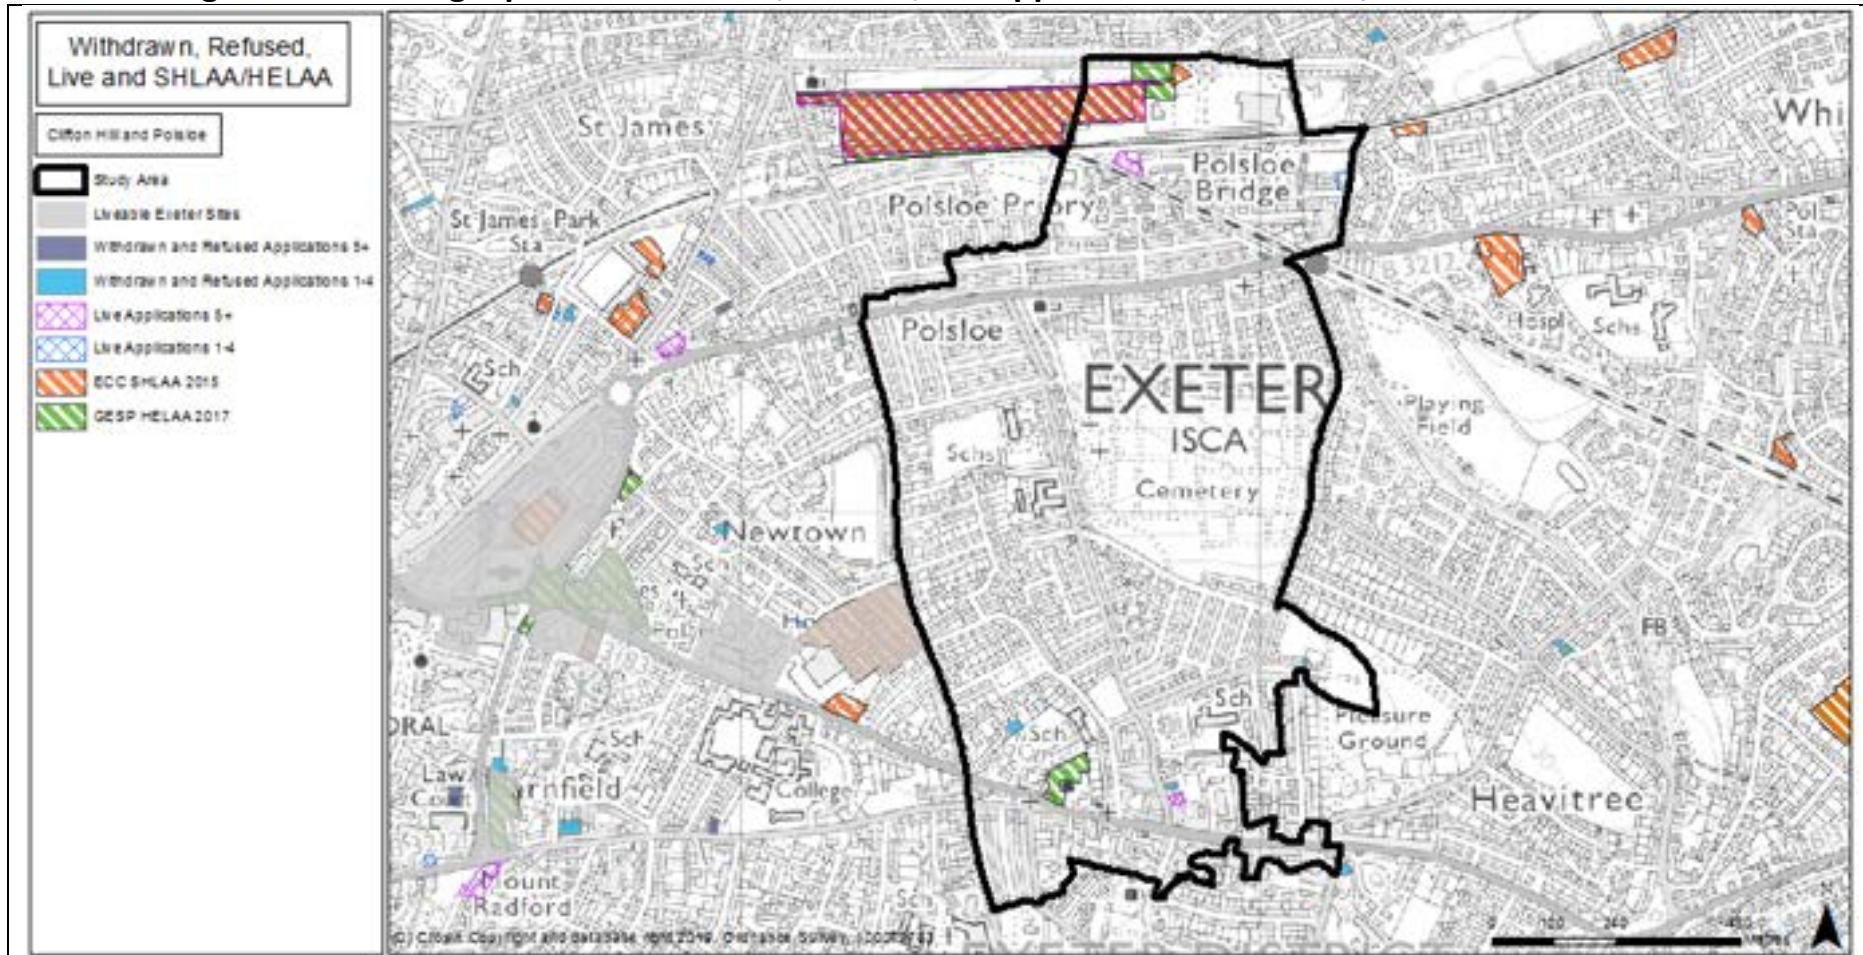

2A – Planning and monitoring inputs – planning approvals not completed, Brownfield Land Register, and sites allocated but not completed

Notes: All sites below have been excluded from further consideration, given their existing planning status.

C. Cowick

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

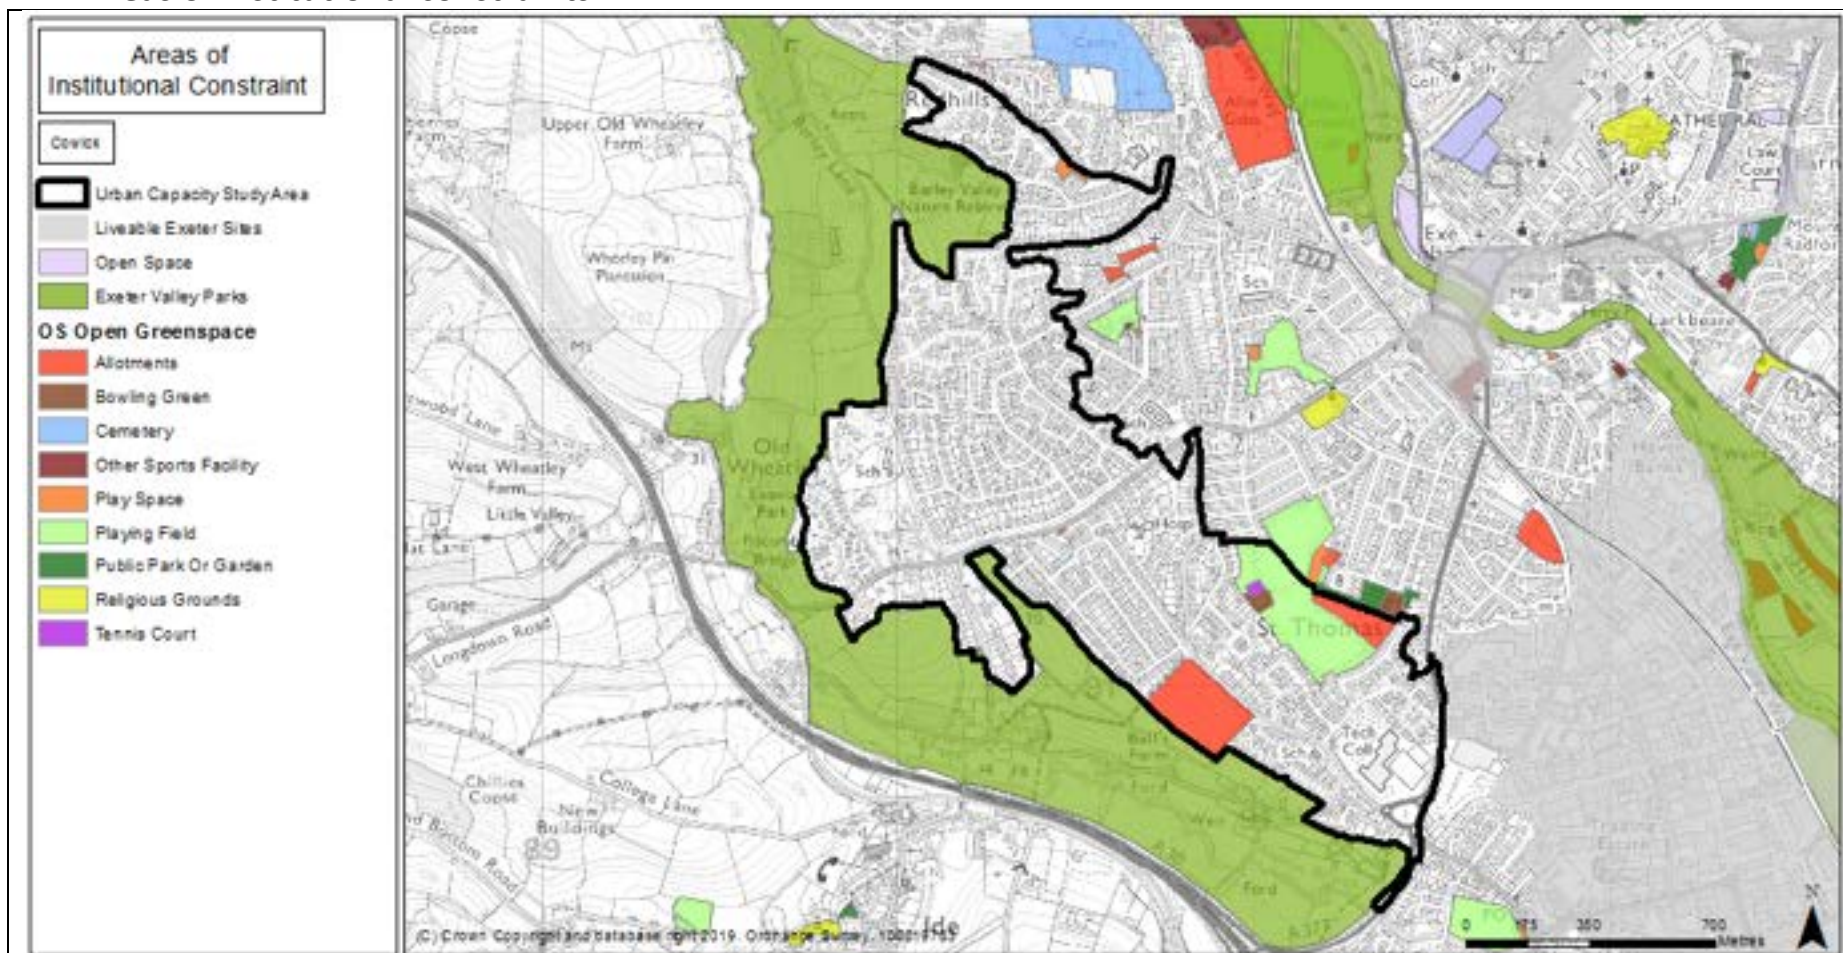

Notes: This study covers the area of Cowick. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into Middle Super Output Area (MSOA) within the existing urban area. Cowick has a population of about 7,300.

1C – Areas of statutory exclusion

Notes: No areas of statutory exclusion within this study area

1D – Areas of institutional constraints

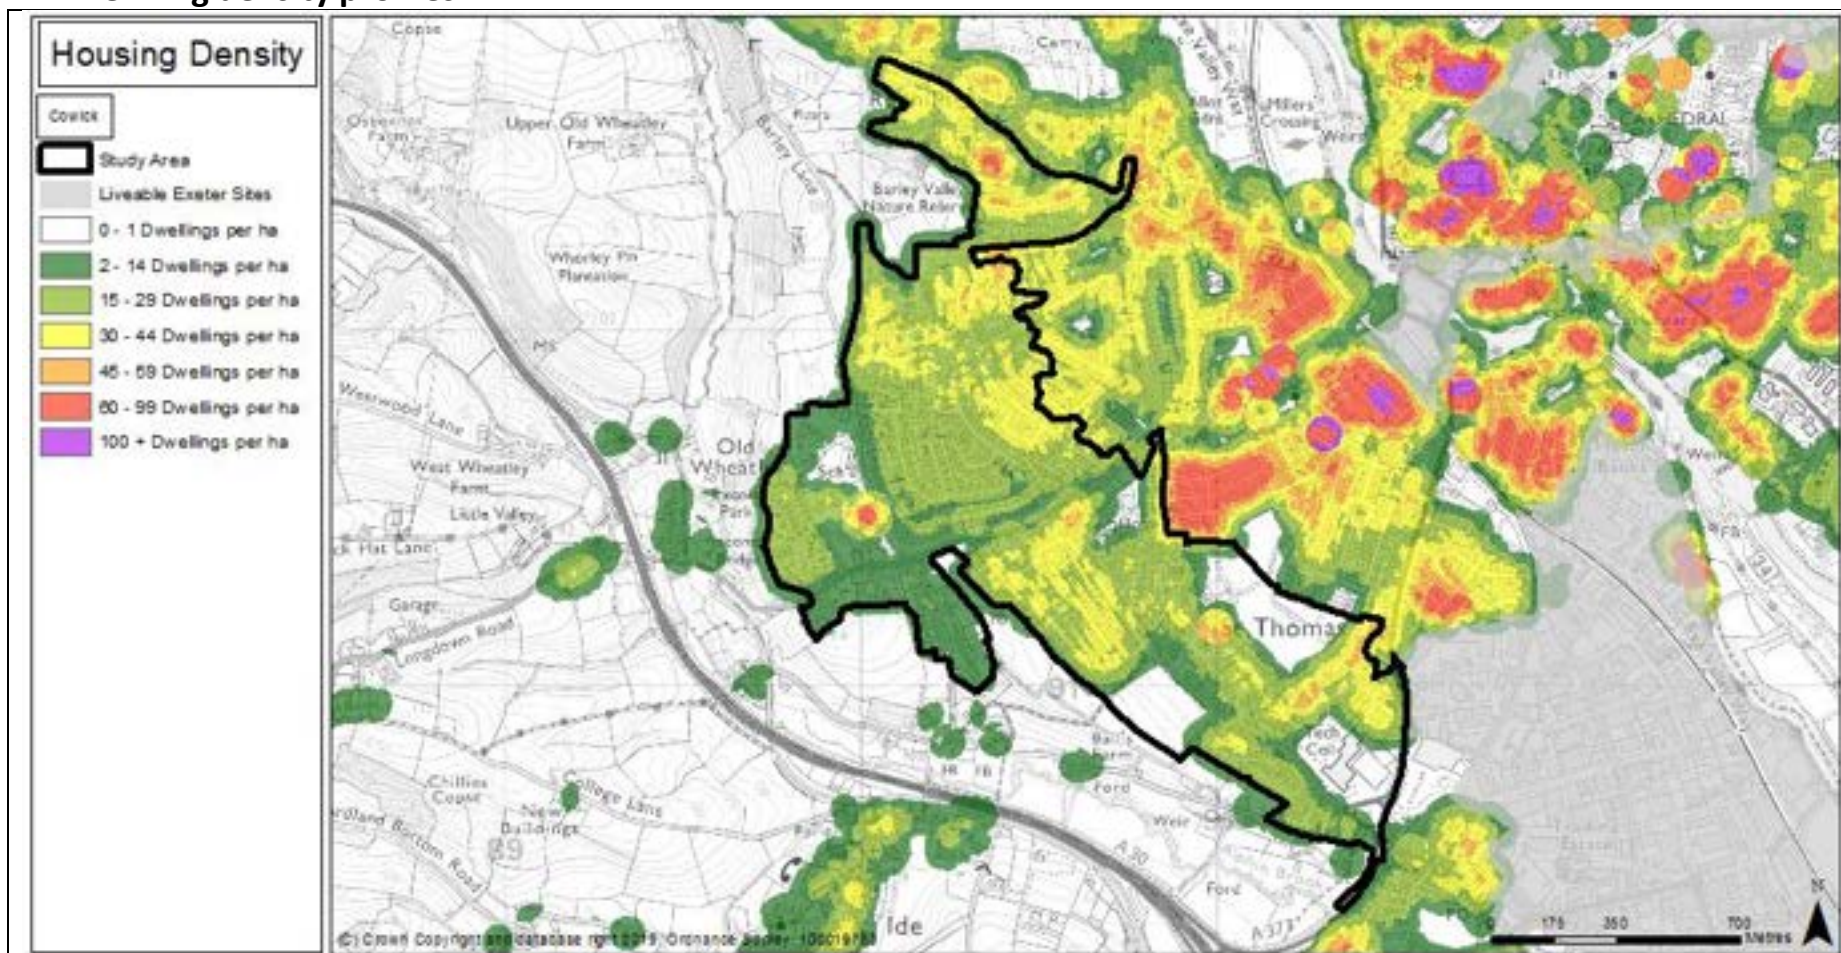

Notes: The Cowick study area is bordered along the west by the Alphington Whitestone Valley Park. Within the study area are a number of other areas that derive a specific public benefit including Cowick Lane and Pines 1 allotments, play areas, playing fields and the large Cowick Barton recreation ground bordering the St Thomas study area. All of these will need to be taken into consideration during site identification and assessment.

1E – Areas of constraint

Notes: The Cowick study area contains a number of constraints that will require consideration within the study. These include the flood zone 3, air quality management area along Cowick Lane, Alphinbrook and Princes Square conservation areas, public rights of way, an air quality management area, areas of steep land, TPOs, Little John’s Cross scheduled monument, and Grade I, II* and II listed buildings.

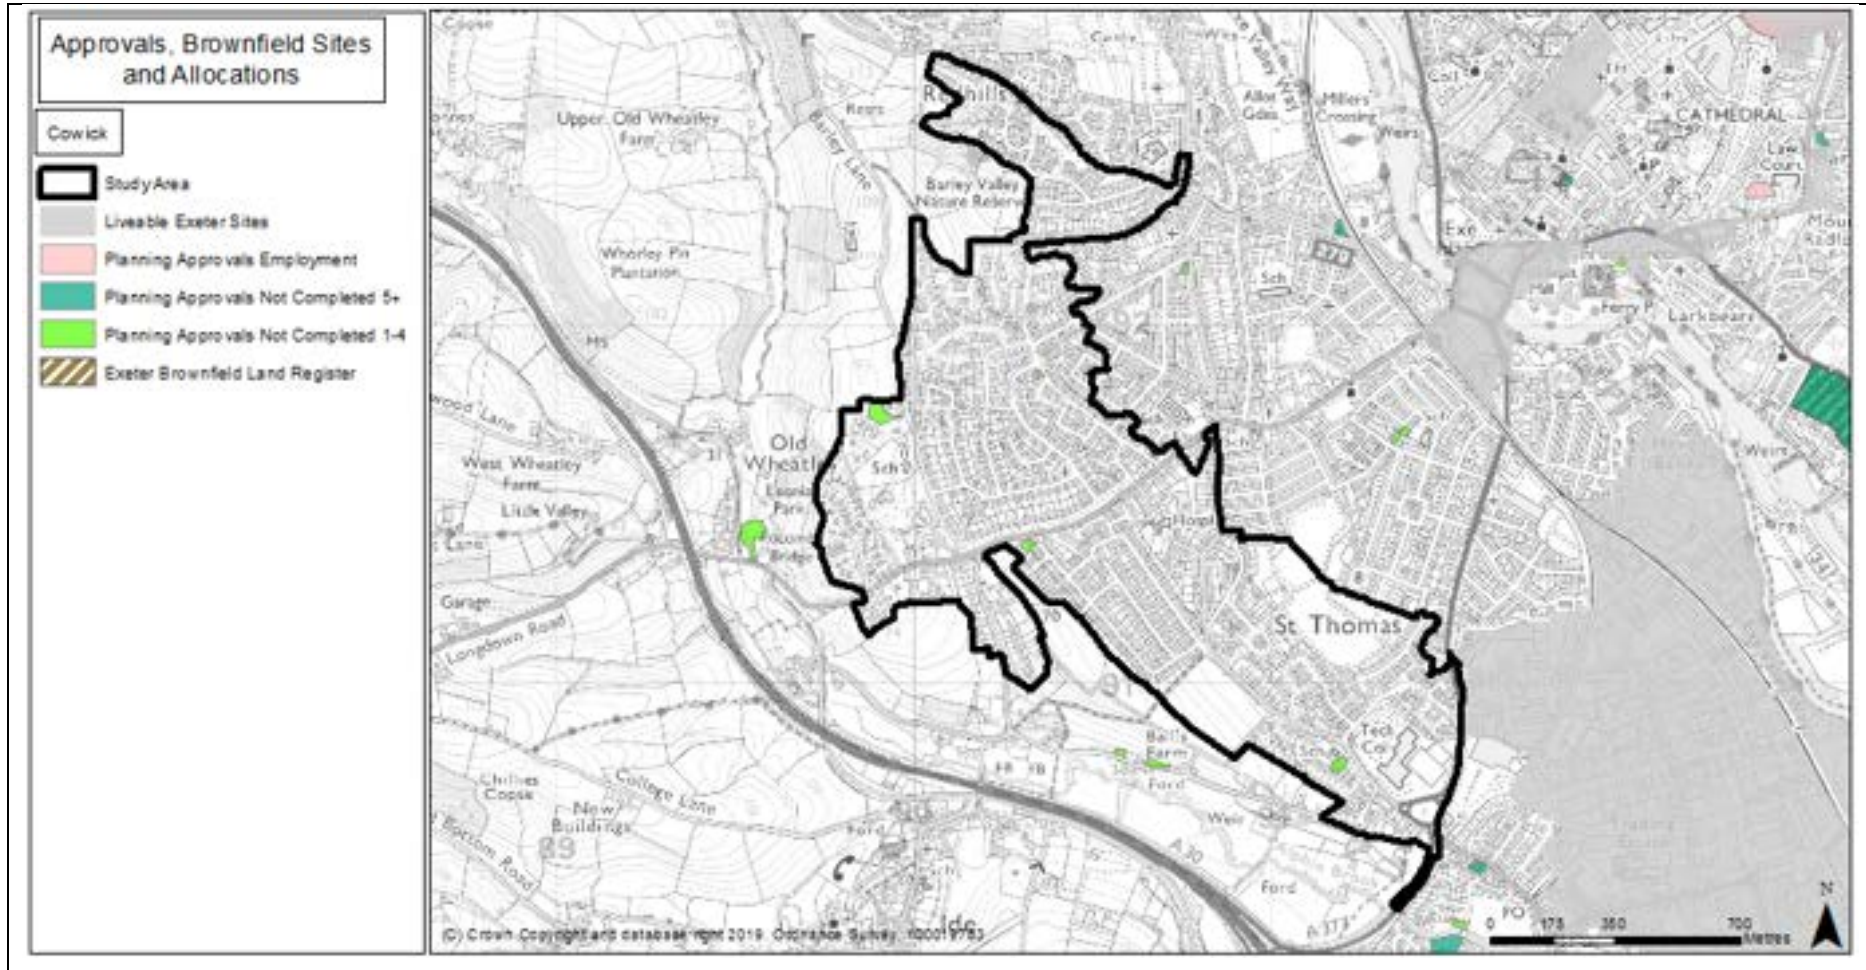

1F – Defining density profiles

Notes: The study area contains a mixture of low to moderate density detached, semi-detached and short terraced housing built between approximately 1930 – 1970. There are few pockets of slightly higher density, predominantly where flats are located.

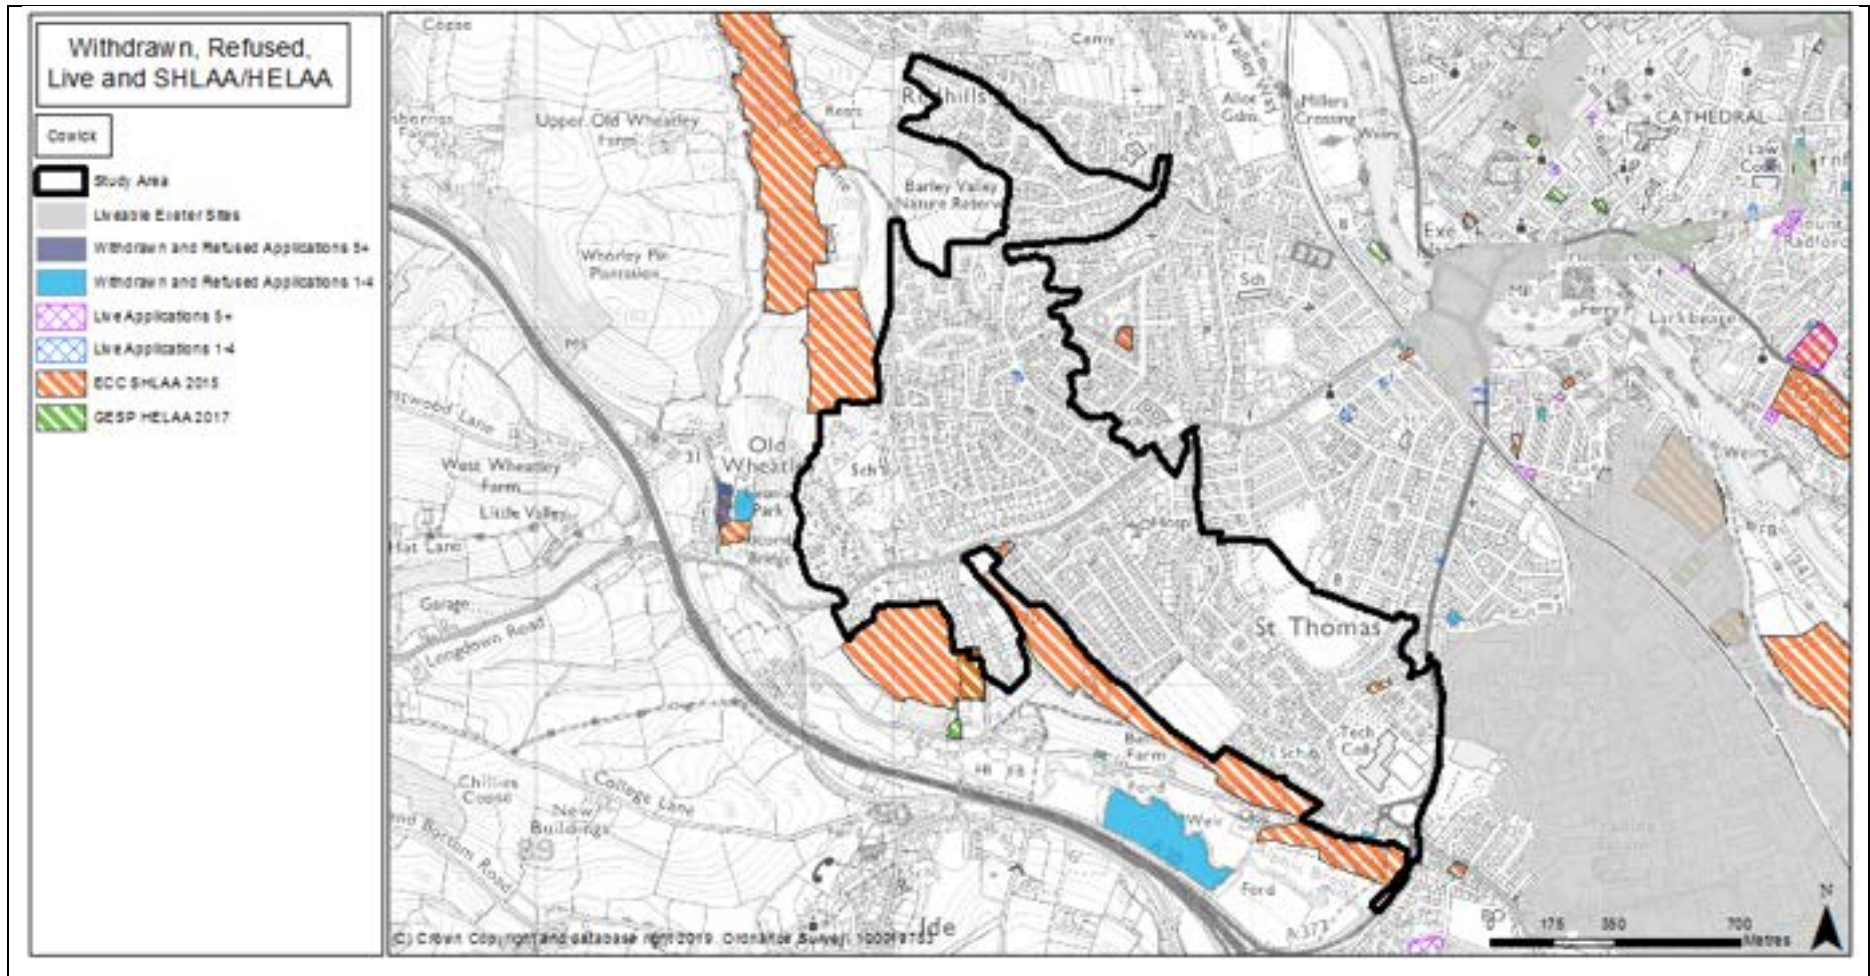

Stage 2 Sources of Supply

2A – Planning and monitoring inputs – planning approvals not completed, Brownfield Land Register and sites allocated but not completed

D. Digby, Sowton and Newcourt

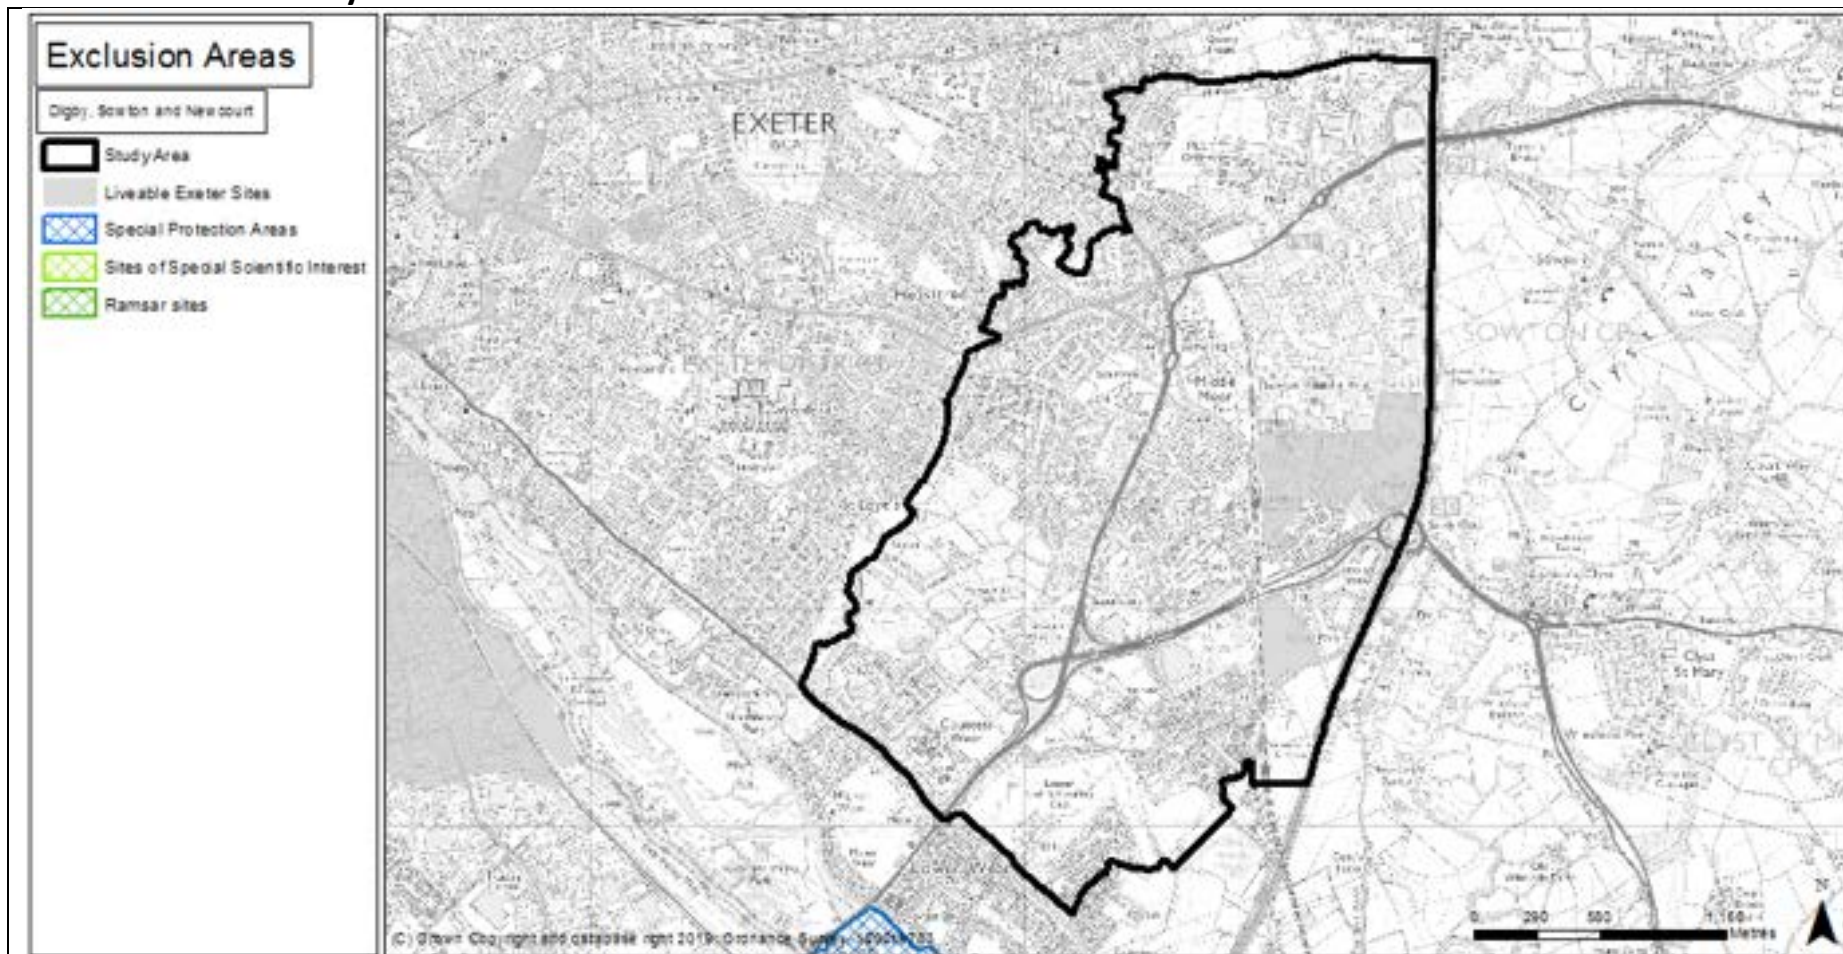

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

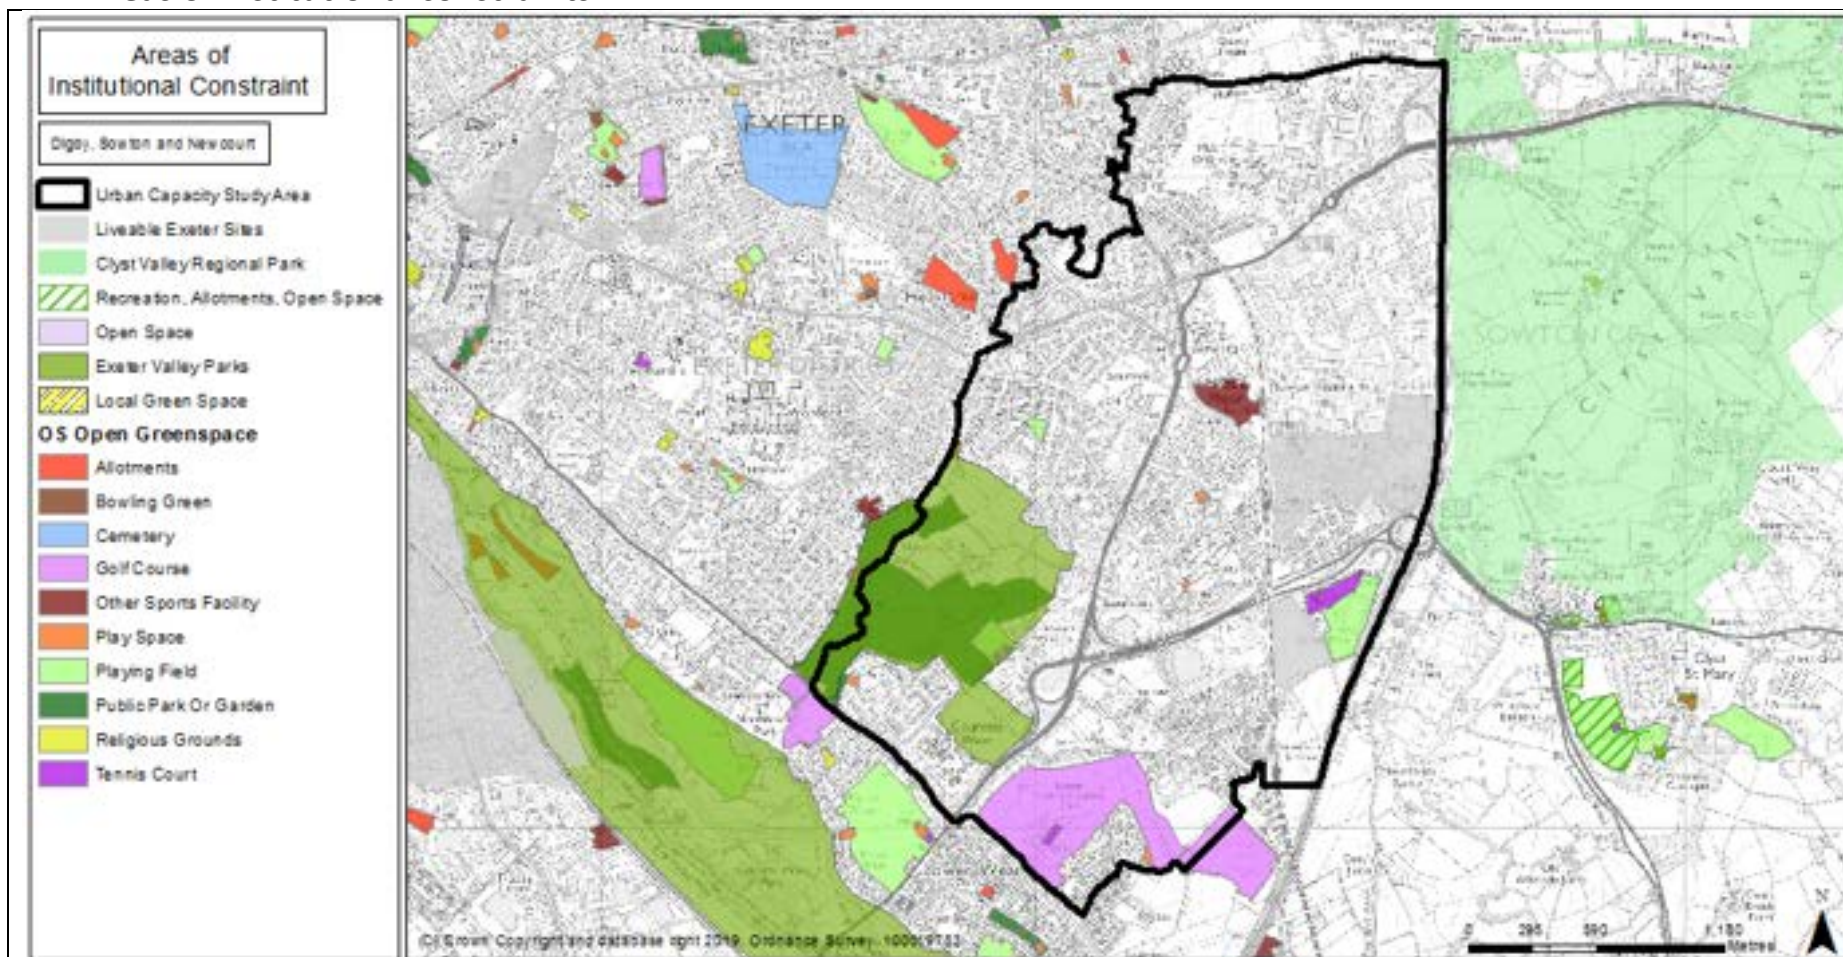

Notes: This study covers the area of Digby, Sowton and Newcourt. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into Middle Super Output Area (MSOA) within the existing urban area. Digby, Sowton and Newcourt has a population of about 11,784.

1C – Areas of statutory exclusion

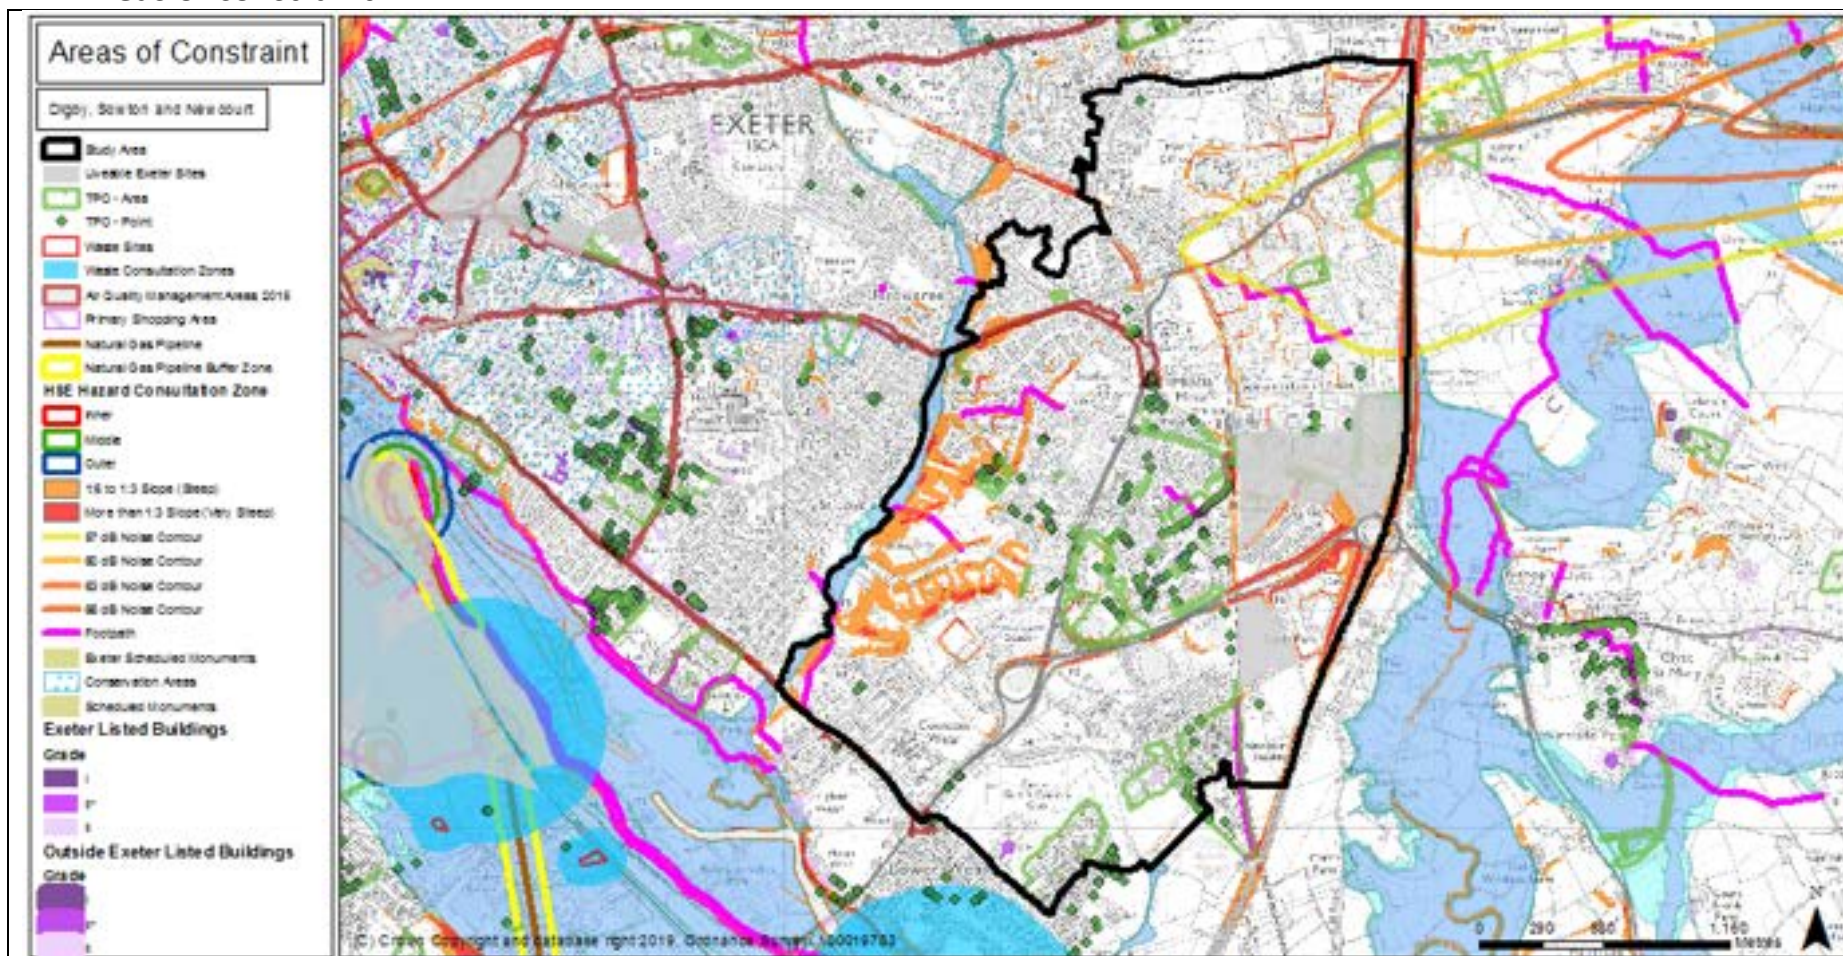

Notes: The study area also contains Liveable Exeter Sites, an area excluded from this assessment. No other statutory exclusion areas exist in the study area.

1D – Areas of institutional constraints

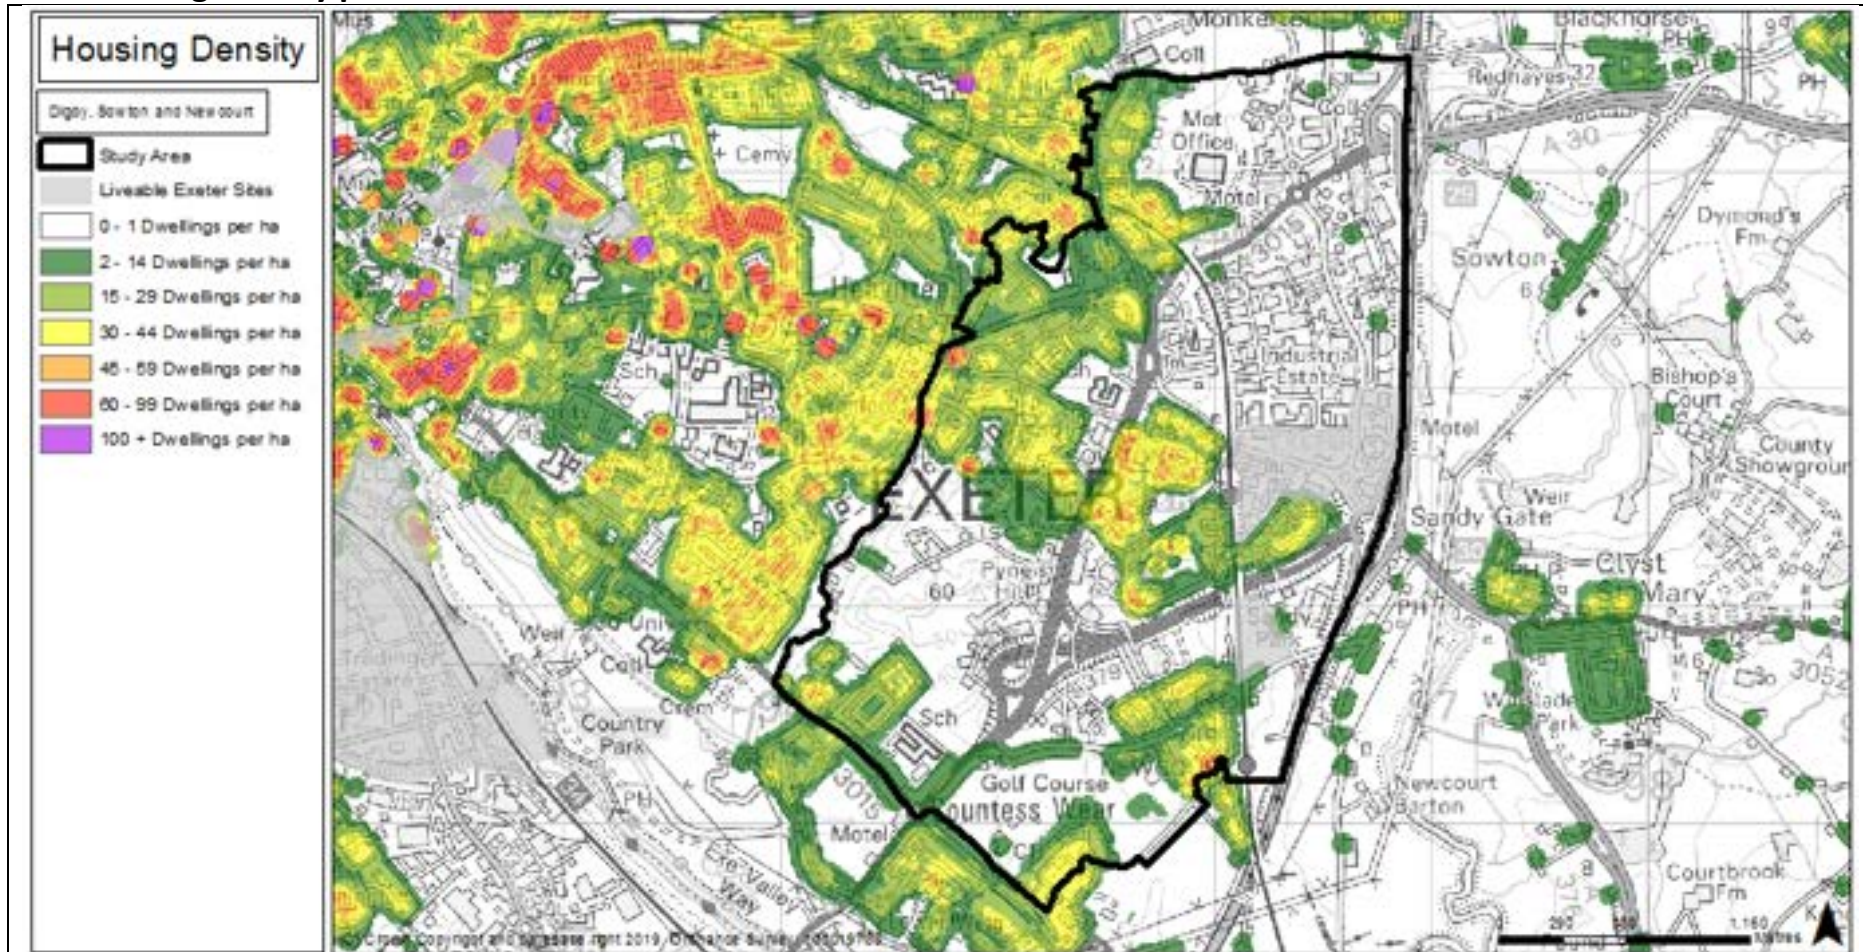

Notes: There are a number of different areas within this study area that derive a specific public benefit from community use. These include Ludwell Valley Park, other public parks and play space, and sports facilities. All of these will need to be taken into consideration during site identification and assessment. The Digby, Sowton and Newcourt study area is bordered along the east by the Cyst Valley Regional Park. The study area also contains Liveable Exeter Sites, excluded from this assessment.

1E – Areas of constraint

Notes: A number of areas of constraint exist within the Digby, Sowton and Newcourt study area which may impact upon the deliverability of new housing. Areas of constraint include: a number of tree preservation orders, air quality management areas, public rights of way, some areas of steep land, Flood Zone 2 and 3, and an area is within the airport noise contour.

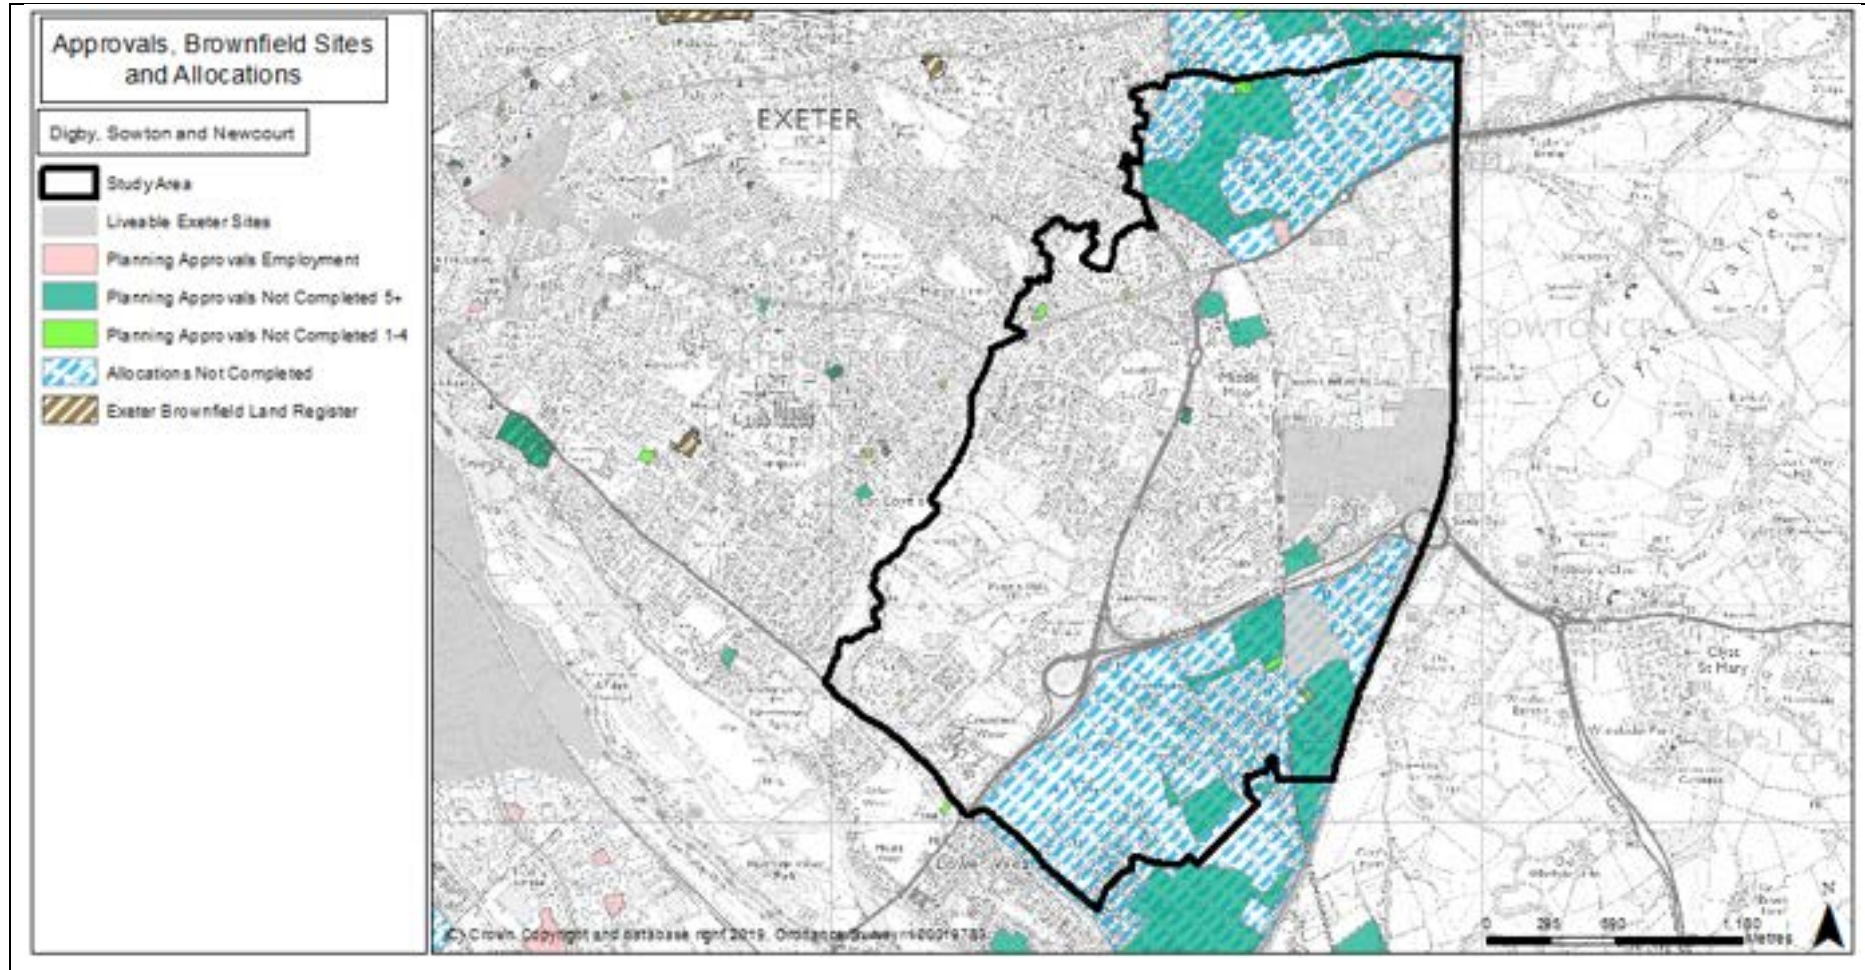

1F – Defining density profiles

Notes: The study area contains a mixture of low to moderate density housing. There are large sections of 0-1 dwellings per hectare which relate to Ludwell Valley Park, sports facilities, Middlemoor Police Headquarters, transport infrastructure, industrial and employment land.

E. Exeter City Centre

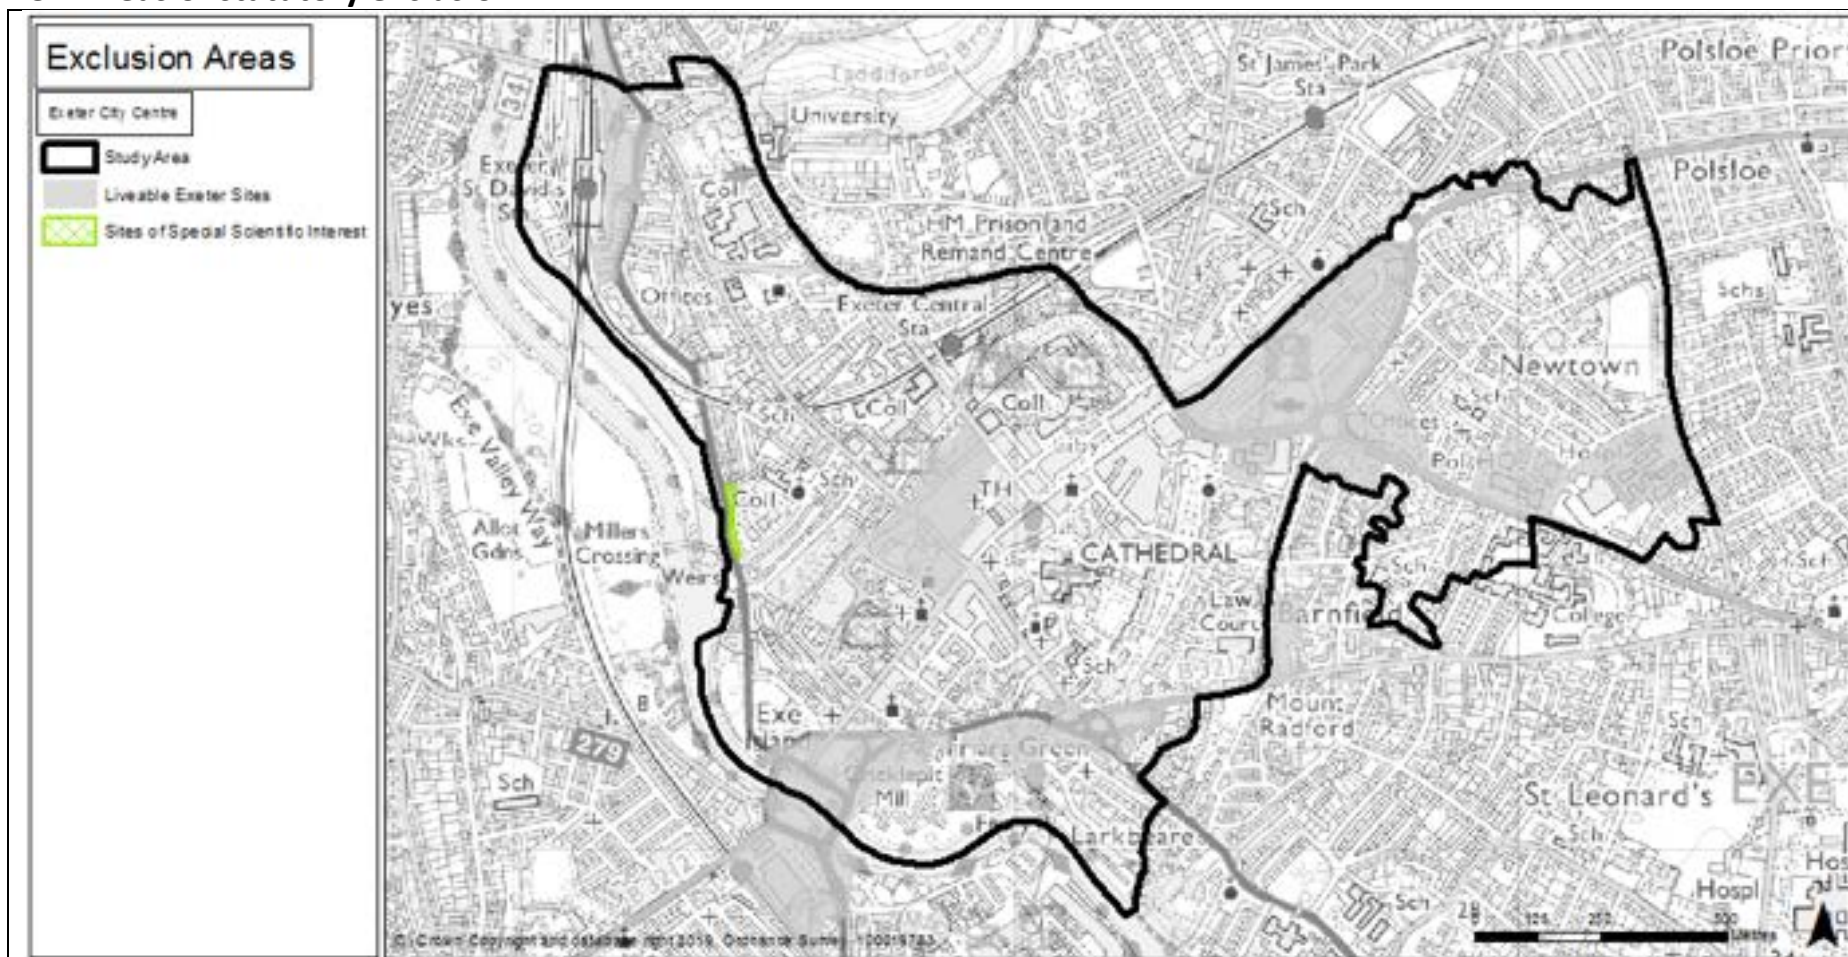

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

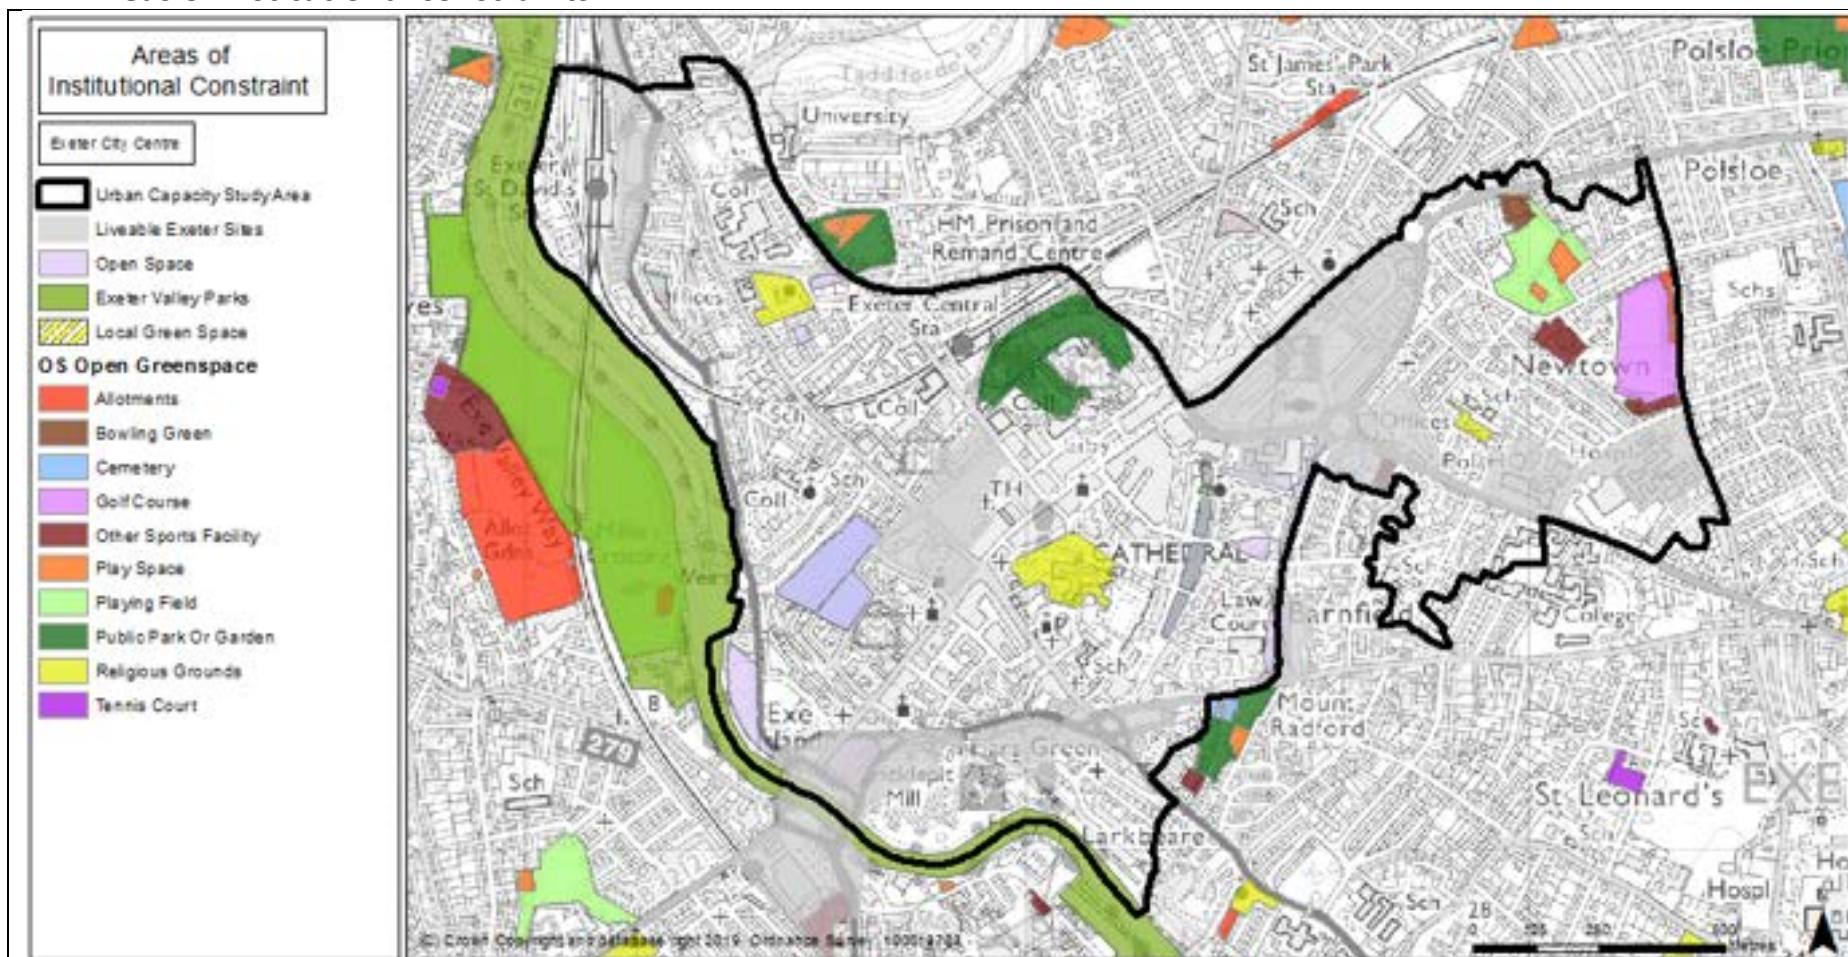

Notes: This study covers the area of the City Centre. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into Middle Super Output Area (MSOA) within the existing urban area. Exeter City Centre has a population of 11,300.

1C – Areas of statutory exclusion

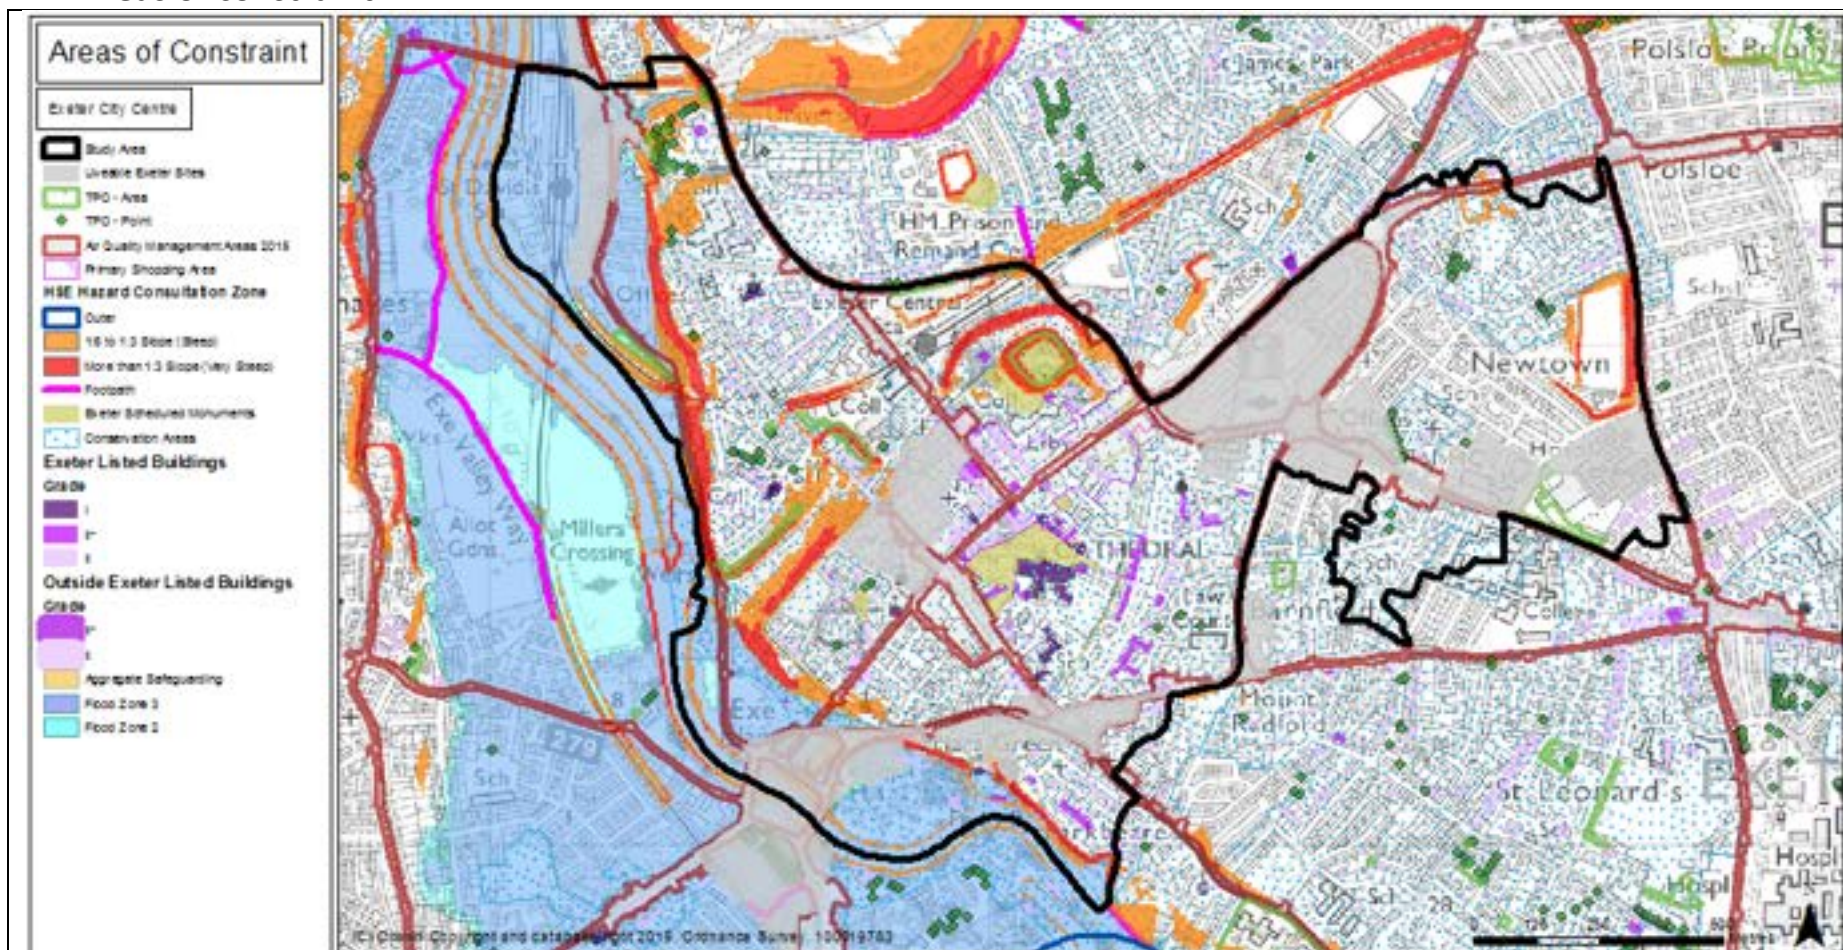

Notes: The area contains one geological SSSI on a steep cutting on Bonhay Road.

1D – Areas of institutional constraints

Notes: There are a number of different areas that provide public benefits including open space, cemeteries, Exeter Cathedral Green, public parks, playing fields, allotments and a golf course, all of which need to be taken into consideration during site assessment. The Exeter Riverside Valley park runs along the border of the study area.

1E – Areas of constraint

Notes: A number of constraints exist within the City Centre, including the Cathedral, Rougemont Castle, Old Exe Bridge, and St Nicholas Priory scheduled monuments, extensive conservation area coverage (City Centre, St David's, Southernhay and The Friars, and Riverside conservation areas), numerous Grade I, II* and II listed buildings, TPOs, extensive air quality management areas, flood zone 3 and very steep areas of land. These constraints will be considered in the assessment work.

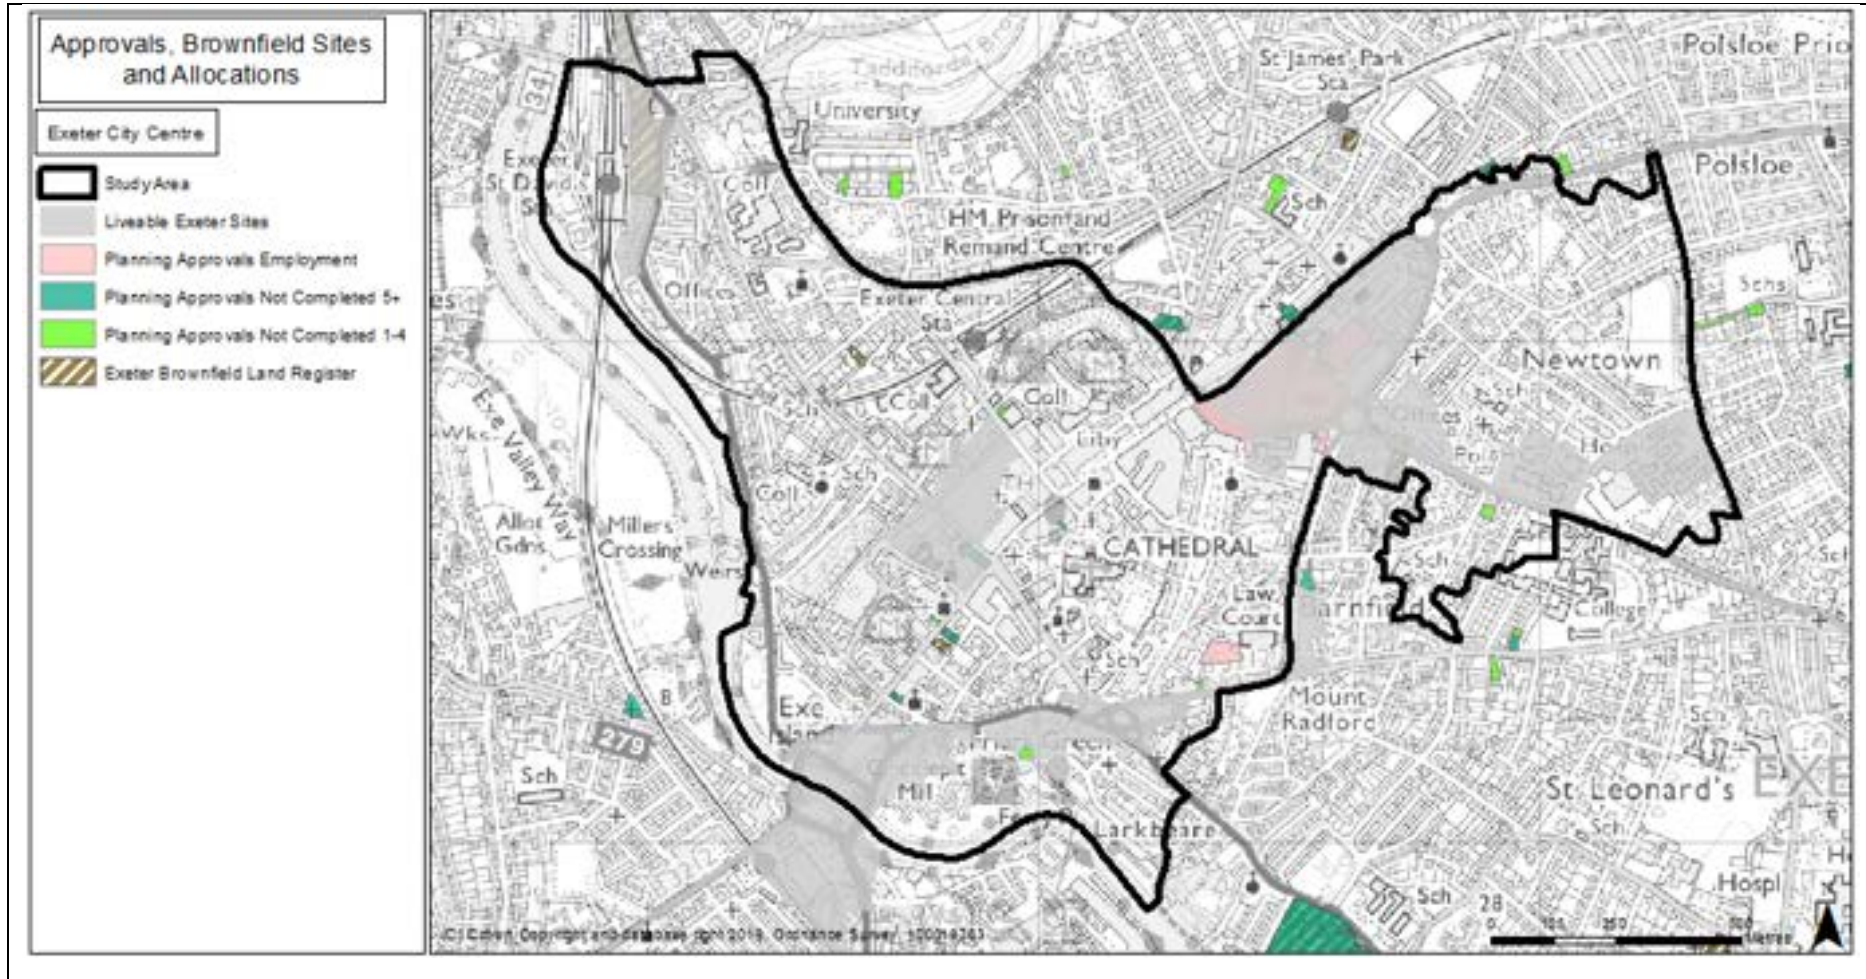

1F – Character density profiles

Notes: The City Centre area is characterised by medium to very high density housing, resulting from a mix of town housing, terraces and apartments. The areas of lower density are often a result of mixed-uses, open spaces including listed buildings and conservation area, and very steep land towards the river Exe.

F. Exwick

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

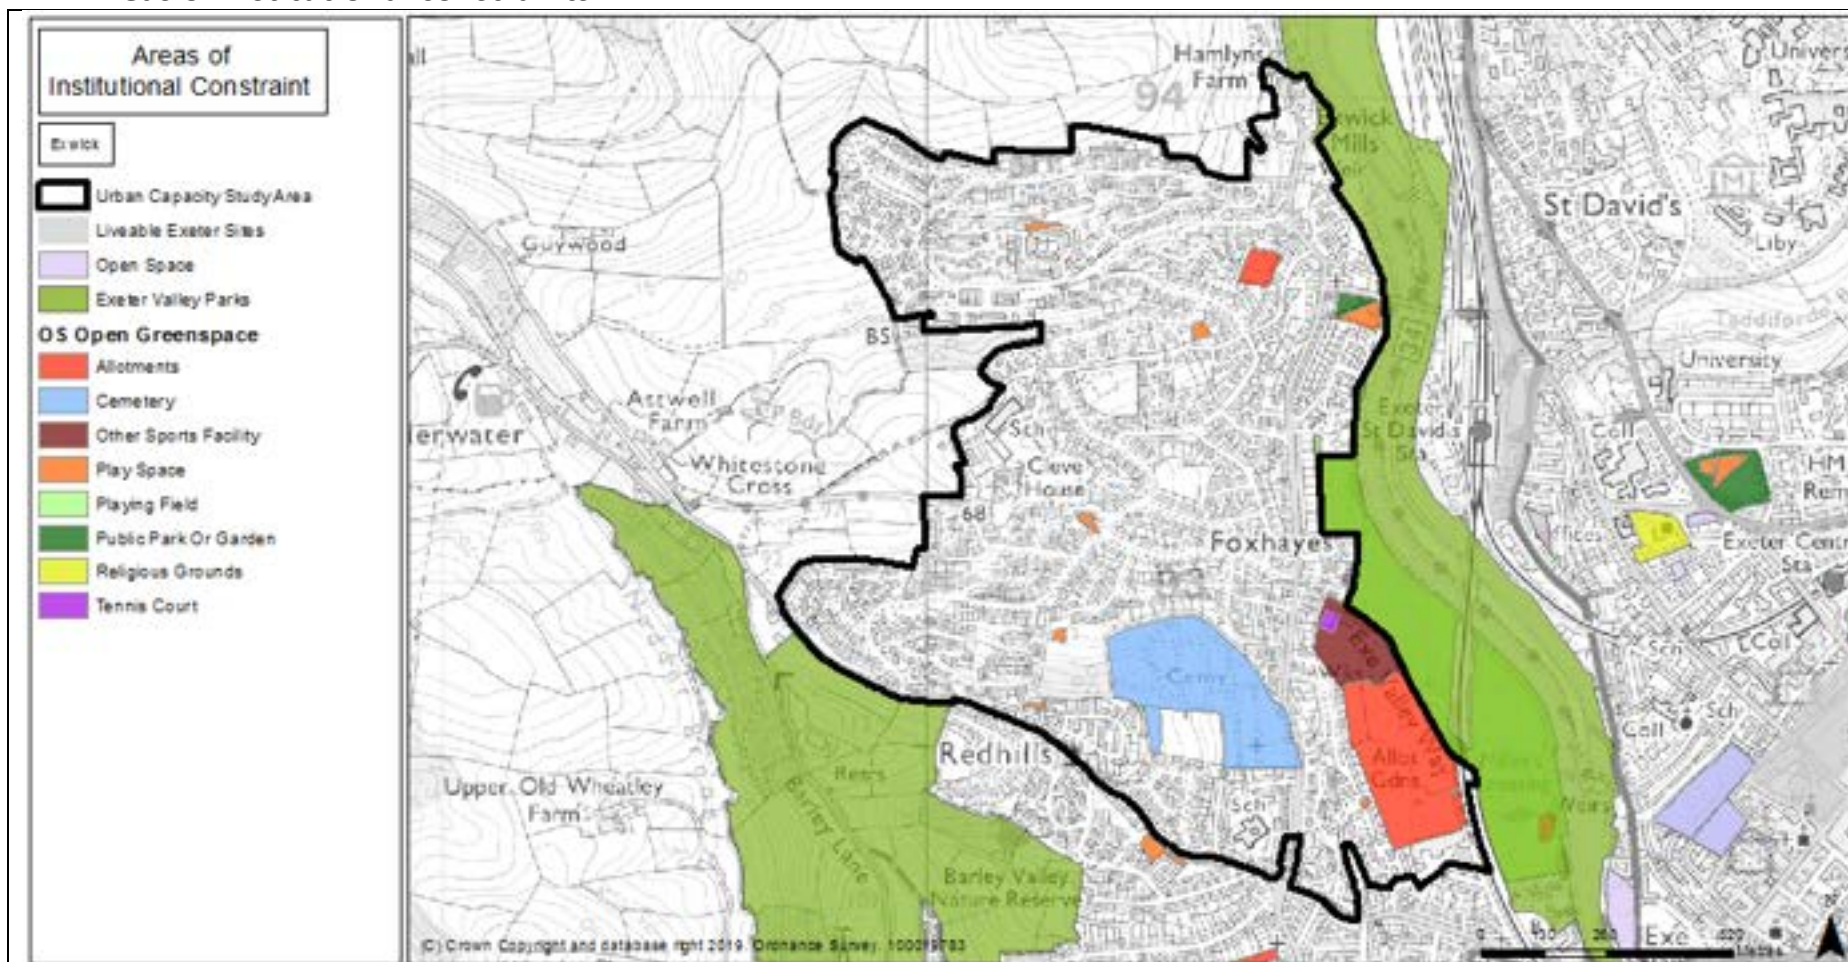

Notes: This assessment covers the area of Exwick in Exeter, which has an estimated population of 8,000 residents. The study area is approximately 140ha and is formed using the MSOA as a basis, snapped to the extent of the existing urban area.

1C – Areas of statutory exclusion

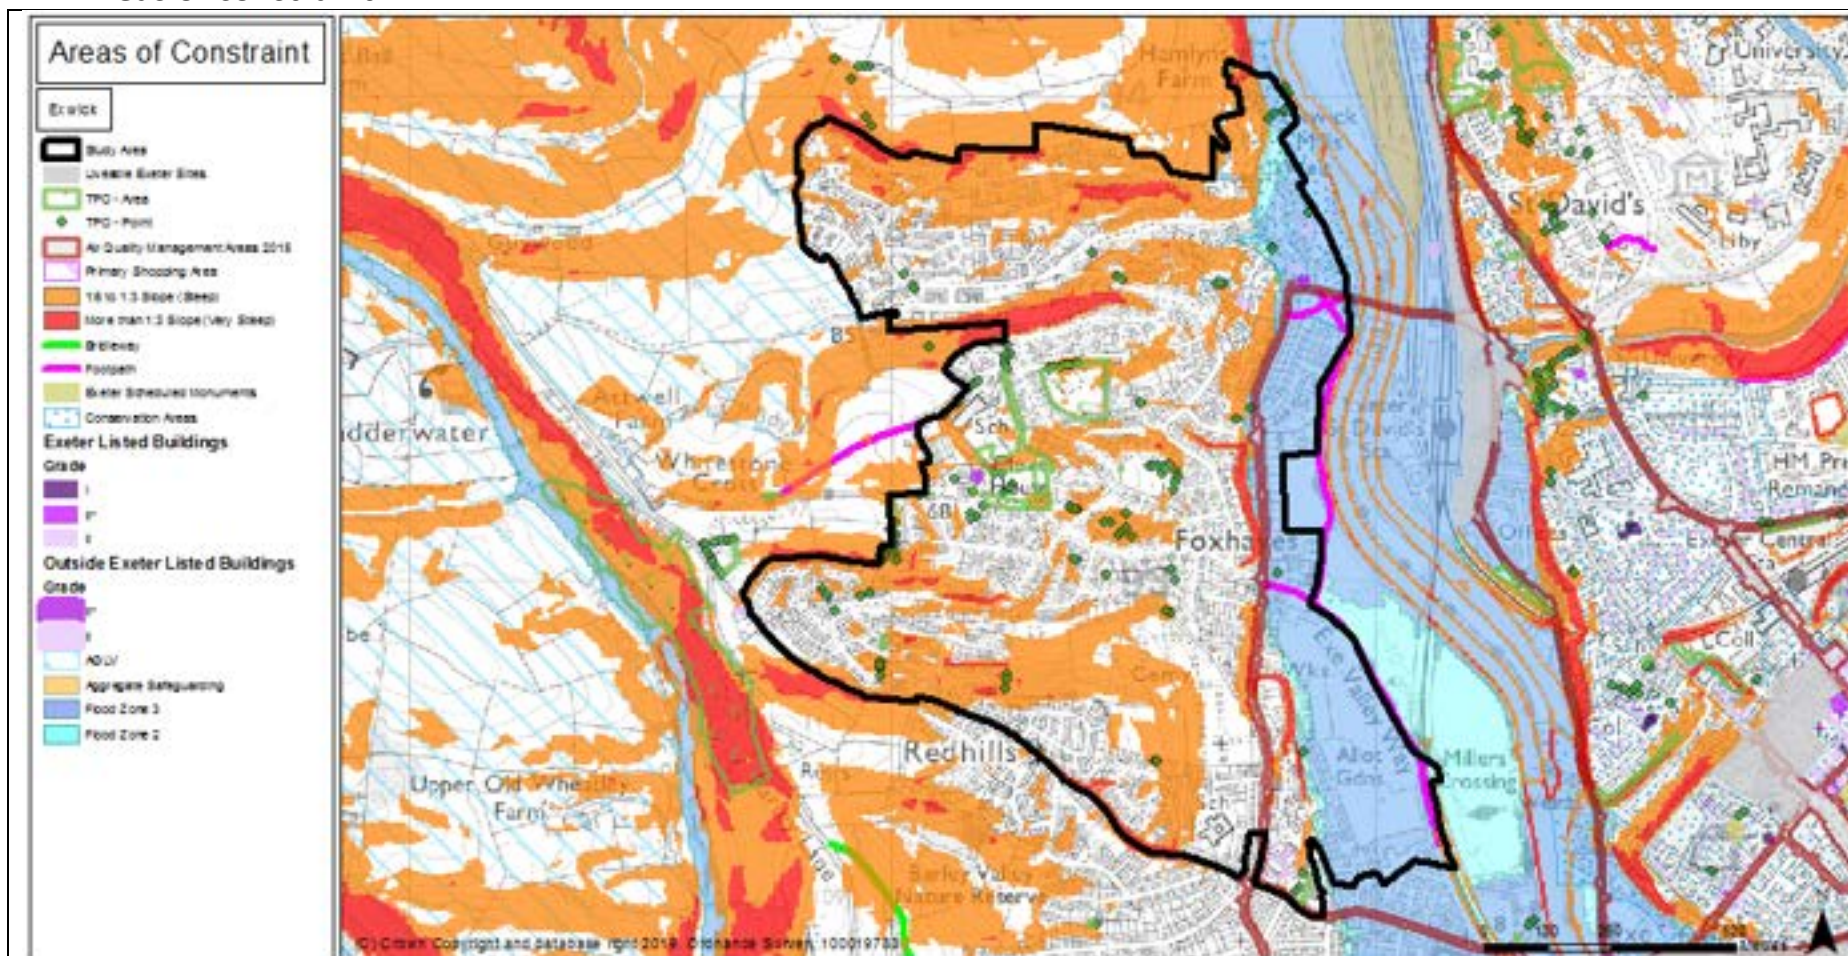

Notes: There are no areas of statutory exclusion located within the study area.

1D – Areas of institutional constraints

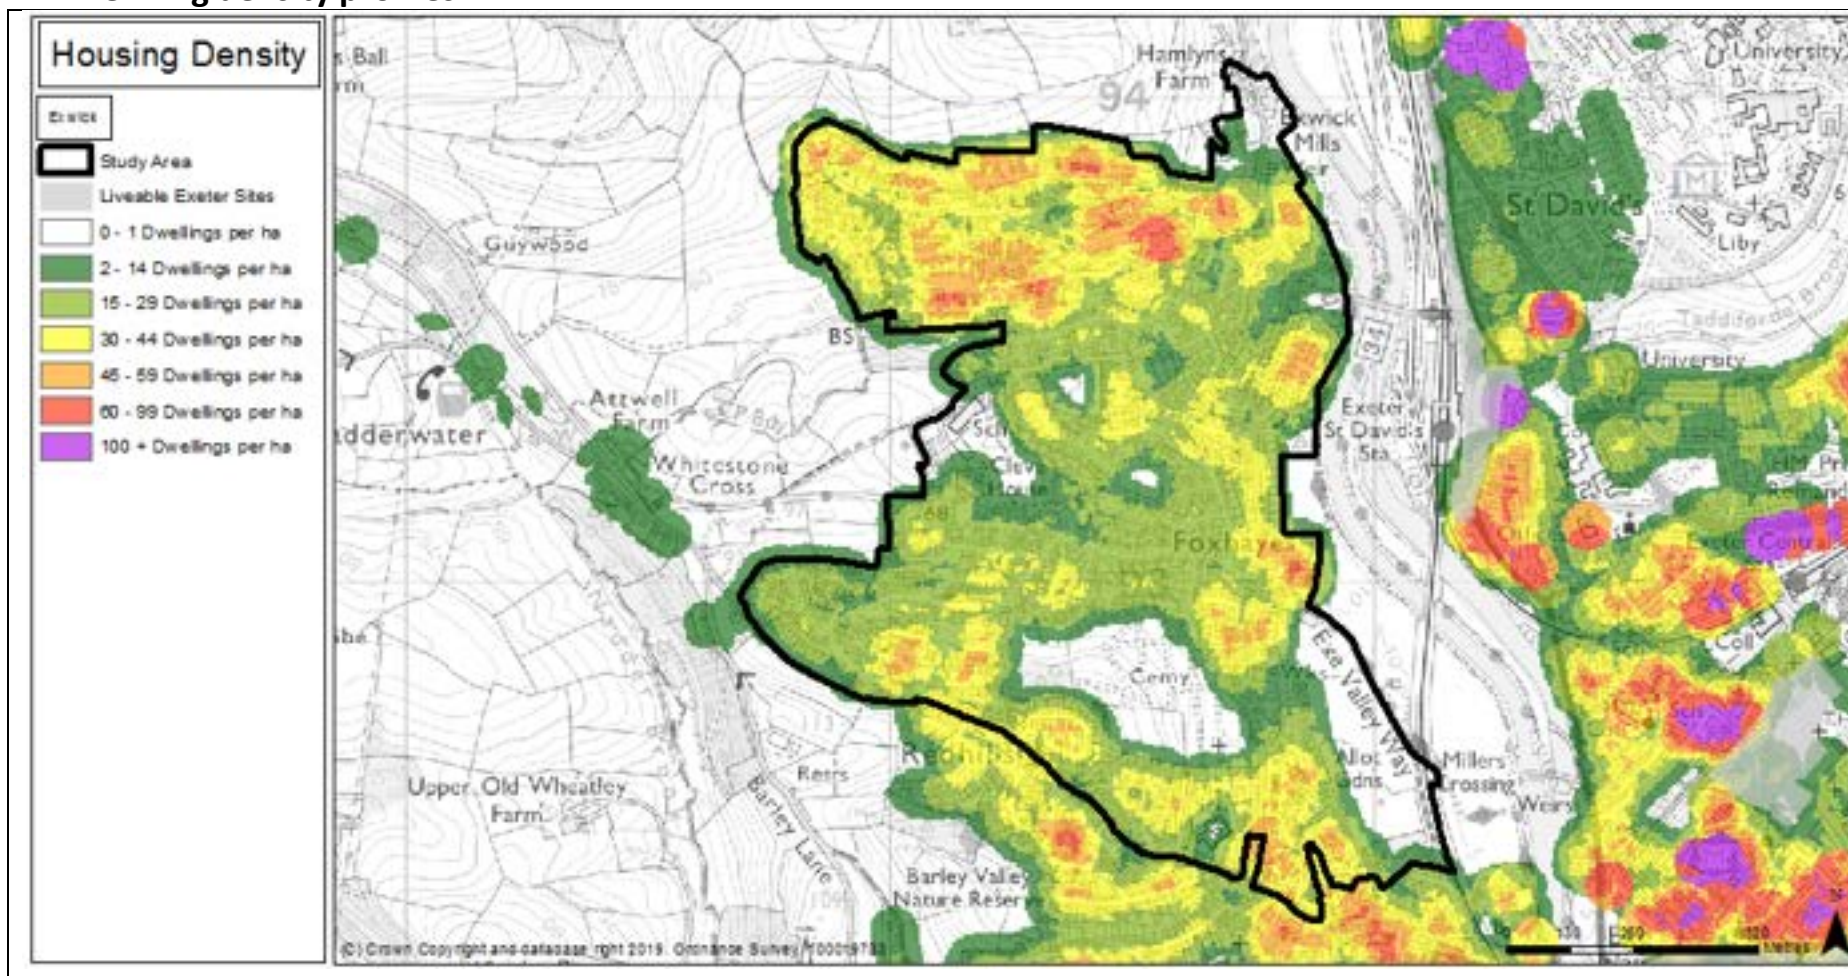

Notes: There are a number of different areas within the study area that derive a specific public benefit from community use. All of these will need to be taken into account during the site identification and assessment stages.

1E – Areas of constraint

Notes: A number of areas of constraint exist within the study area which may impact on the deliverability/desirability of new housing. In particular, a flood zone extends along the river Exe, much of the land is steeply sloped and a number of tree preservation orders are scattered throughout the area.

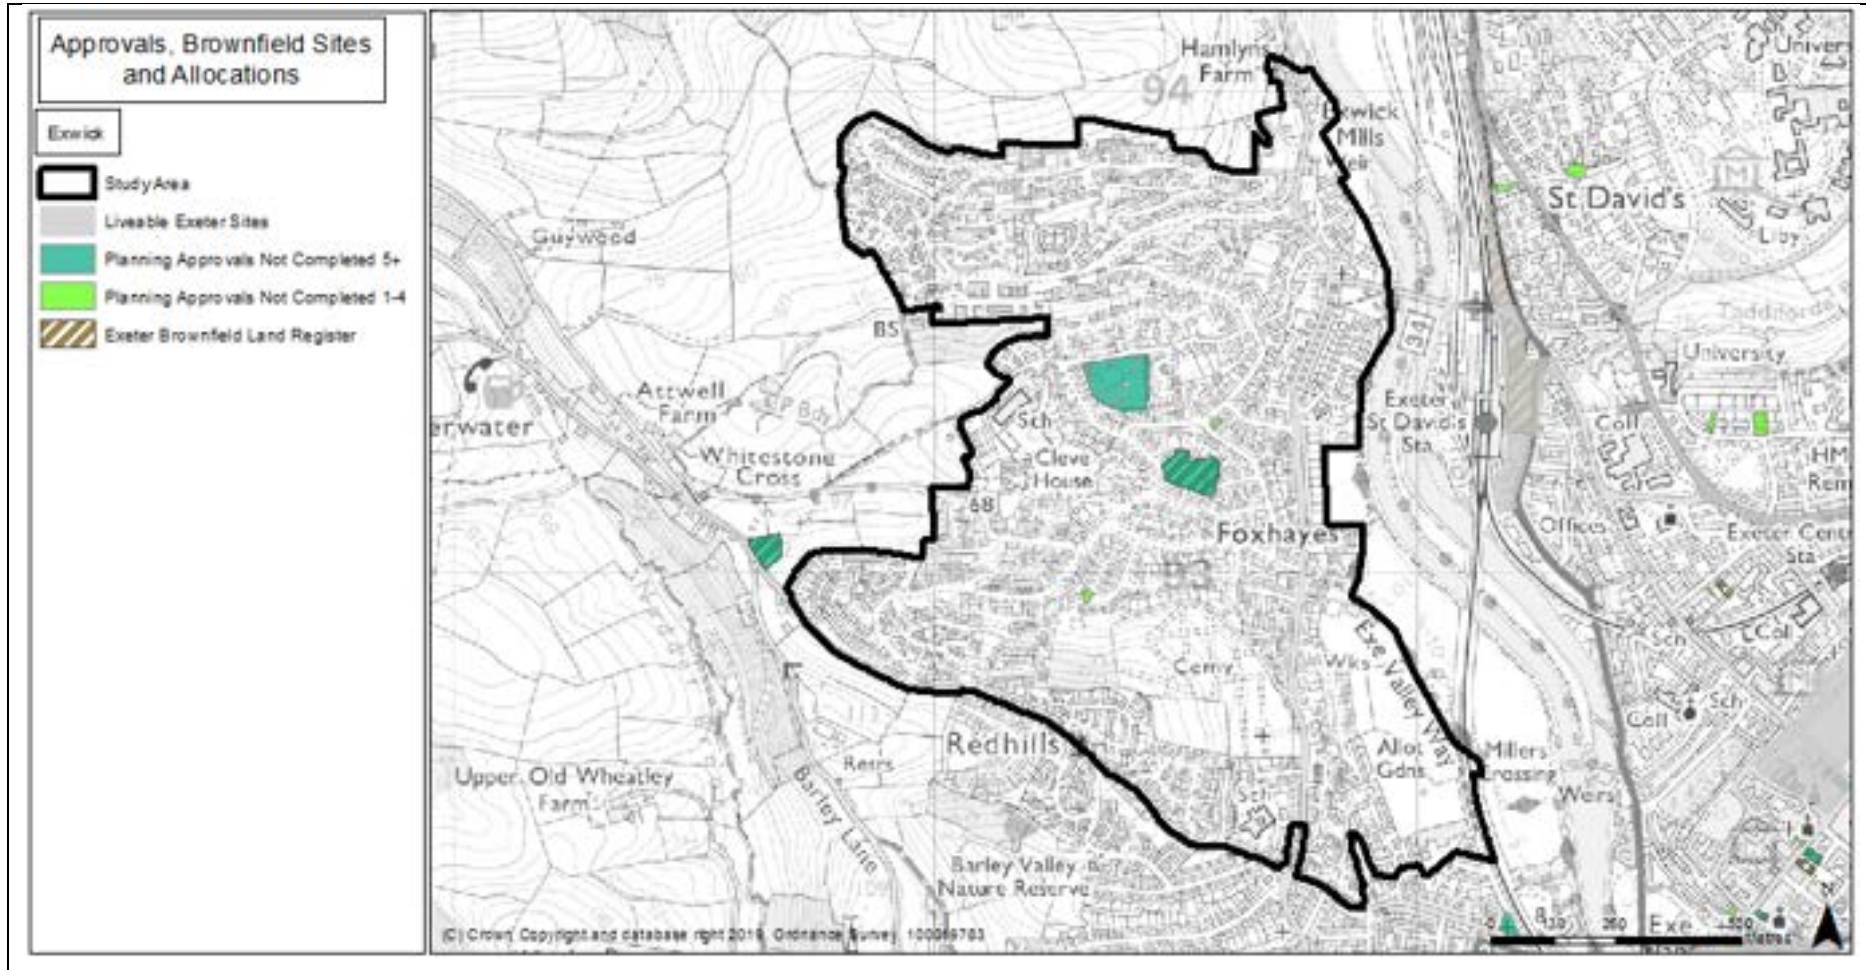

1F – Defining density profiles

Notes: The areas with the highest density are located predominantly in the northern section near Farm Hill and Kinnerton Way and the south near Redhills, and feature a variety of terraced and flats reaching 60+ dwellings per hectare in places. The central area focused around Gloucester Road is made up of largely semi-detached properties between 15-29 dwellings per hectare. A small area of larger detached properties with sizeable gardens are also located along Exwick Road.

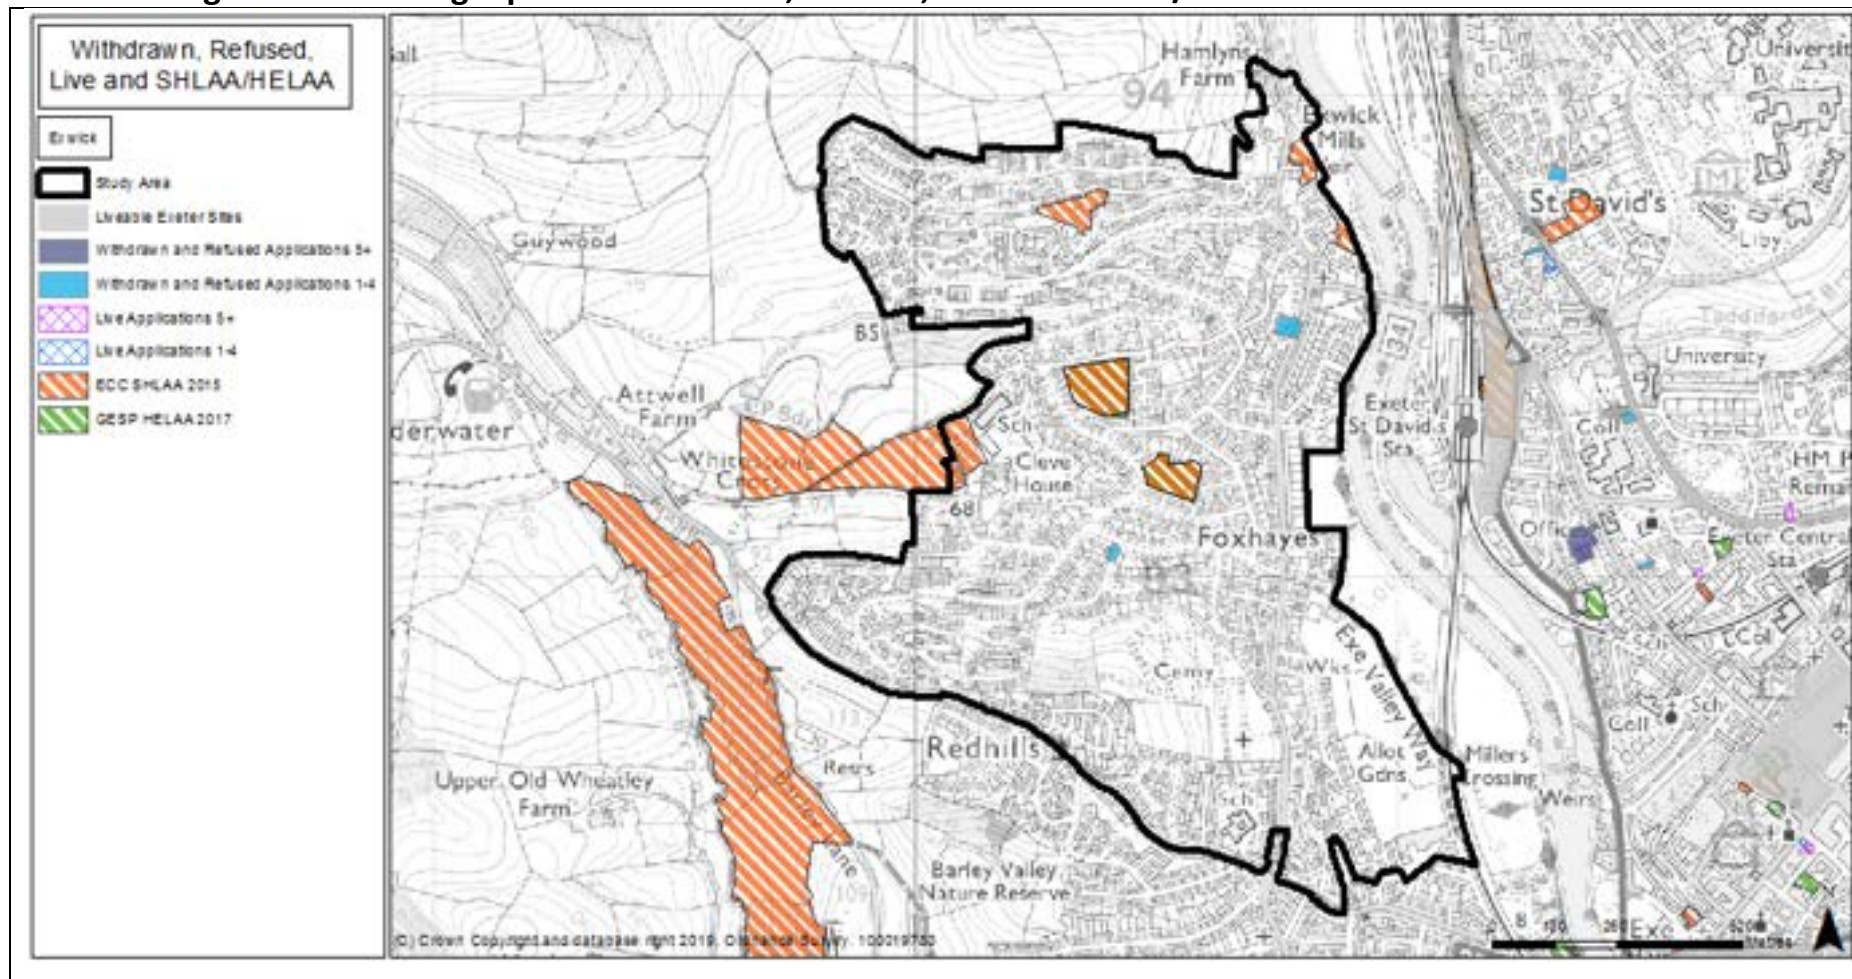

Stage 2 Sources of Supply

2A – Planning and monitoring inputs – Planning Approvals not completed, Brownfield Land Register and Sites Allocated but not completed

Notes: All of the sites below have been excluded from further consideration through the above study, given their existing planning status.

G. Pinhoe

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

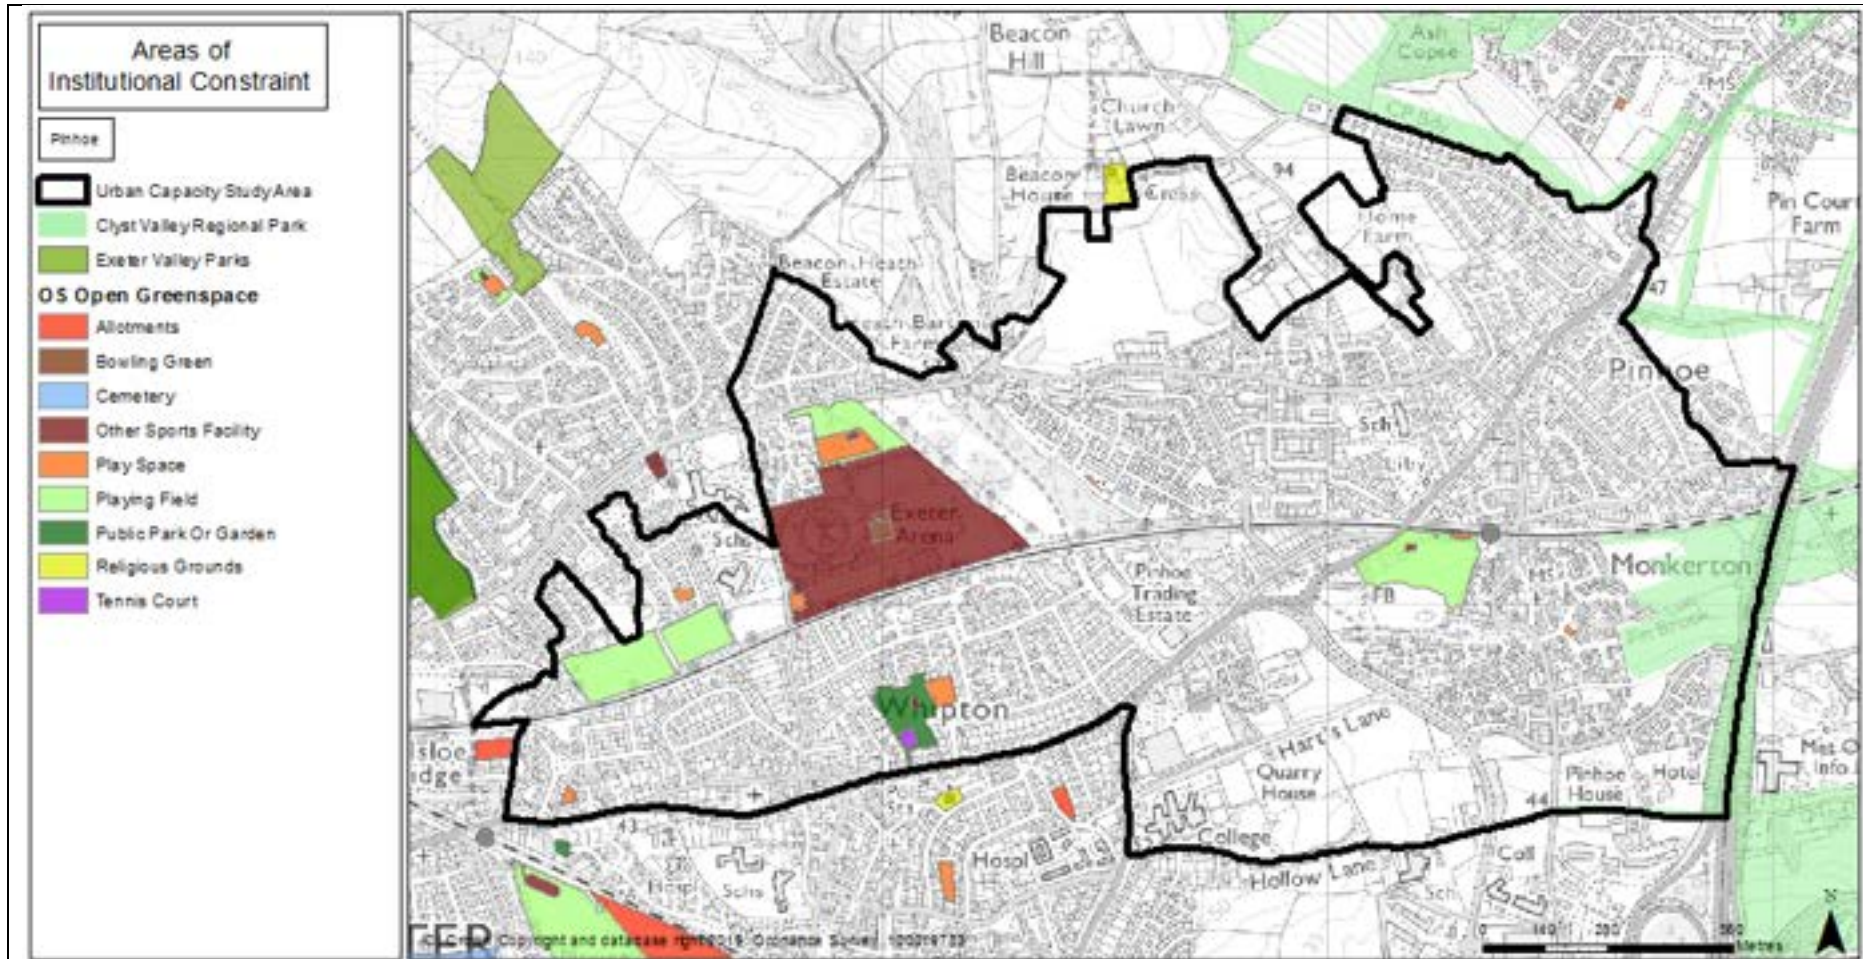

Notes: This study covers the area of Pinhoe, which has a population of 8900. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into Middle Super Output Areas (MSOAs) within the built up area boundary.

1C – Areas of statutory exclusion

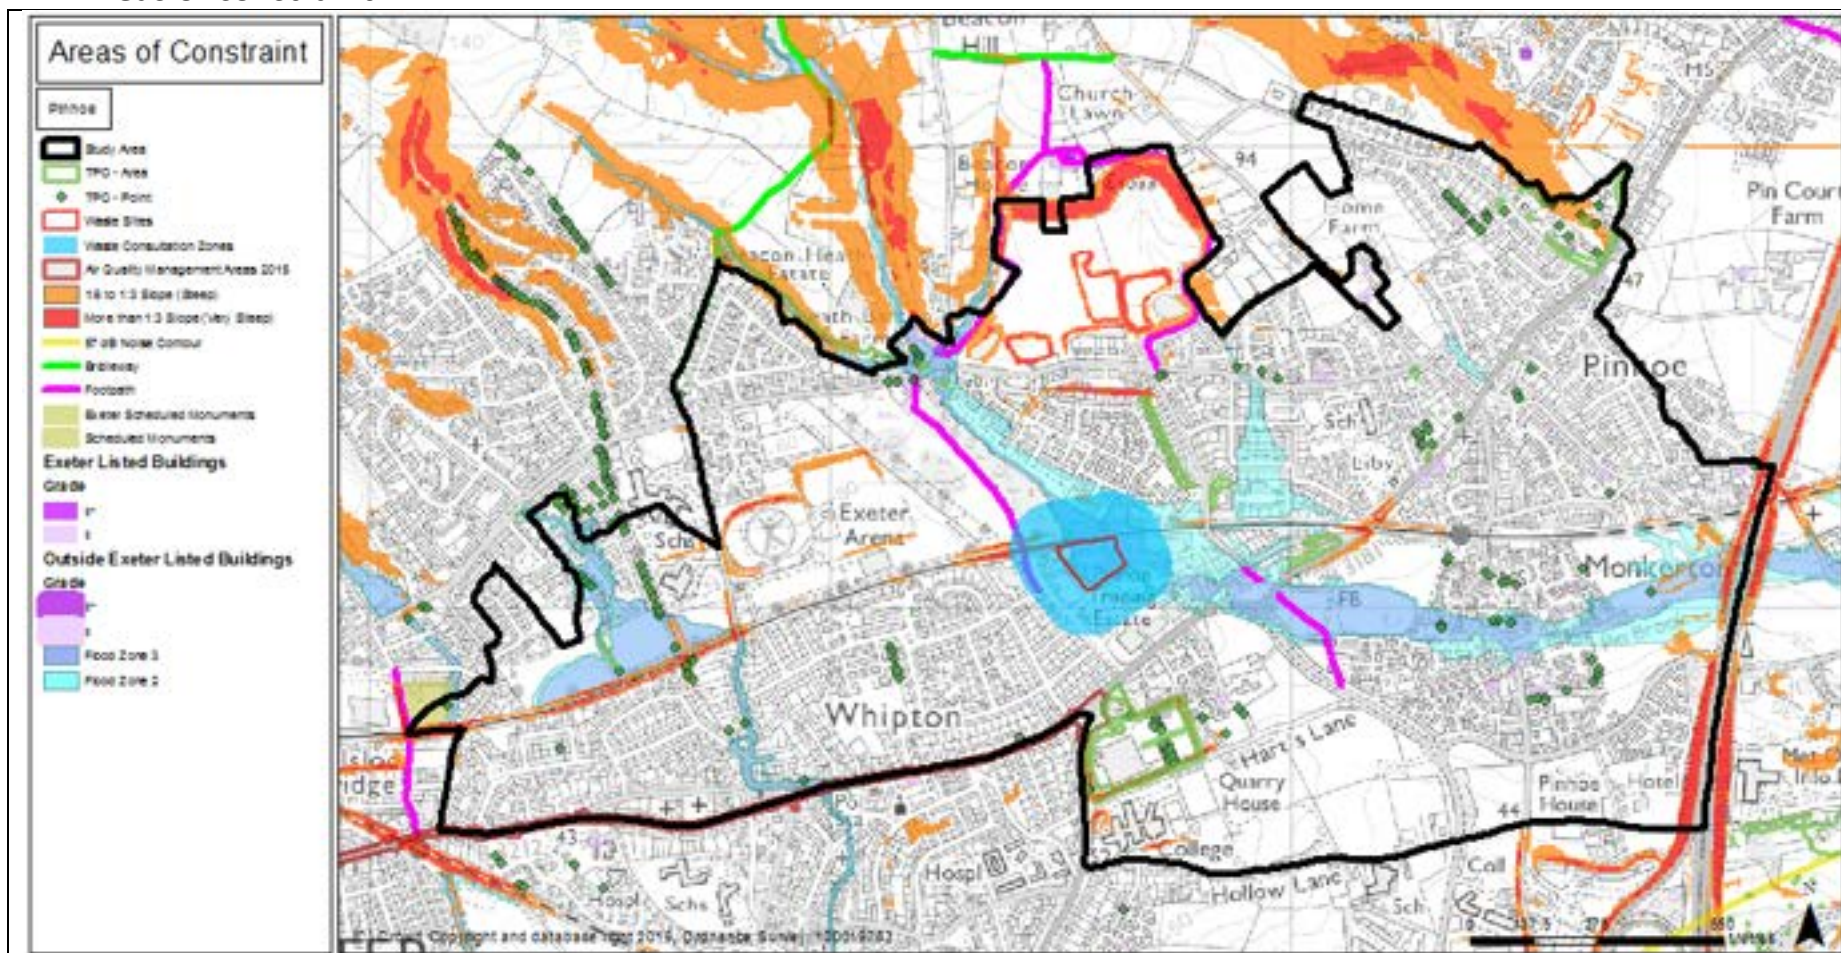

Notes: The study area does not contain any areas of statutory exclusion.

1D – Areas of institutional constraints

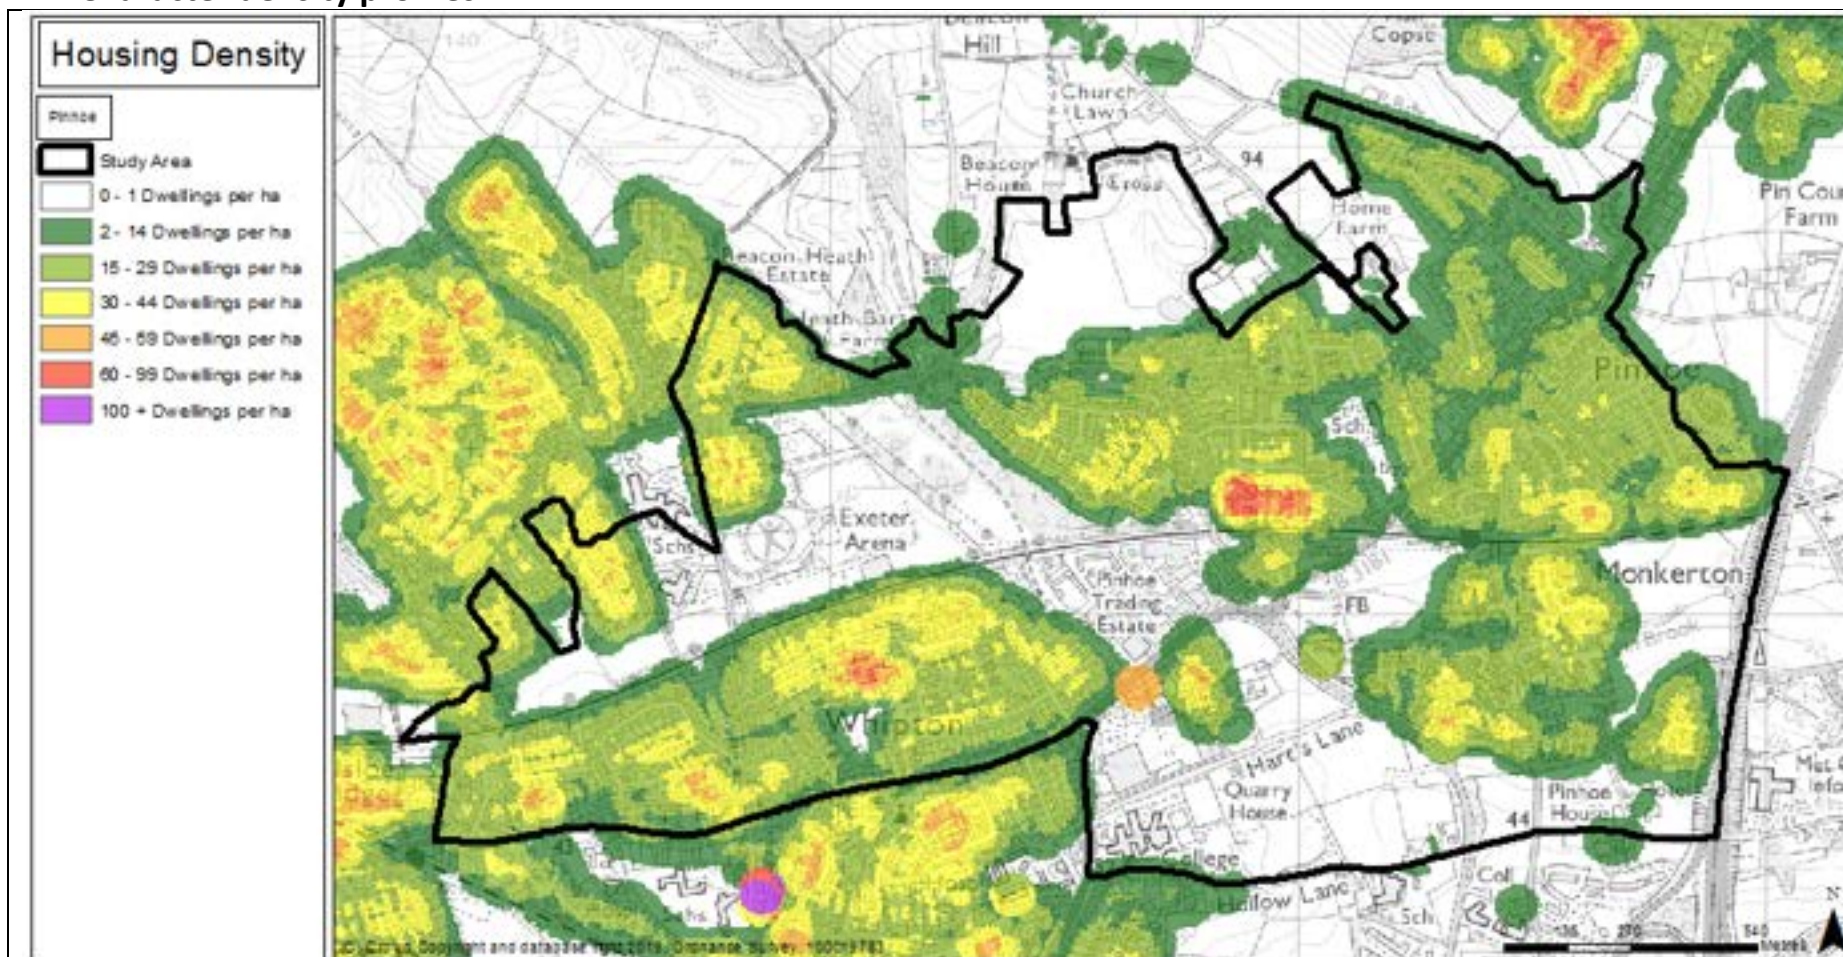

Notes: There are a number of different areas within the study area that derive a specific public benefit from community use. All of these will need to be taken into account during the site identification and assessment stages. These areas include Exeter Arena Athletics Stadium, playing fields, Summerway Park and play area, and a section of Clyst Valley Regional Park.

1E – Areas of constraint

Notes: A number of areas of constraint exist within the study area which may impact on the deliverability/desirability of new housing. In particular, a waste site (and consultation zone), an air quality management area on Pinhoe Road, a small number of listed buildings and part of St Katharine’s Priory scheduled monument, flood zone 3, and TPOs.

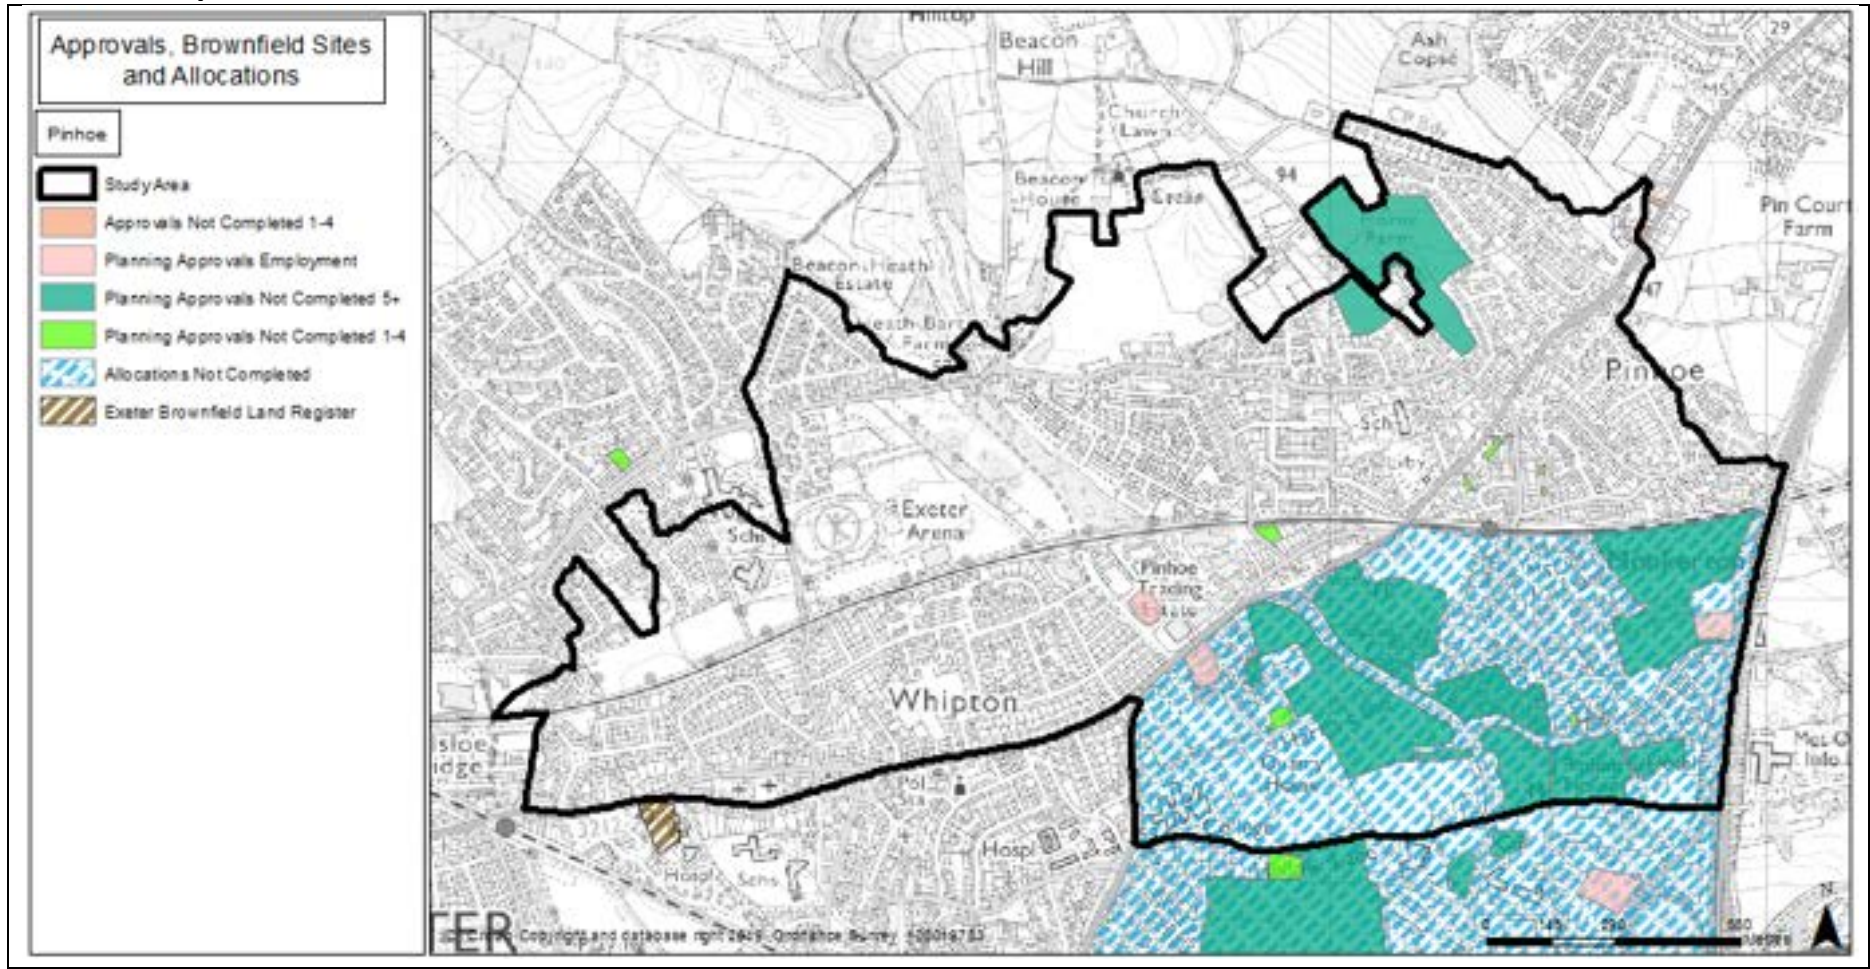

1F – Character density profiles

Notes: Pinhoe includes large areas in non-residential uses, including Pinhoe trading estate and Exeter Arena Athletics Stadium. The residential areas are characterised by large areas of patchy low to medium density housing, with smaller areas of higher densities exceeding 45 dph.

Stage 2 Sources of Supply

H. St James

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

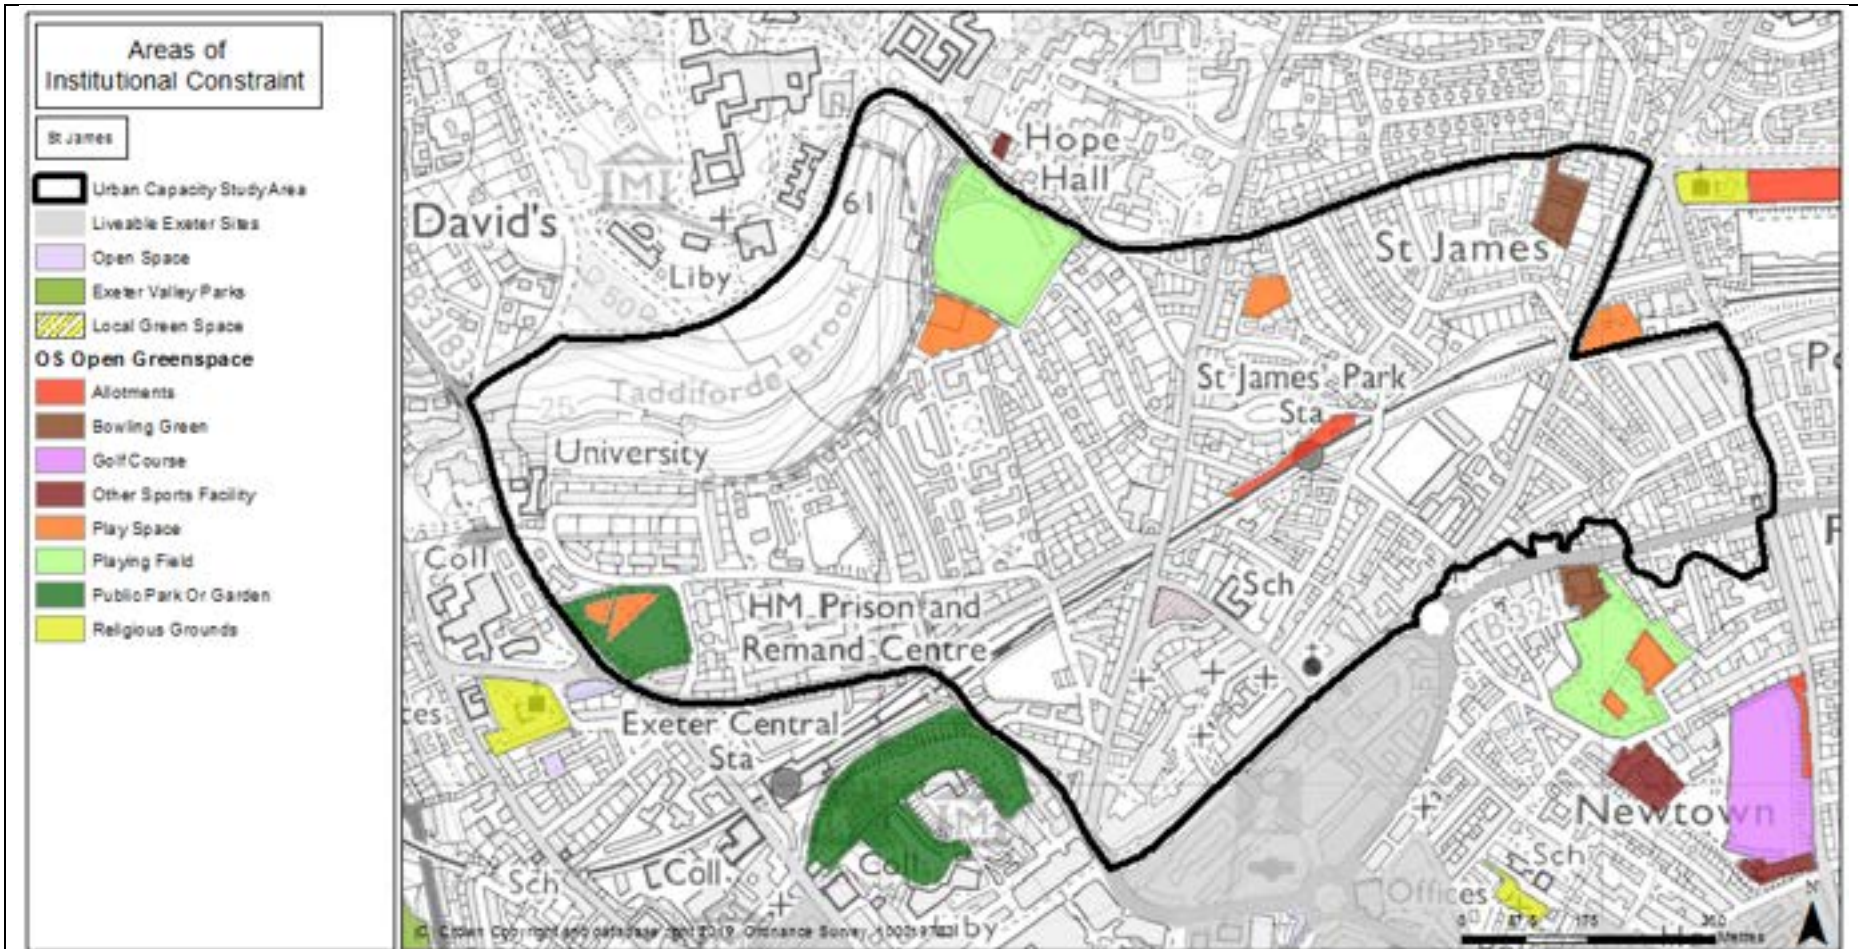

Notes: This study covers the Middle Super Output Area (MSOA) of St James. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into MSOAs within the built up boundary, which excludes Valley Parks and previously undeveloped land predominantly defined by the landscape setting area boundaries set out in the Local Plan 1995-2011. Pop: 9500 (2017). Size 104ha

1C – Areas of statutory exclusion

Notes: No areas of statutory exclusion are located within this study area

1D – Areas of institutional constraints

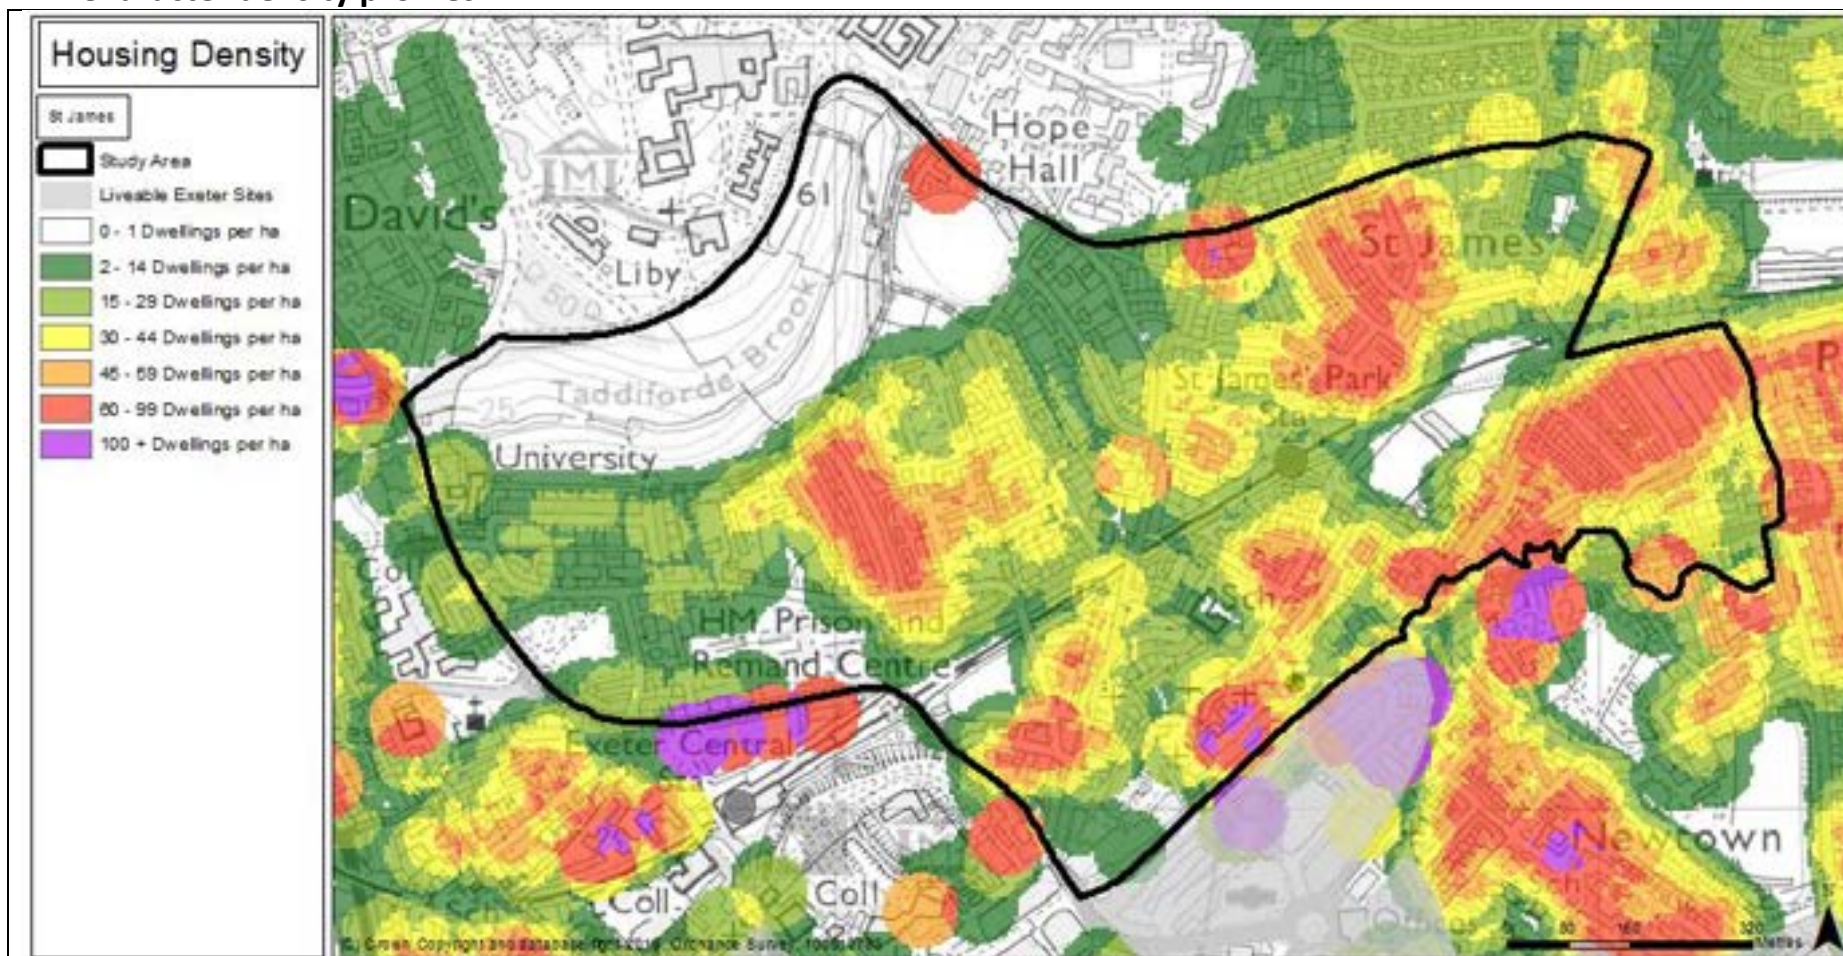

Notes: There are a number of different areas of community use within this site that derive a specific public benefit from community use, including Exonia Bowling Club, Exeter Cricket Club, Bury Meadow Park, play spaces and St James allotments. All of these will need to be taken into consideration during site identification and assessment.

1E – Areas of constraint

Notes: A number of areas of constraint exist within the St James study area which may impact upon the deliverability of new housing. Areas of constraint include: St David's, Longbrook, and St Sidwells conservation areas, Danes Castle scheduled monument,, a number of tree preservation orders, grade II and II* listed buildings, air quality management areas 2015, and public rights of way. There is an area located within flood zones 2 and 3 around Taddiforde Brook. Areas of steeper ground fall along the railway, and the greenspace south of Taddiforde Brook is more than 1:3 with the area to the north predominantly 1:6-1:3.

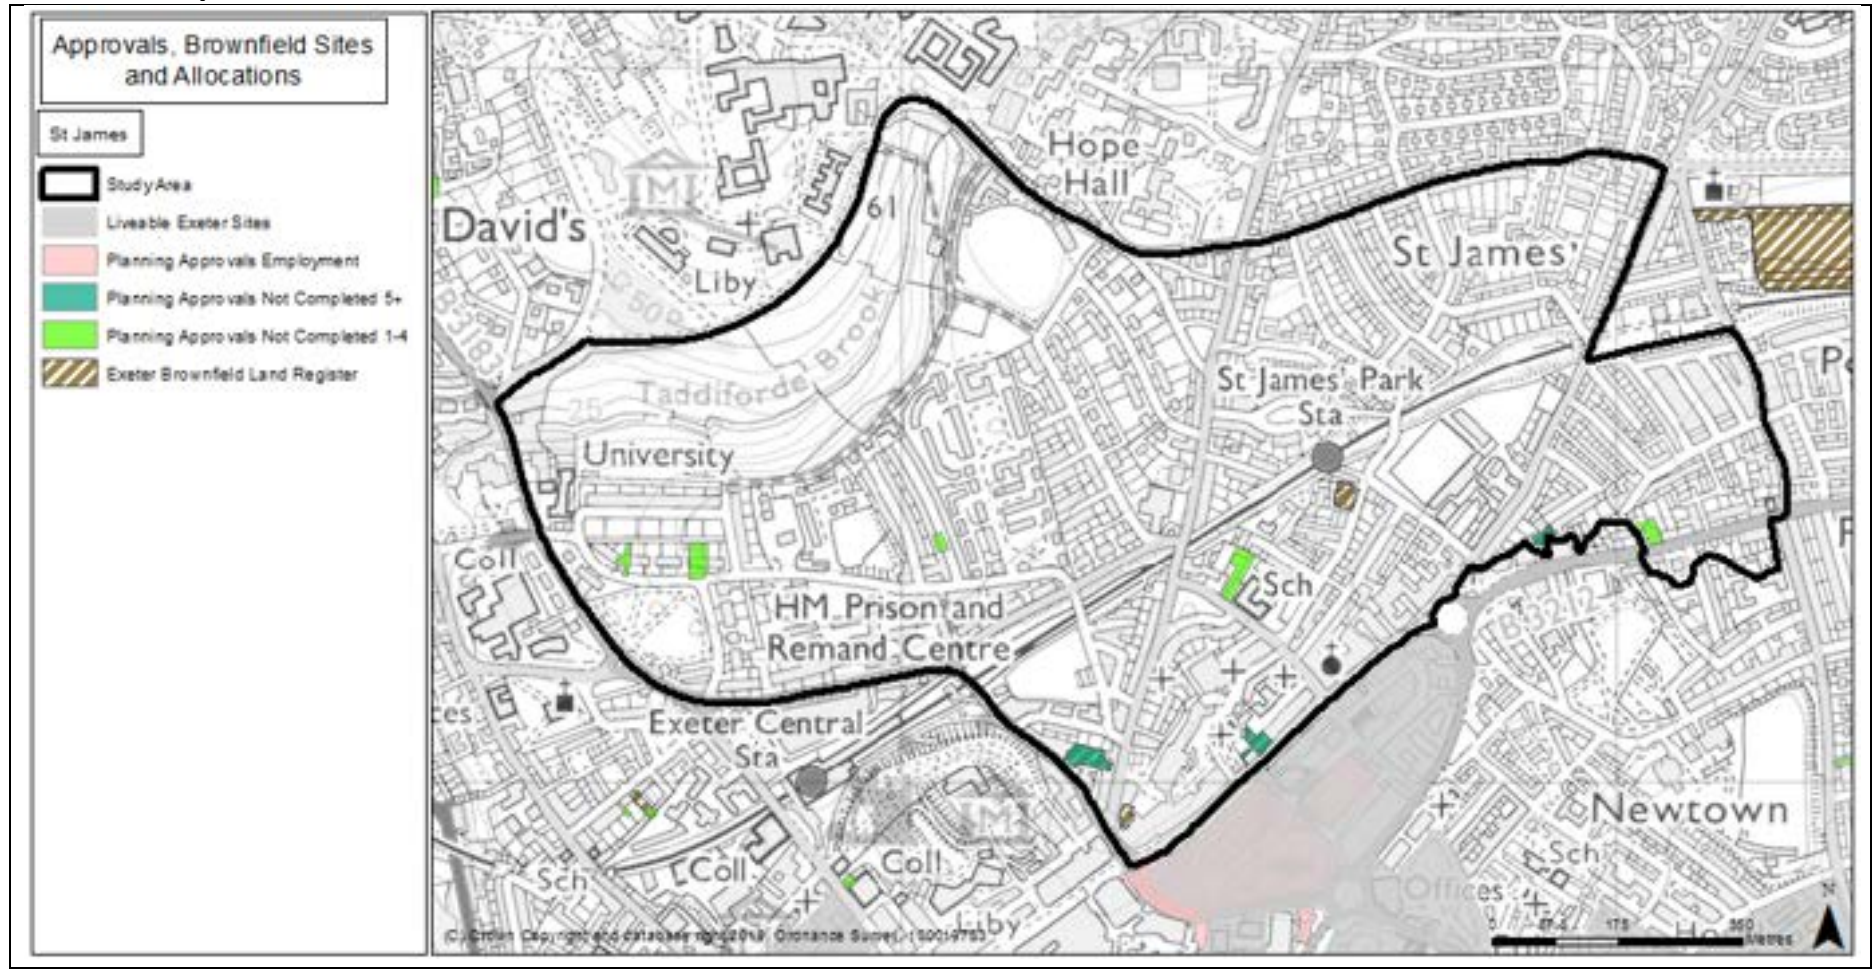

1F – Character density profiles

Notes: The areas of highest density (60-100+ dwellings per hectare) are located around purpose built student accommodation, flats around Sidwell Street, Acland Road, Longbrook Terrace, and the terraces around Victoria Street and Rosebery Road to the West of the study area, Hoopern Street towards the East. Lower density (2-44 dwellings per hectare) typifies the rest of the residential area of St James with many detached properties. Areas of very low density (0-1 dwellings per hectare) include Bury Mead Park, Taddiforde Brook greenspace, Exeter Prison, Exeter Cricket Club and St James' Park Football Stadium.

I. St Leonards

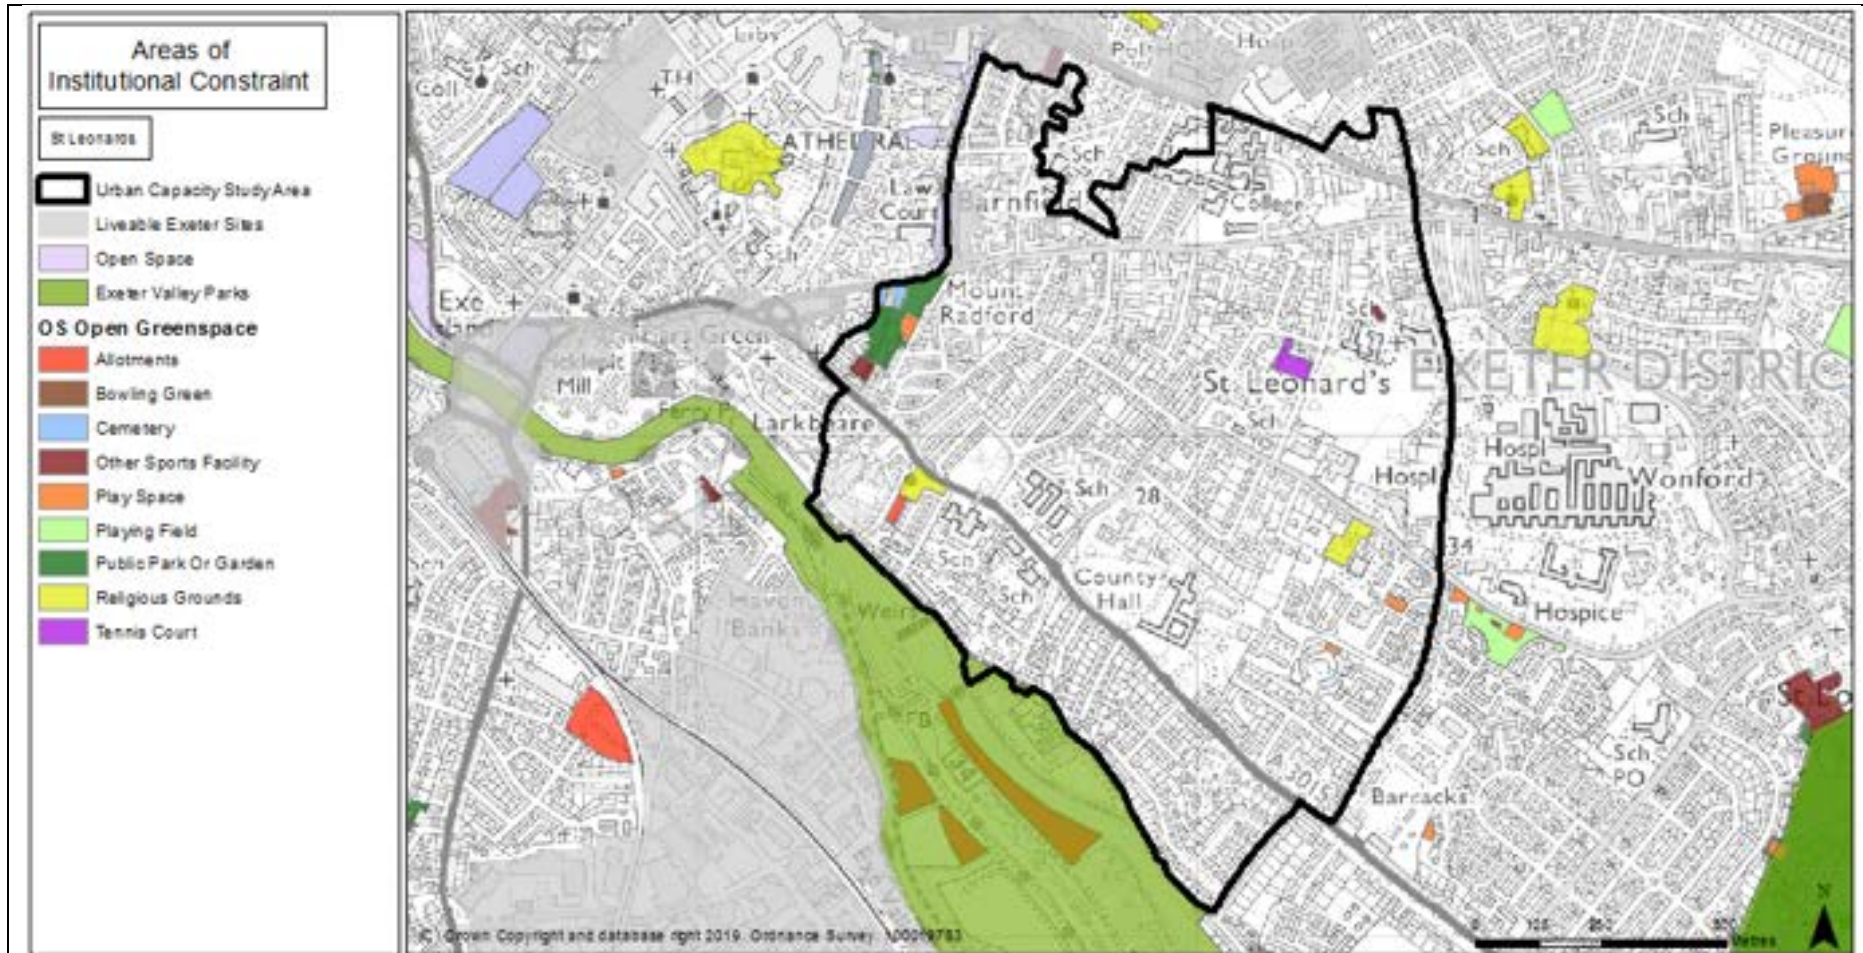

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

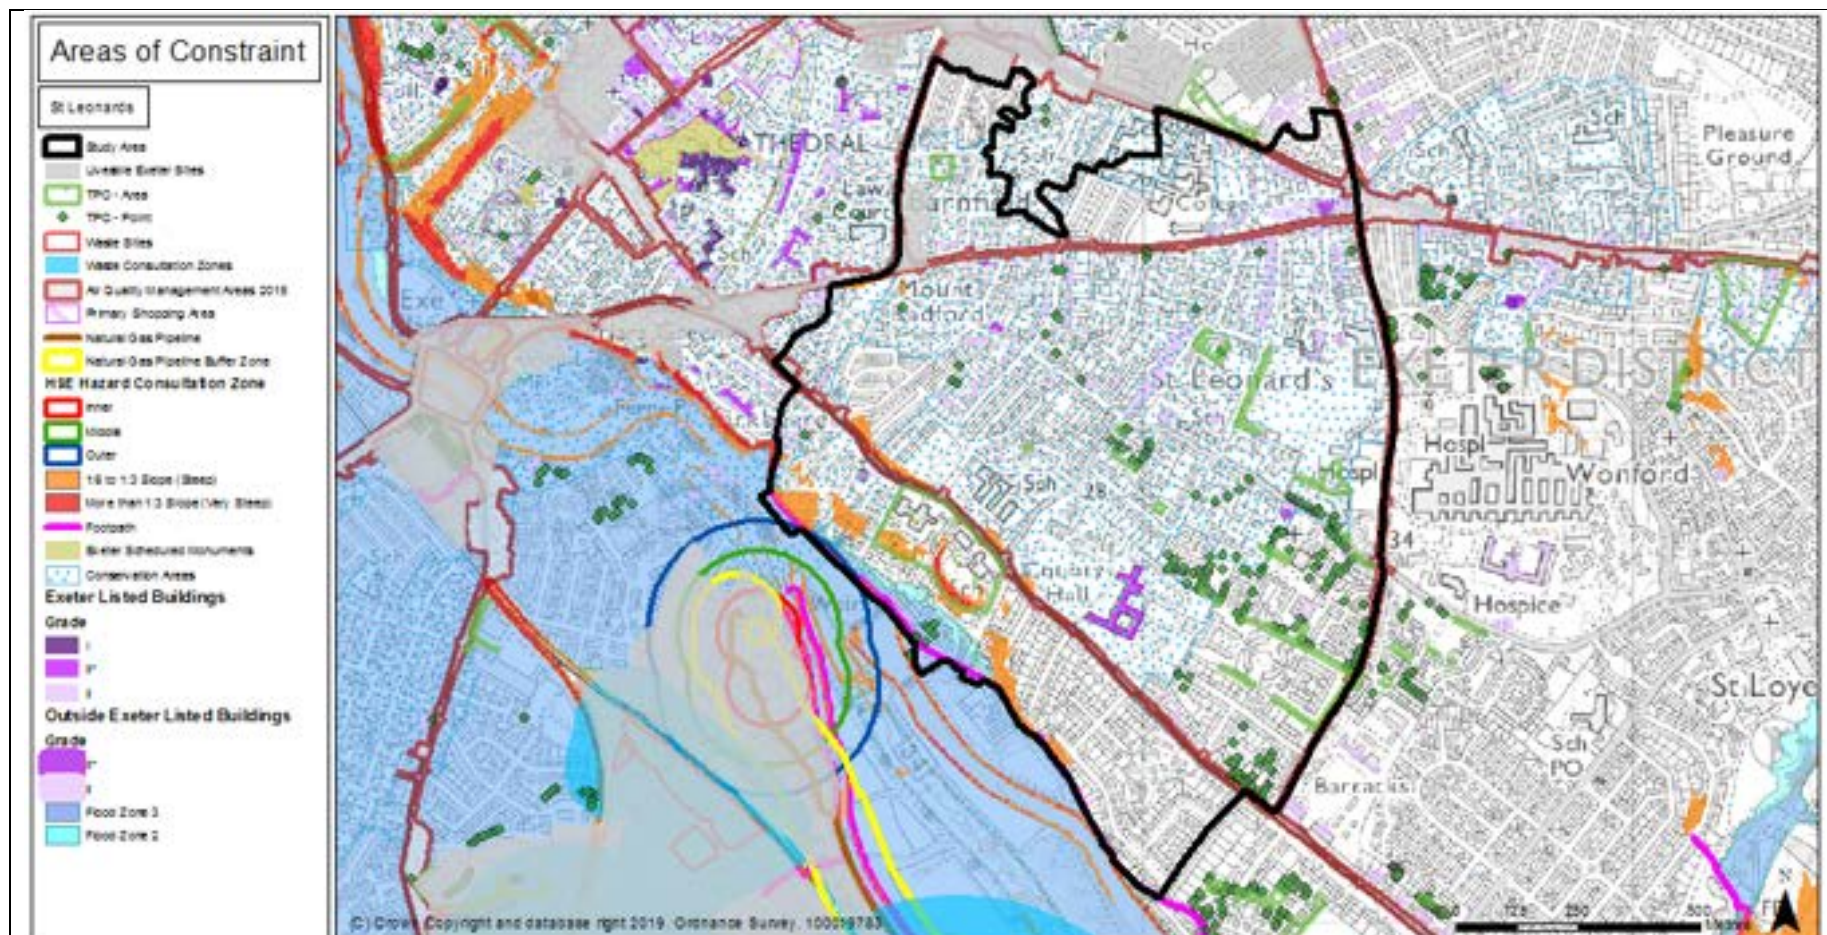

Notes: This assessment covers the area of St Leonard's. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into Middle Super Output Areas (MSOA) within the existing urban area. Population around 6,600. Area approximately 138ha.

1D – Areas of institutional constraints

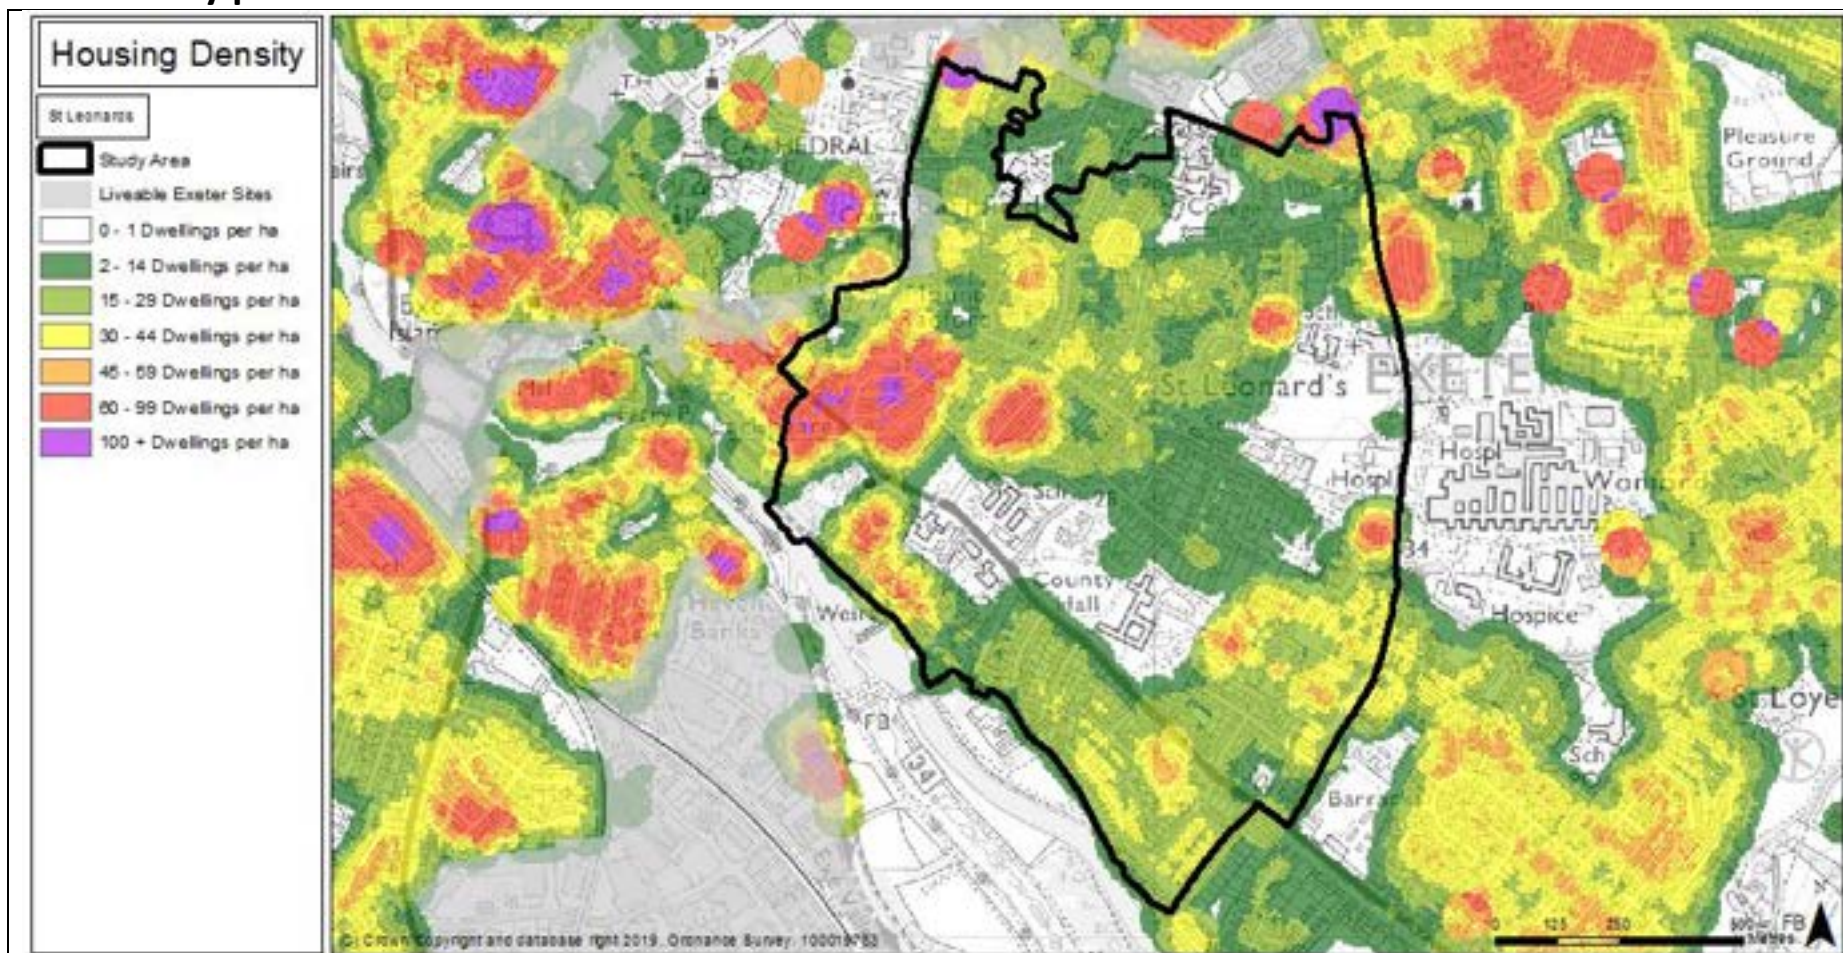

Notes: There are a number of different areas within this study area that derive a specific public benefit from community use. These include small sections of Riverside Valley Park, other public parks and play space, sports facilities, and religious grounds. All of these will need to be taken into consideration during site identification and assessment.

1E – Areas of constraint

Notes: A number of areas of constraint exist within the St Leonard’s study area which may impact upon the deliverability of new housing. Areas of constraint include: St Leonard’s conservation area, a number of tree preservation orders, grade II and II* listed buildings, and air quality management areas, and public right of way along the southern boundary. There is also a section of the study area that is within Flood Zone 2 and 3, and a very small section in the outer HSE Hazard Consultation Zone.

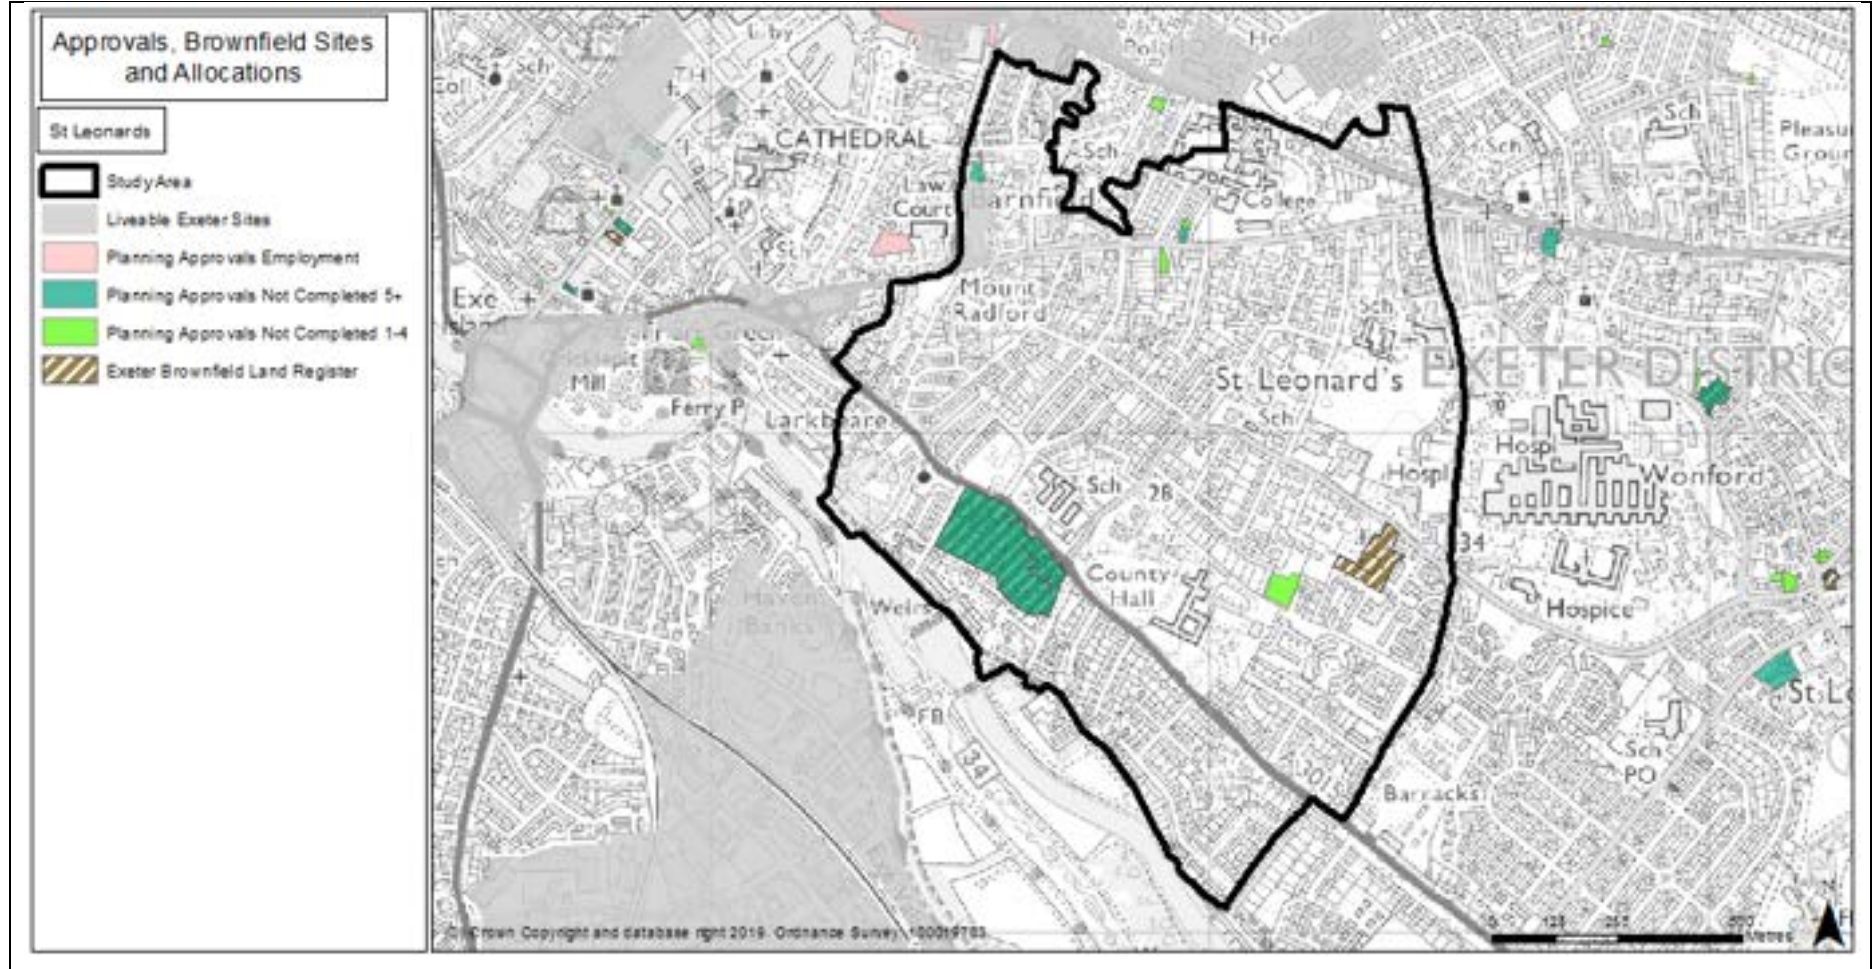

1F – Density profile

Notes: The areas of highest density (60+ dwellings per hectare) are the terraces around Roberts Road, Radford Road, West Grove Road; flats opposite Exeter School on Victoria Park Road, Eaton House (Heavitree Road/Western Way) and Geneva Close. The areas of lowest density (0-1 dwellings per hectare) are the numerous education campuses, Devon County Hall, Larkbeare House Registration Services, Belle Isle Park and the Nuffield Hospital. These are unlikely to have much scope for residential intensification. The majority of the St Leonards area is of a relatively low density characterised by detached dwellings with sizeable gardens.

3A – Survey (ii) Rejected sites

Notes: The following sites have been excluded from further consideration.		
Site Description / Address	Reference	Reasons for rejection
Land Off St Leonards Road, Mount Radford Lawn, EX2 4ND	UCS_EC_SL_02	Playing field / sports facility therefore unavailable as contrary to Development Plan and Exeter City Council's Active and Healthy Lifestyle Strategies
Gras Lawn open green space and play space, Gras Lawn, EX2 4SZ	UCS_EC_SL_04	Designated open/green space to protect setting of listed buildings therefore unavailable and not capable of supporting development of 5+ dwellings
Devon County Hall, Topsham Road, EX2 4QD	UCS_EC_SL_05	Site in active use and unavailable for development.
Larkbeare House, Devon Registration Service, 1 Larkbeare Road, Topsham Road, EX2 4NG	UCS_EC_SL_06	Site in active use and unavailable for development. Conservation area and tree preservation orders would limit development to below 5 dwellings.
Bull Meadow Recreation Ground, Bull Meadow Road / Temple Road, EX2 4JF	UCS_EC_SL_08	Park / playing field / sports facility therefore unavailable as contrary to Development Plan and Exeter City Council's Active and Healthy Lifestyle Strategies
22-32A Magdalen Road, EX2 4TD	UCS_EC_SL_10	Already high density therefore limited capacity.

These settings will need to be respected/preserved. Some potential for buried remains in undeveloped parts of the site (mainly car parking). - Conservation - The site is not in a Conservation Area. The setting of the Listed Building in Fleming Way, to the south-west of the site, will need to be preserved. - Flood and Water – Possibly developable. Some risk of surface water flooding along through the site. Also an ordinary watercourse is culverted through the site. Exact alignment unknown but could be a constraint depending on condition. Consideration required so development is not detrimental to culverted watercourse condition or future maintenance access. Consultation would be required with DCC Flood Risk regarding any works to the culvert. Development should take care not to encroach into existing surface water flow pathway. J. St Thomas

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

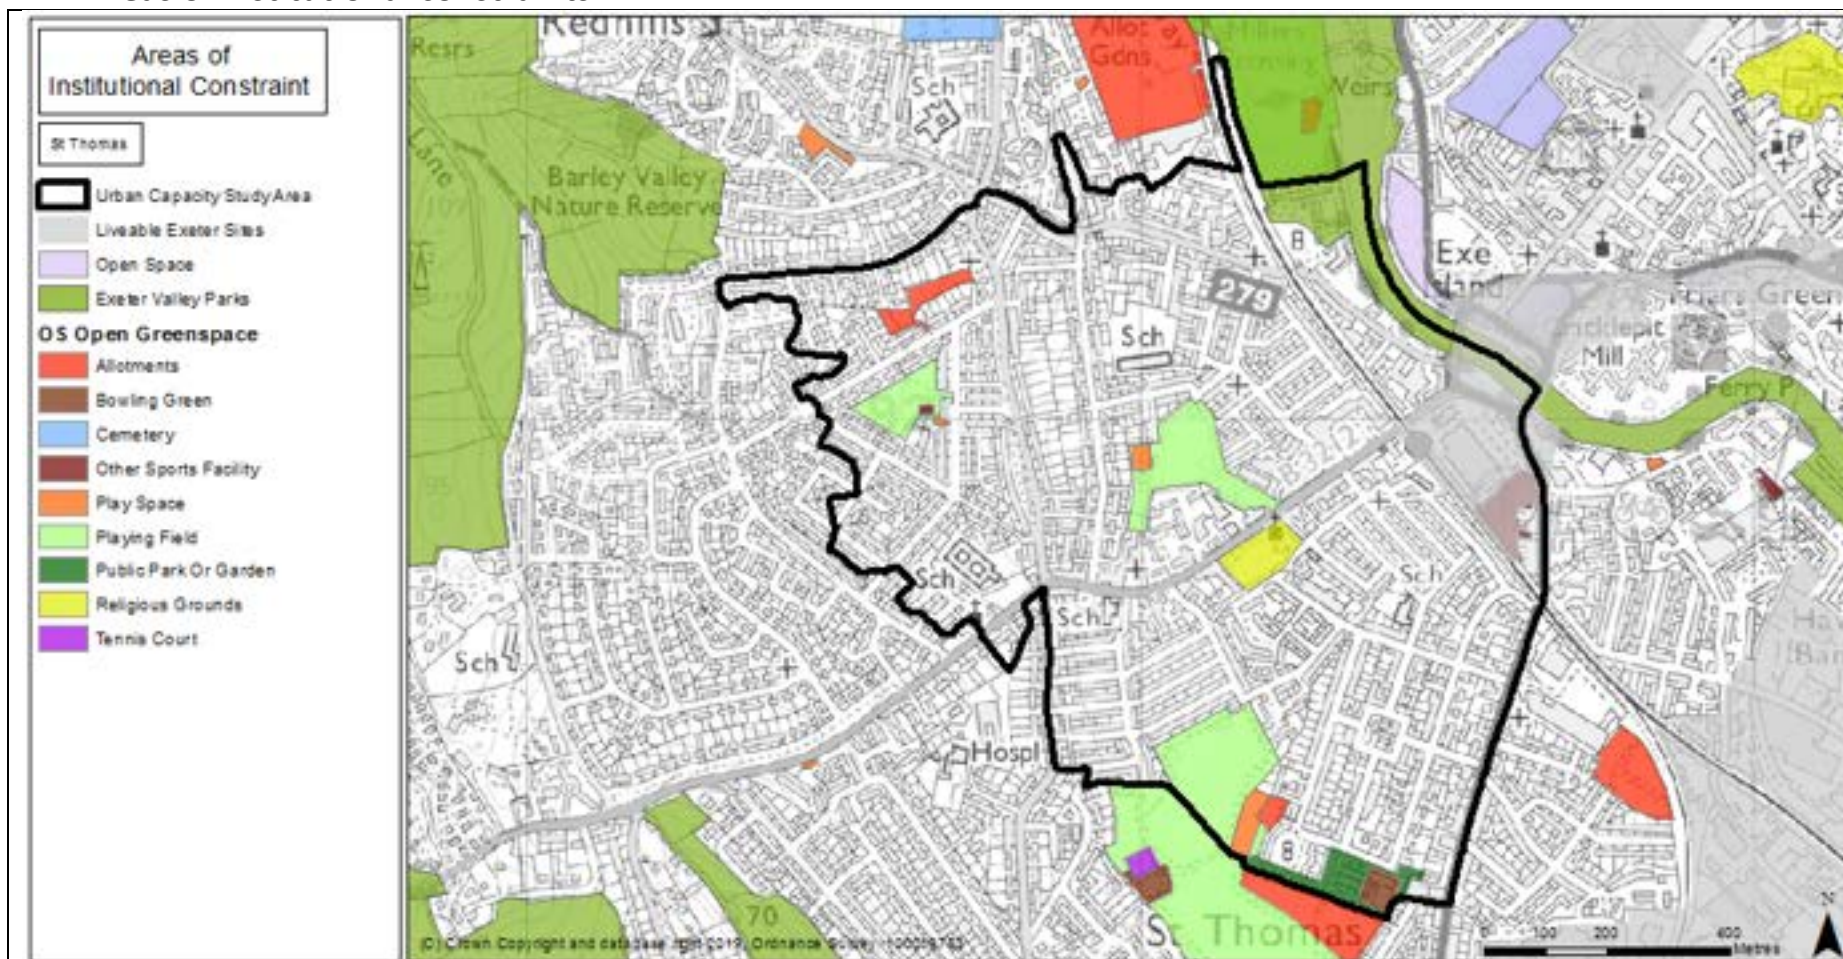

Notes: This study covers the area of St Thomas. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into Middle Super Output Area (MSOA) within the existing urban area. St Thomas has a population of 8288.

1C – Areas of statutory exclusion

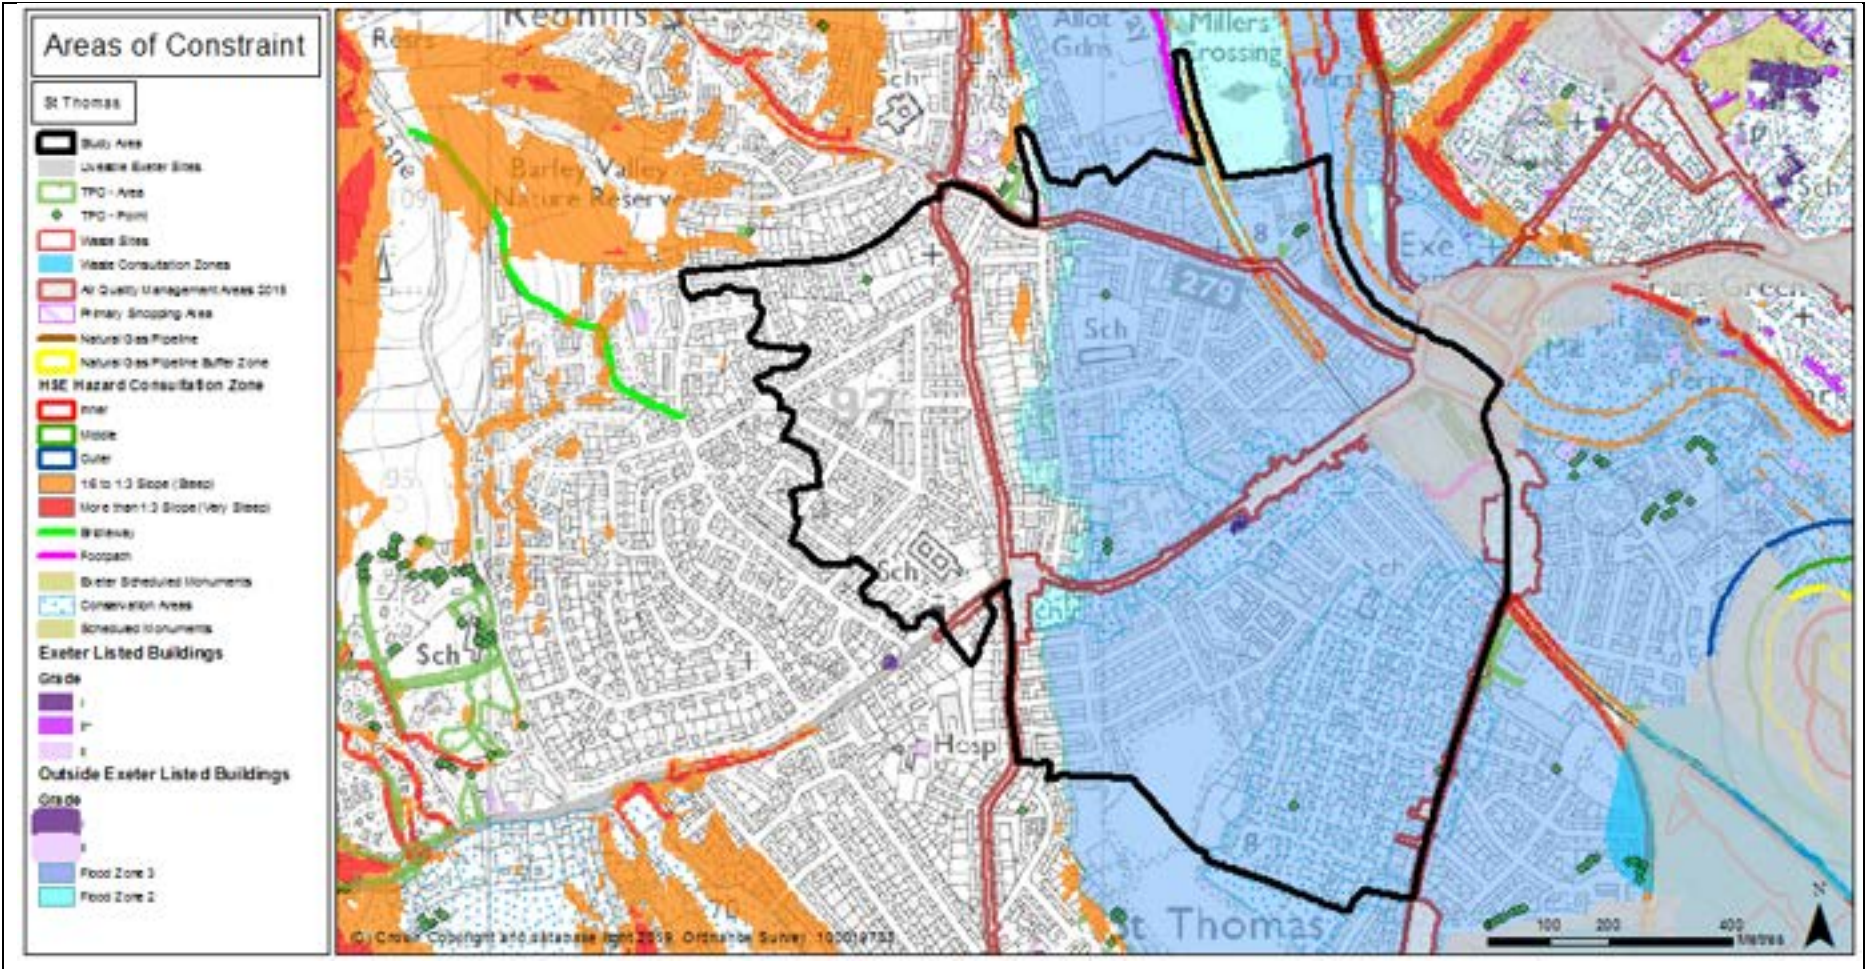

Notes: The MSOA contains Liveable Exeter site of Westgate, which is being assessed in a companion piece of evidence, and is therefore excluded from the UCS.

1D – Areas of institutional constraints

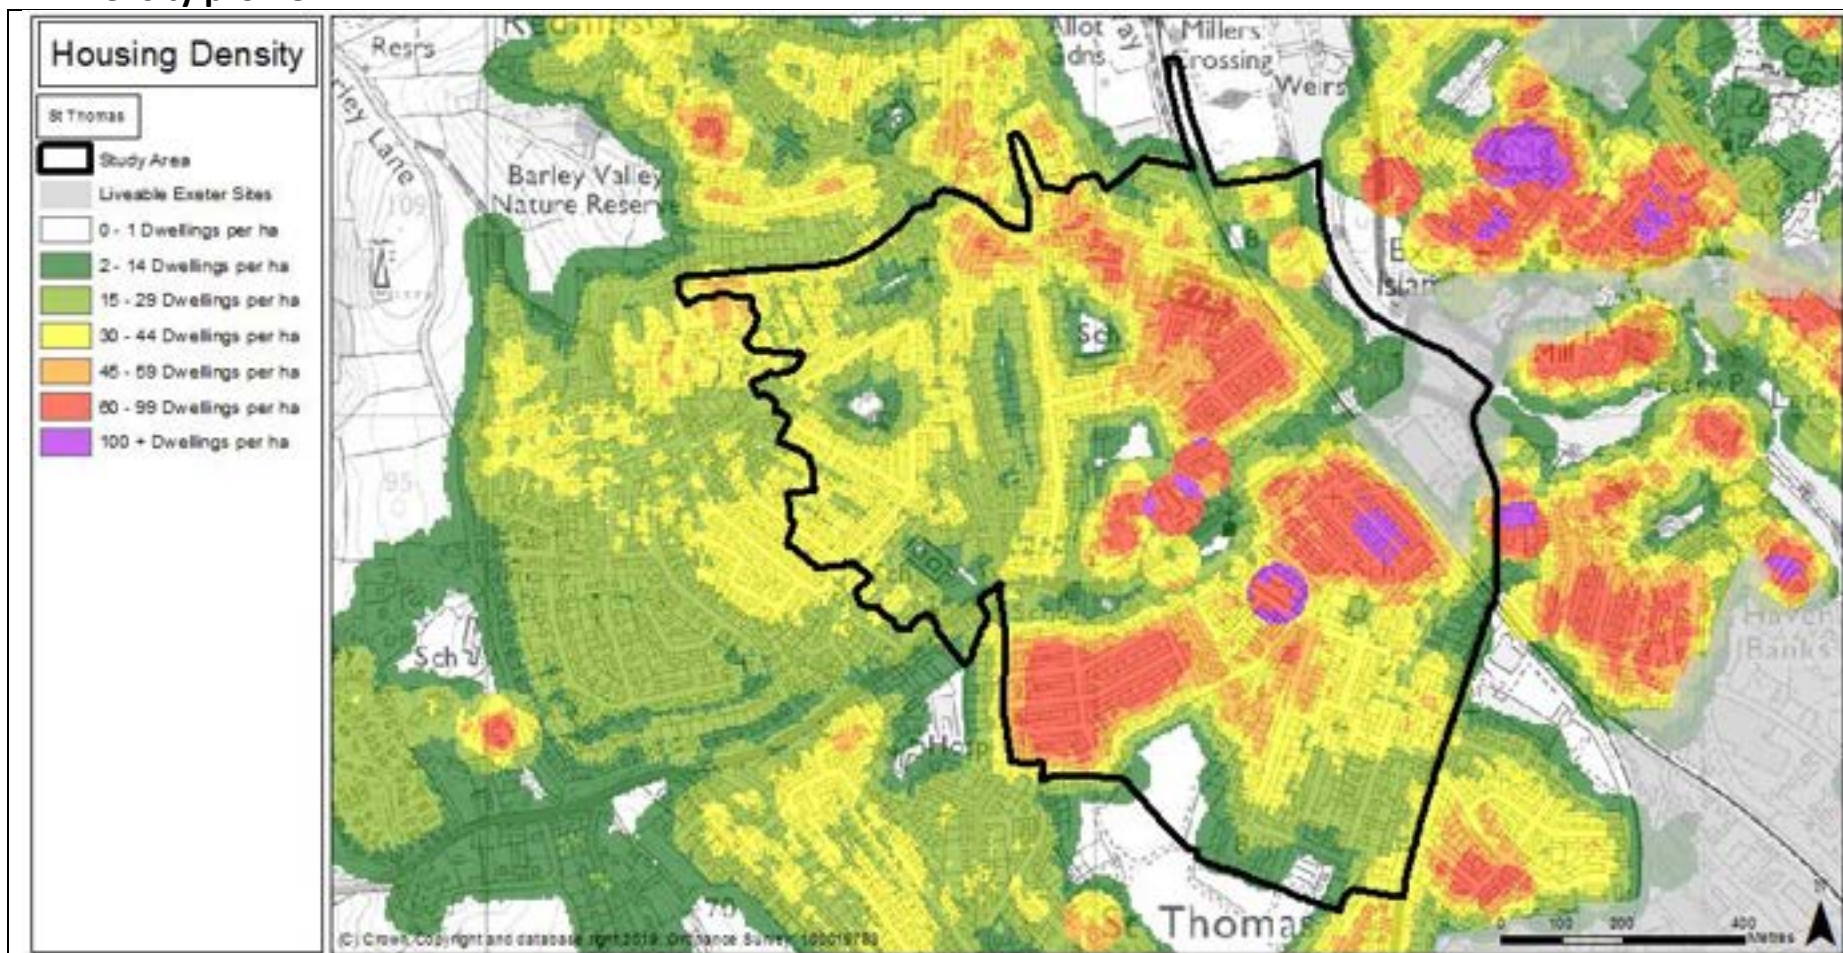

Notes: There are a number of different areas of community use within this site, including the Riverside Valley Park which is a significant constraint. In terms of the other areas that derive a specific public benefit from community use, the study area contains a good proportion of playing fields, allotments and parks, all of which need to be taken into consideration during site assessment.

1E – Areas of constraint

Notes: A number of constraints exist within St Thomas, including the Princes Square and Cowick Street conservation areas, grade I and II listed buildings, AQMA, and Flood Zone 3 which covers over half the study area.

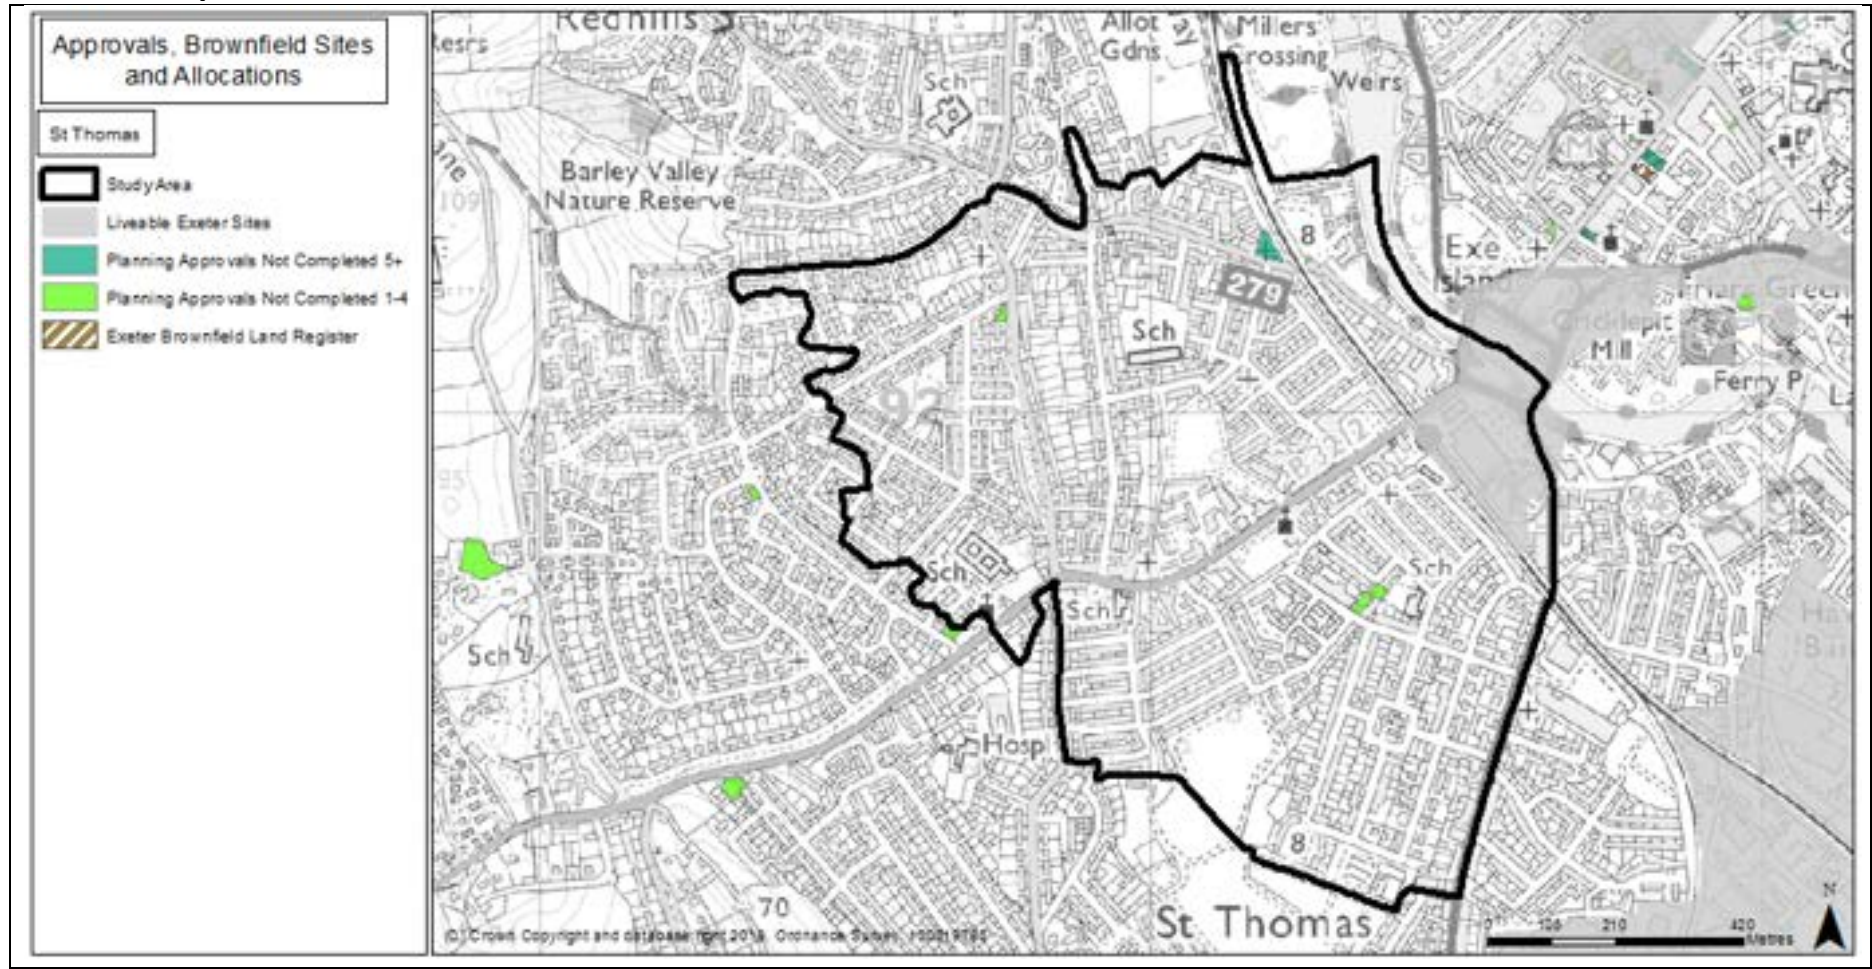

1F – Density profile

Notes: The St Thomas area is characterised by medium to high density terraced and semi-detached housing. The areas of highest density (60+ dwellings per hectare) are the 3 distinct areas of Victorian and inter-war terraces, which are unlikely to offer further capacity. The areas of lowest density (0 - 29 dwellings per hectare) are the post-war residential area, the Princes Square conservation area and land in other uses.

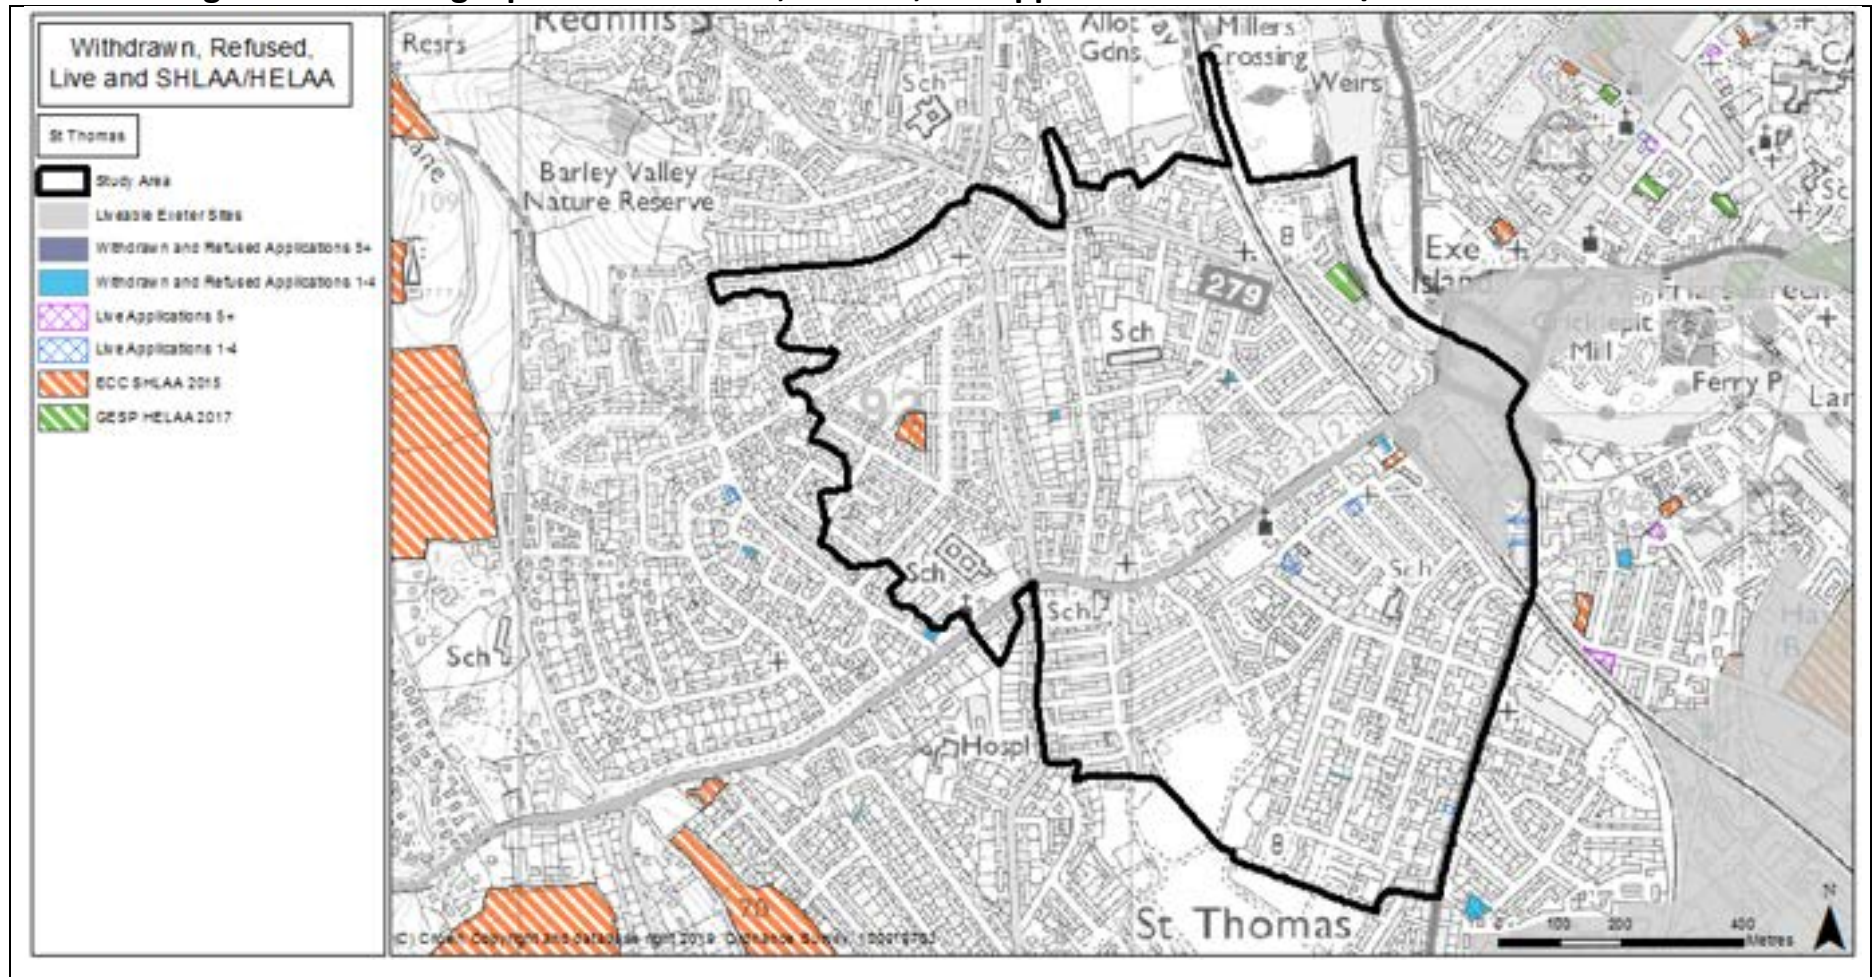

Stage 2 Sources of Supply

2A – Planning and monitoring inputs - planning approvals not completed, Brownfield Land Register, and sites allocated but not completed

1C – Areas of statutory exclusion

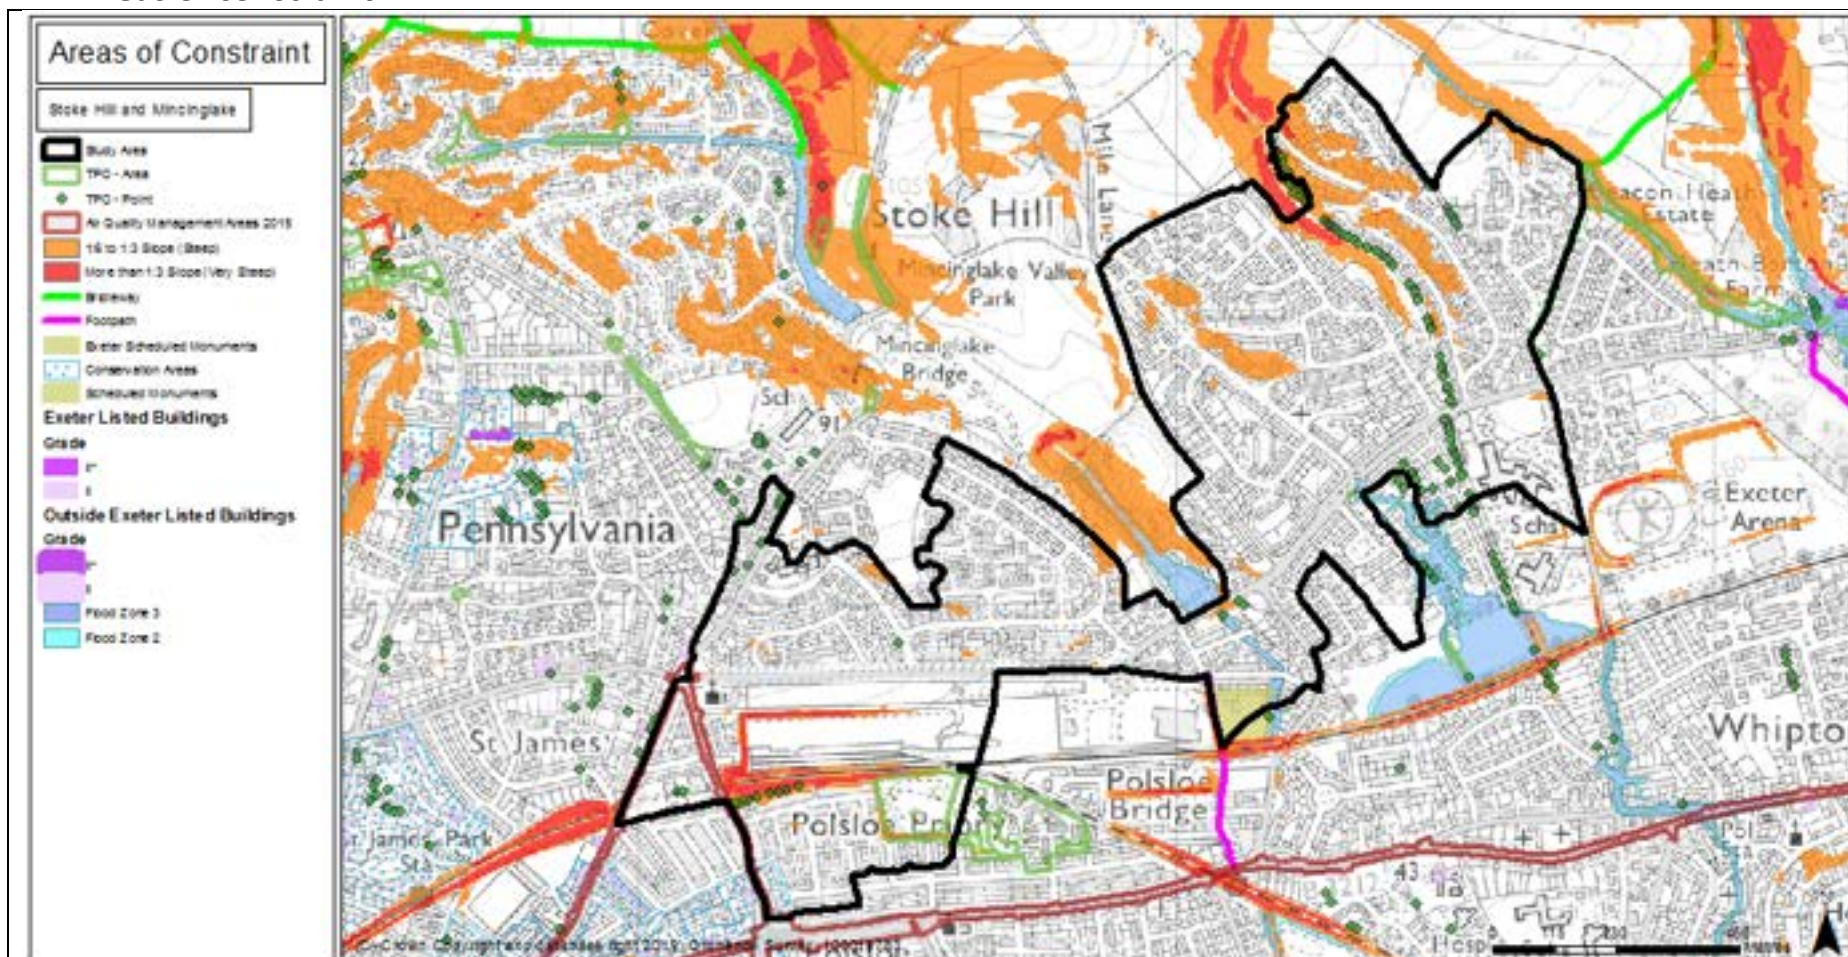

Notes: The study area does not contain any areas of statutory exclusion within it, nor close to the study area.

1D – Areas of institutional constraints

Notes: There are a number of different areas which provide public benefits including a public park, play parks and allotments, The Mincinglake Valley Park, which is part of the network of Exeter Valley parks, also borders the centre of the study area. All of these need to be taken into consideration during site assessment.

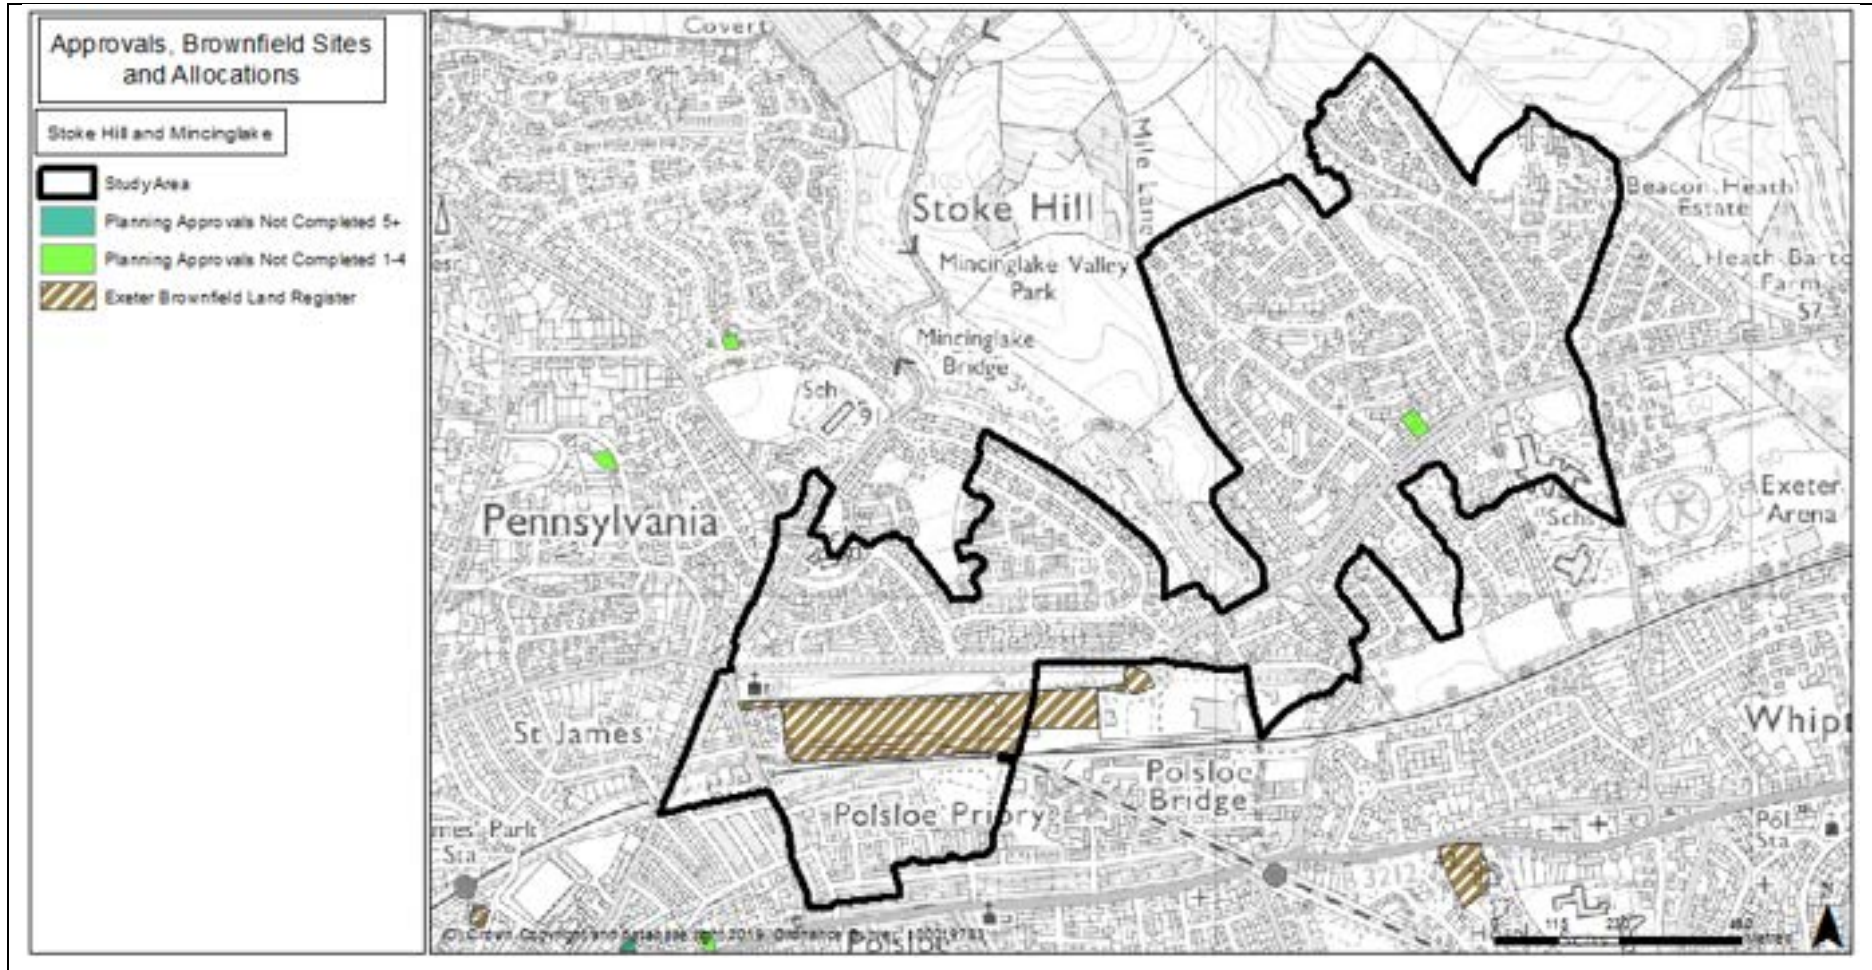

1E – Areas of constraint

Notes: While relatively few constraints exist within the study area, those present include a short section of an air quality management area, small areas of flood zone 3, a number of TPOs, St Katherine's Priory scheduled monument and areas of steep land. These constraints will be considered in the assessment work.

L. Topsham and Countess Wear

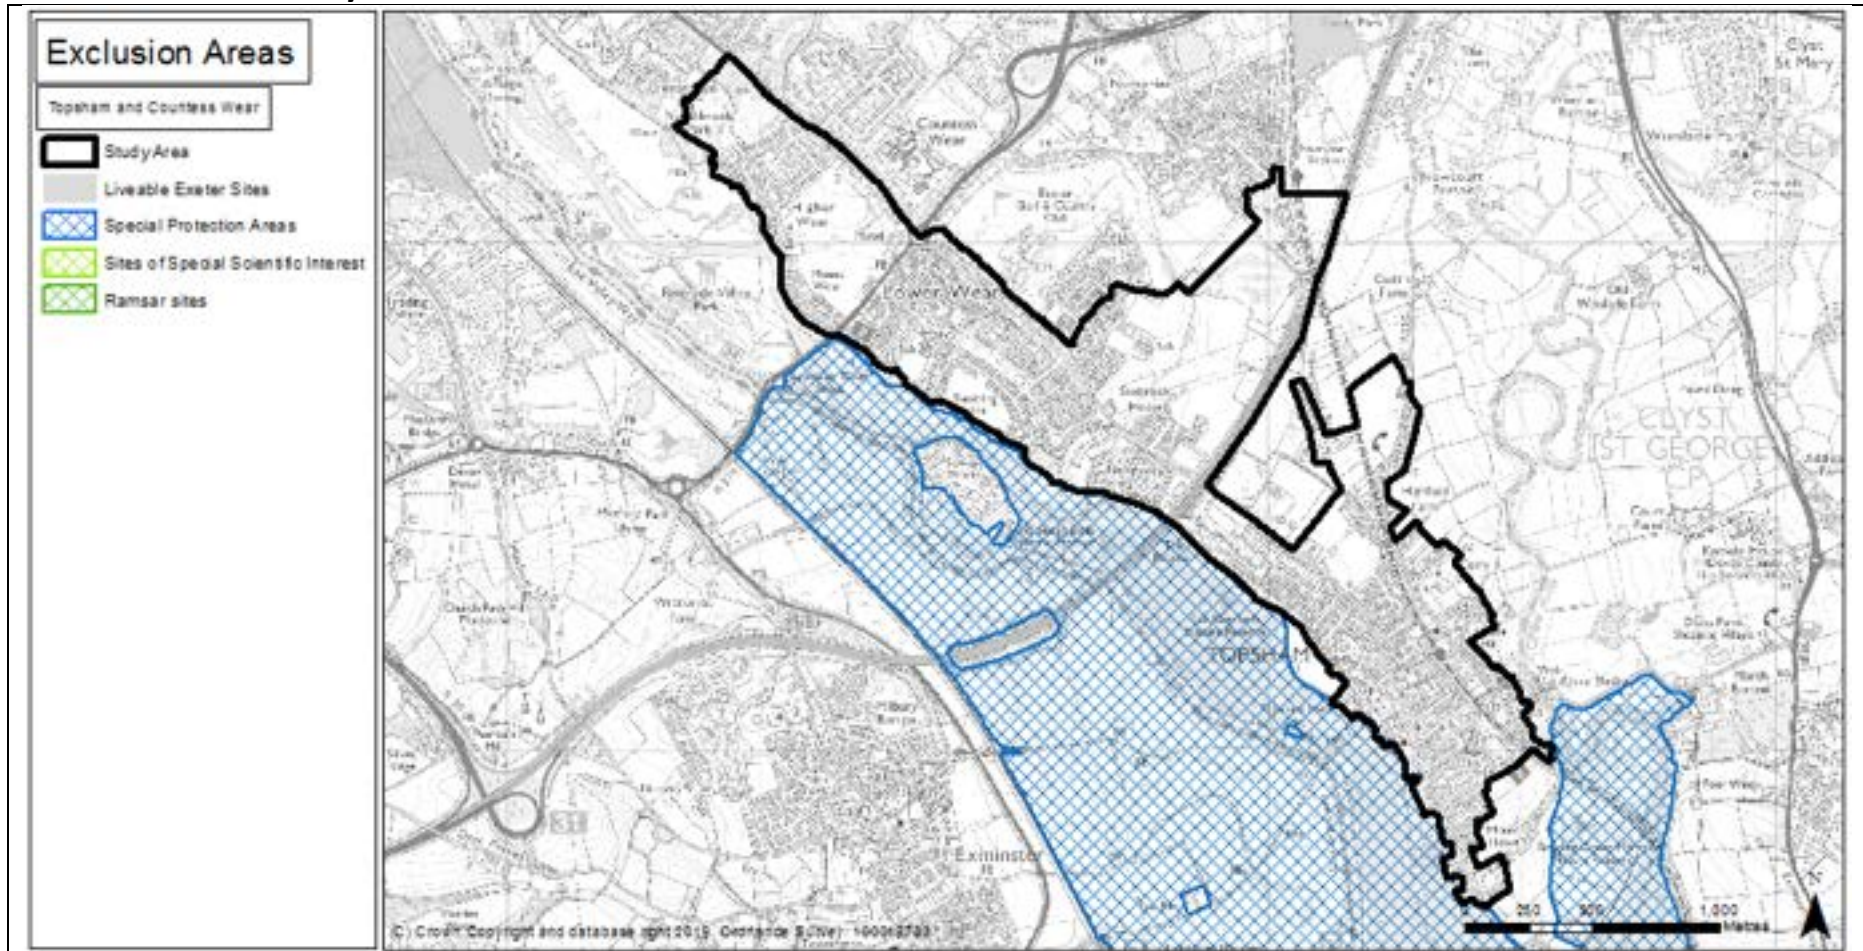

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

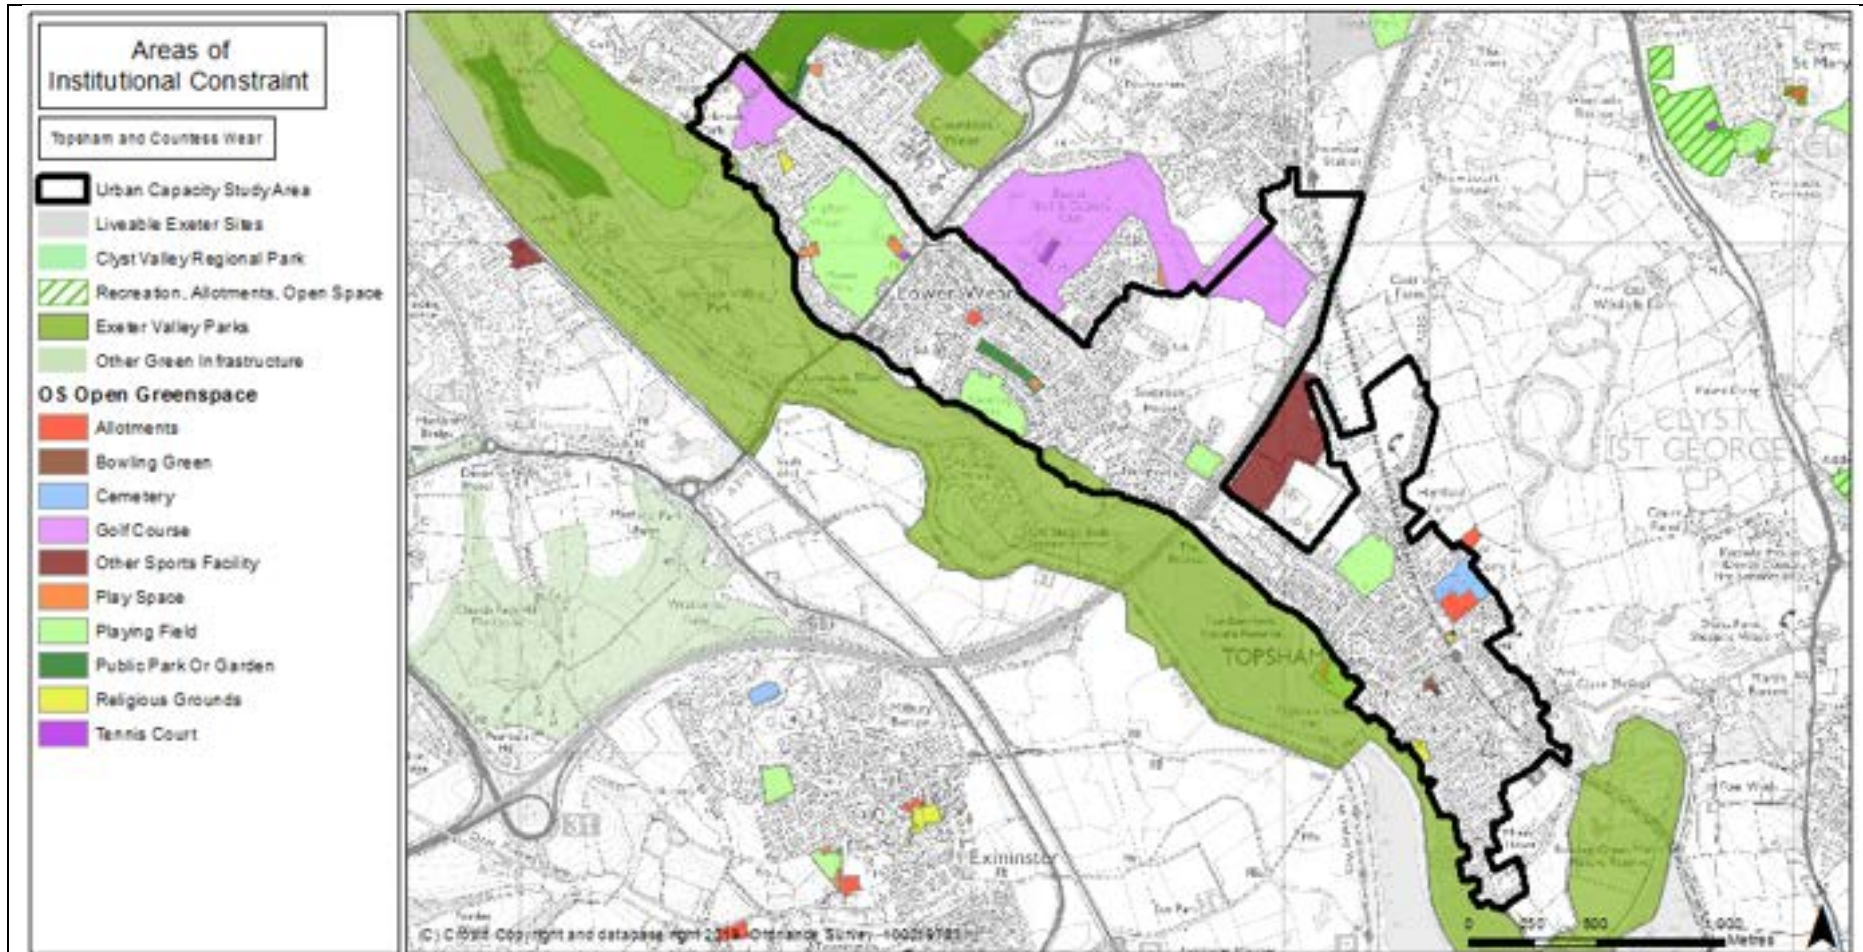

Notes: This study covers the area of Topsham and Countess Wear. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into Middle Super Output Area (MSOA) within the existing urban area. Topsham and Countess Wear has a population of about 7500.

1C – Areas of statutory exclusion

Notes: The Topsham and Countess Wear area is adjacent to the Exe Estuary SPA, which is an internationally significant wildlife designation. It is recommended that new dwellings are not built within 400m of the SPA.

1D – Areas of institutional constraints

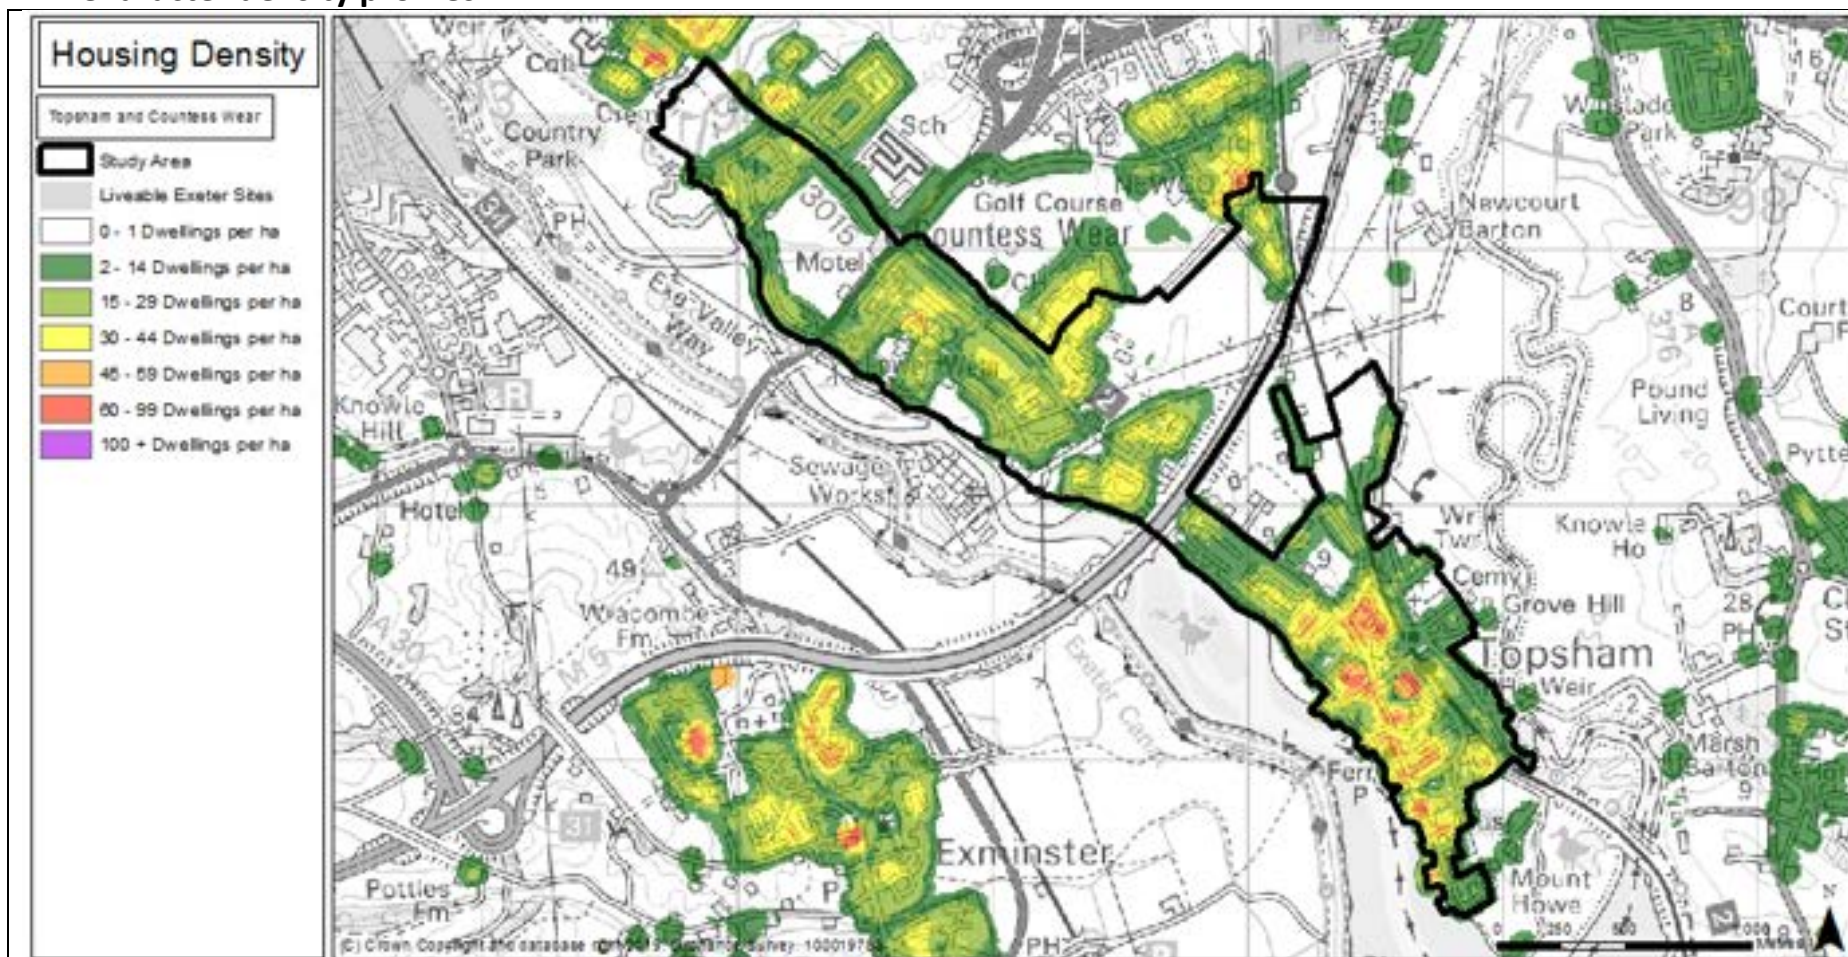

Notes: There are a number of different areas exist which provide public benefits, including playing fields, cemeteries, public parks, allotments and golf courses, all of which need to be taken into consideration during site assessment. The Riverside Valley park also runs along the border of the study area.

1E – Areas of constraint

Notes: A number of constraints exist within the Topsham & Countess Wear study area which may impact on the deliverability of new housing. In particular, Topsham Conservation Area, Grade II and II* listed buildings, air quality management area, flood zone 3, numerous TPOs and public rights of way, and a waste consultation zone.

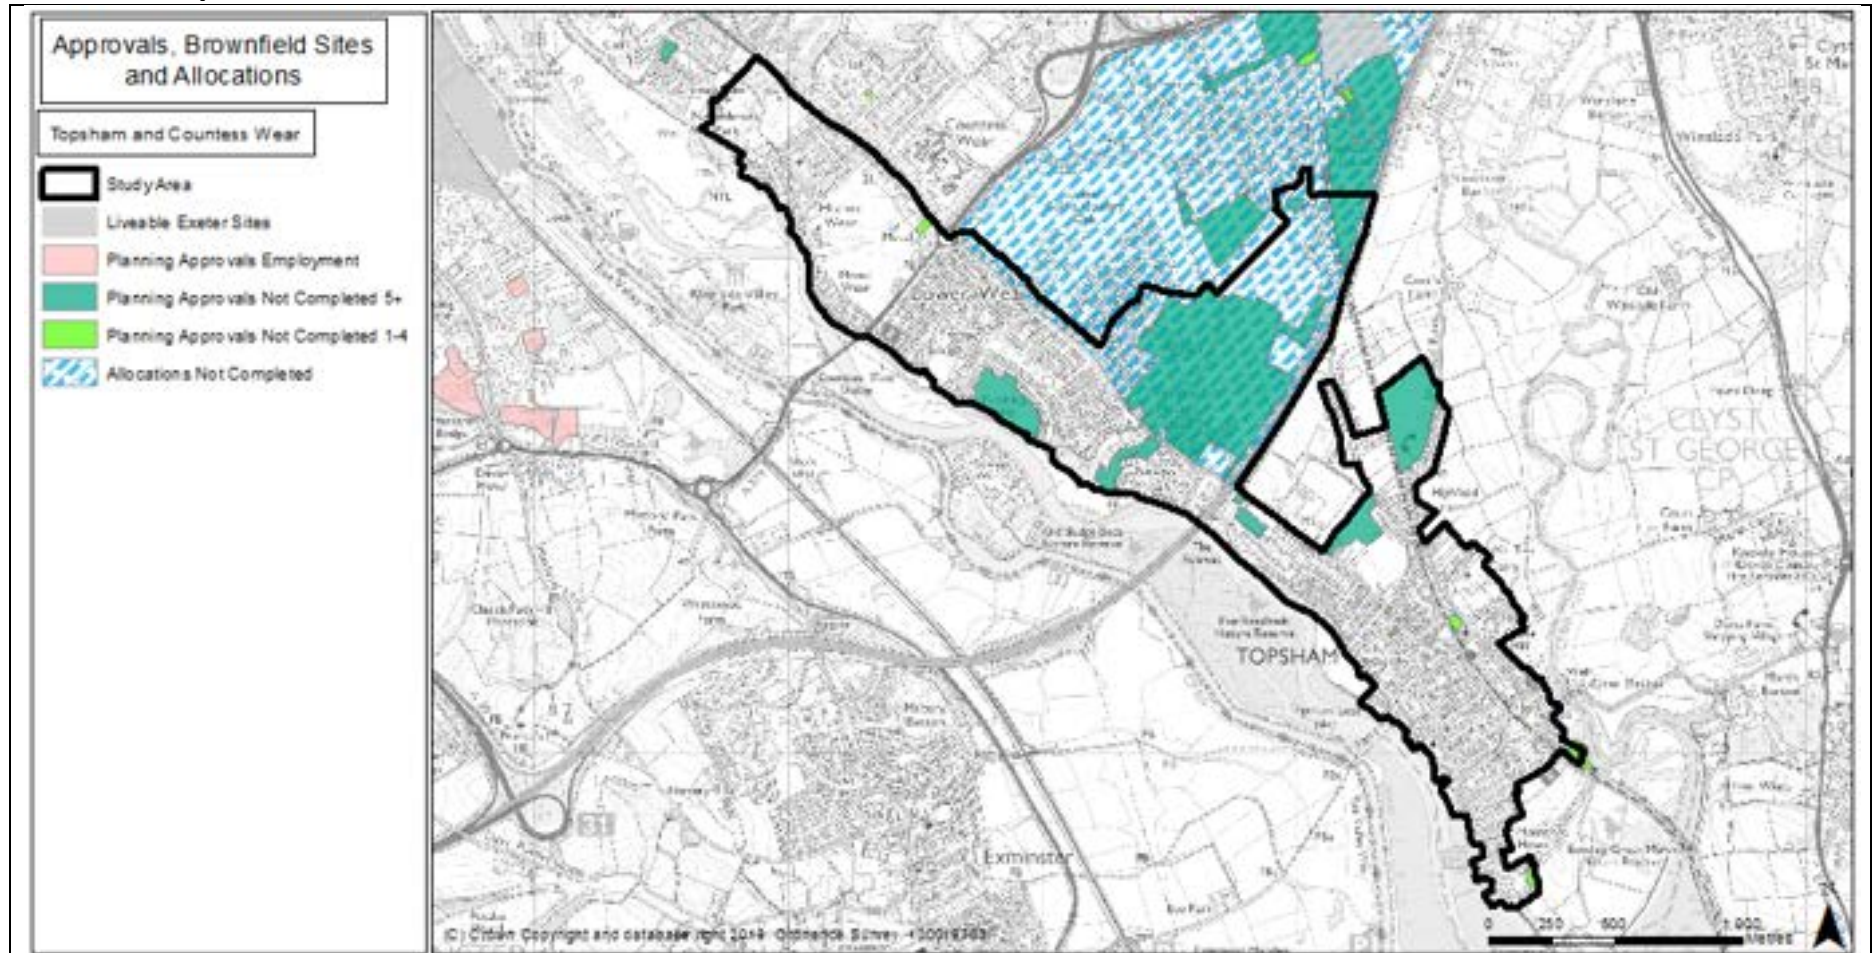

1F – Character density profiles

Notes: The Topsham and Countess Wear area is characterised by patchy low to medium density housing in the majority of area, with higher densities exceeding 45 dph in and around the historic centre of Topsham.

Notes: This assessment covers the University and Pennsylvania Middle Super Output Area which has an estimated population of 9,019.

1C – Areas of statutory exclusion

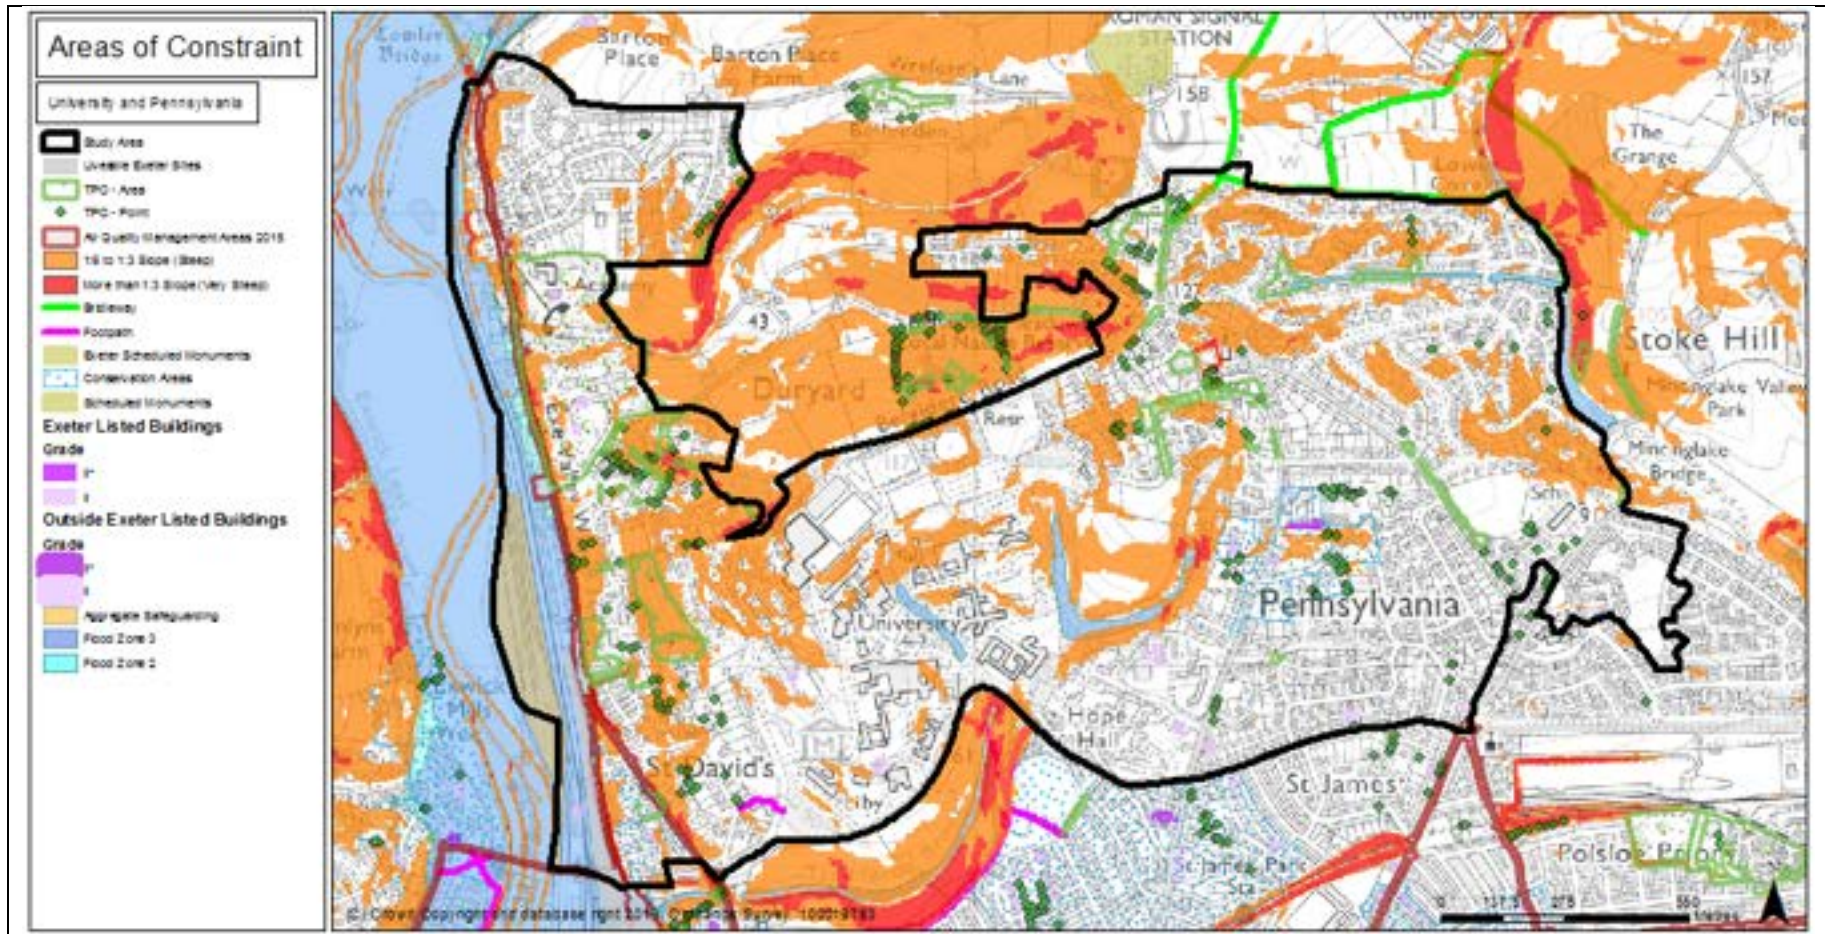

Notes: No areas of statutory exclusion within the study area. A Site of Special Scientific Interest and Ancient Woodland lies some distance to the north. Part of the Exeter St David's Station Liveable Exeter site is located within the study area.

1D – Areas of institutional constraints

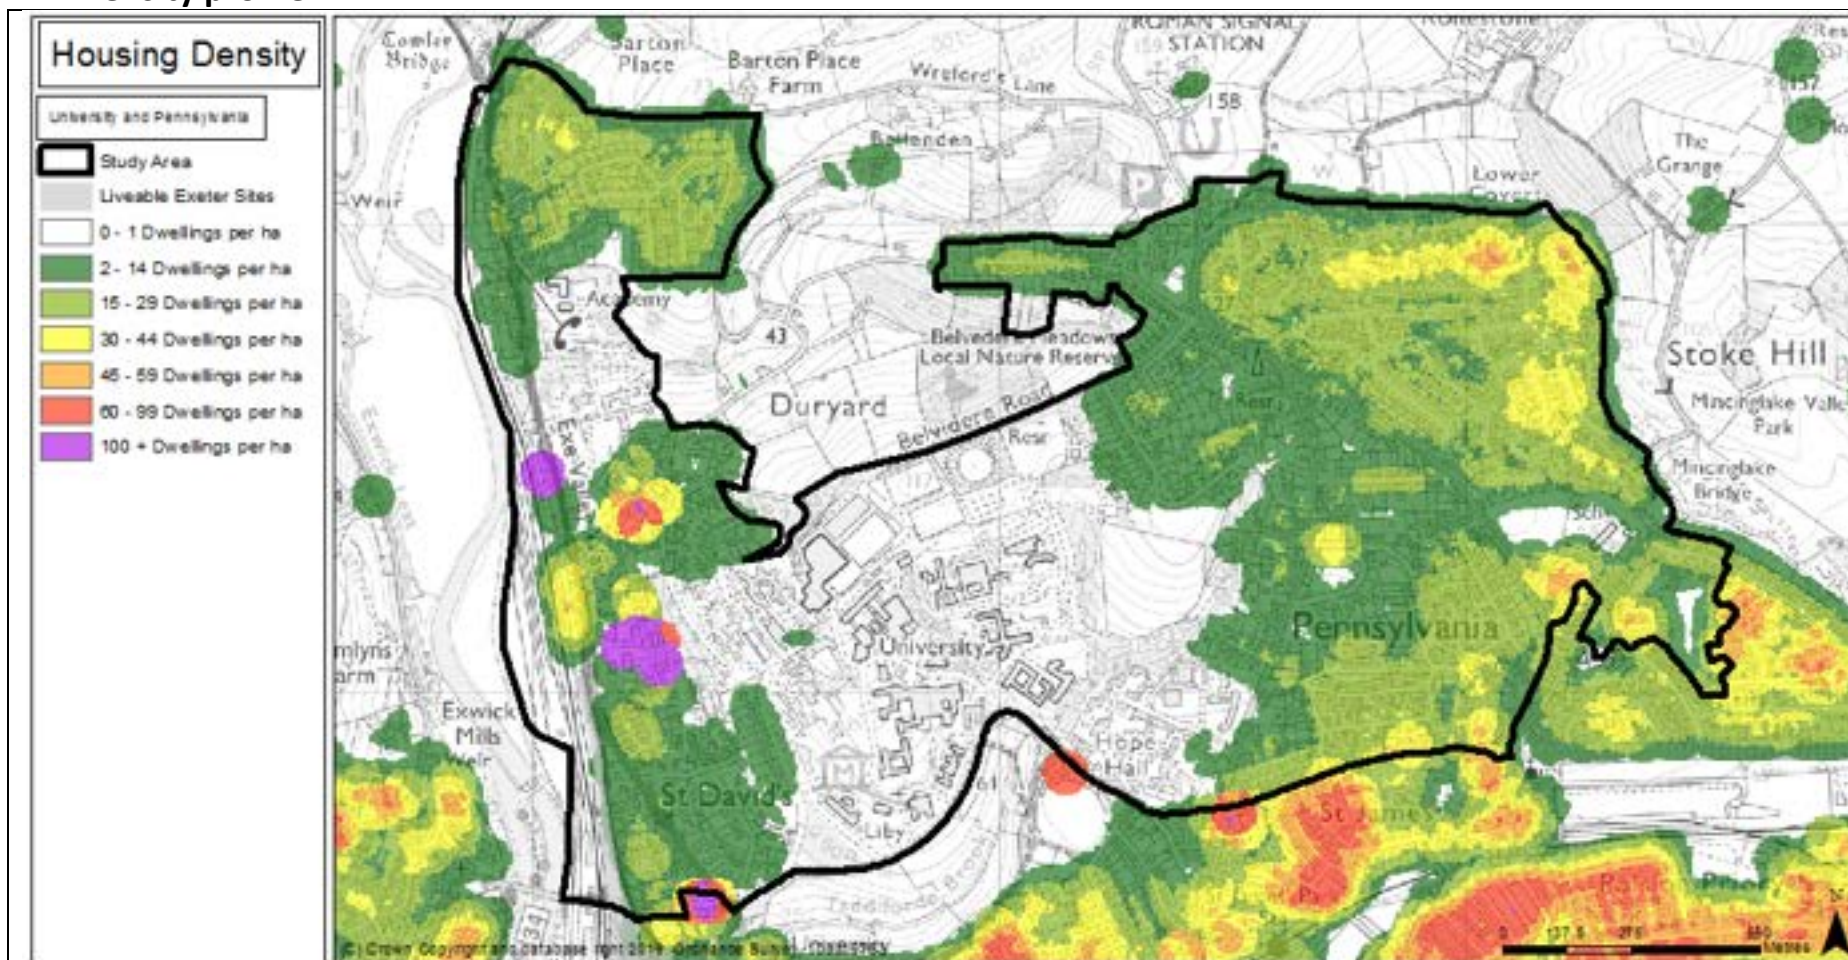

Notes: There are a number of different areas within the study area that derive a specific public benefit from community use. All of these will be taken into account during the site identification and assessment stages.

1E – Areas of constraint

Notes: There are a number of areas of constraint within the study area which may impact on the deliverability/desirability of new housing. The study area includes a small area of flood zone 3 along its western boundary which extends along the mainline railway. Cowley Bridge Road is covered by an Air Quality Management Area. There are a number of TPOs and TPO areas located throughout the study area, with the largest cluster located around Duryard Halls of Residence. Two Scheduled Monuments lie some distance to the north.

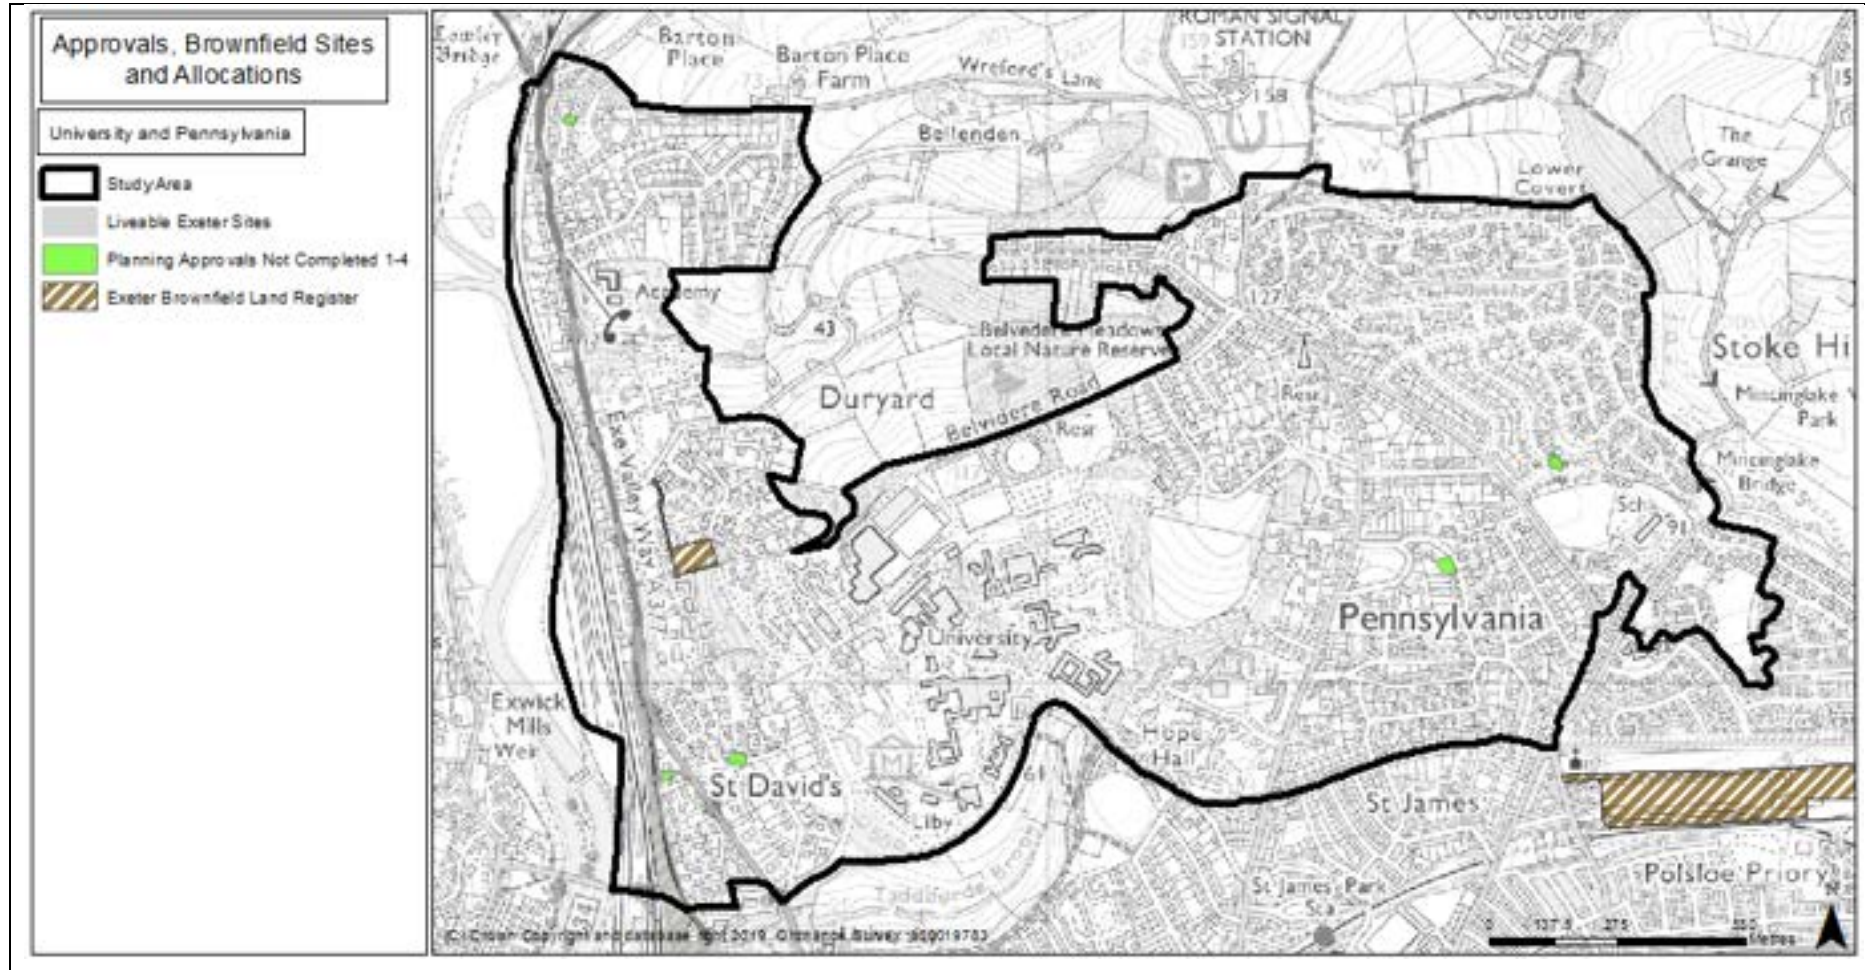

1F – Density profile

Notes: A range of densities can be found within the study area. The highest densities relate to student accommodation at Birks Grange Village and Homes for Students Exeter One. The remainder of the study area is comprised of low to medium densities of between 2 and 44 dwellings per ha.

Stage 2 Sources of Supply

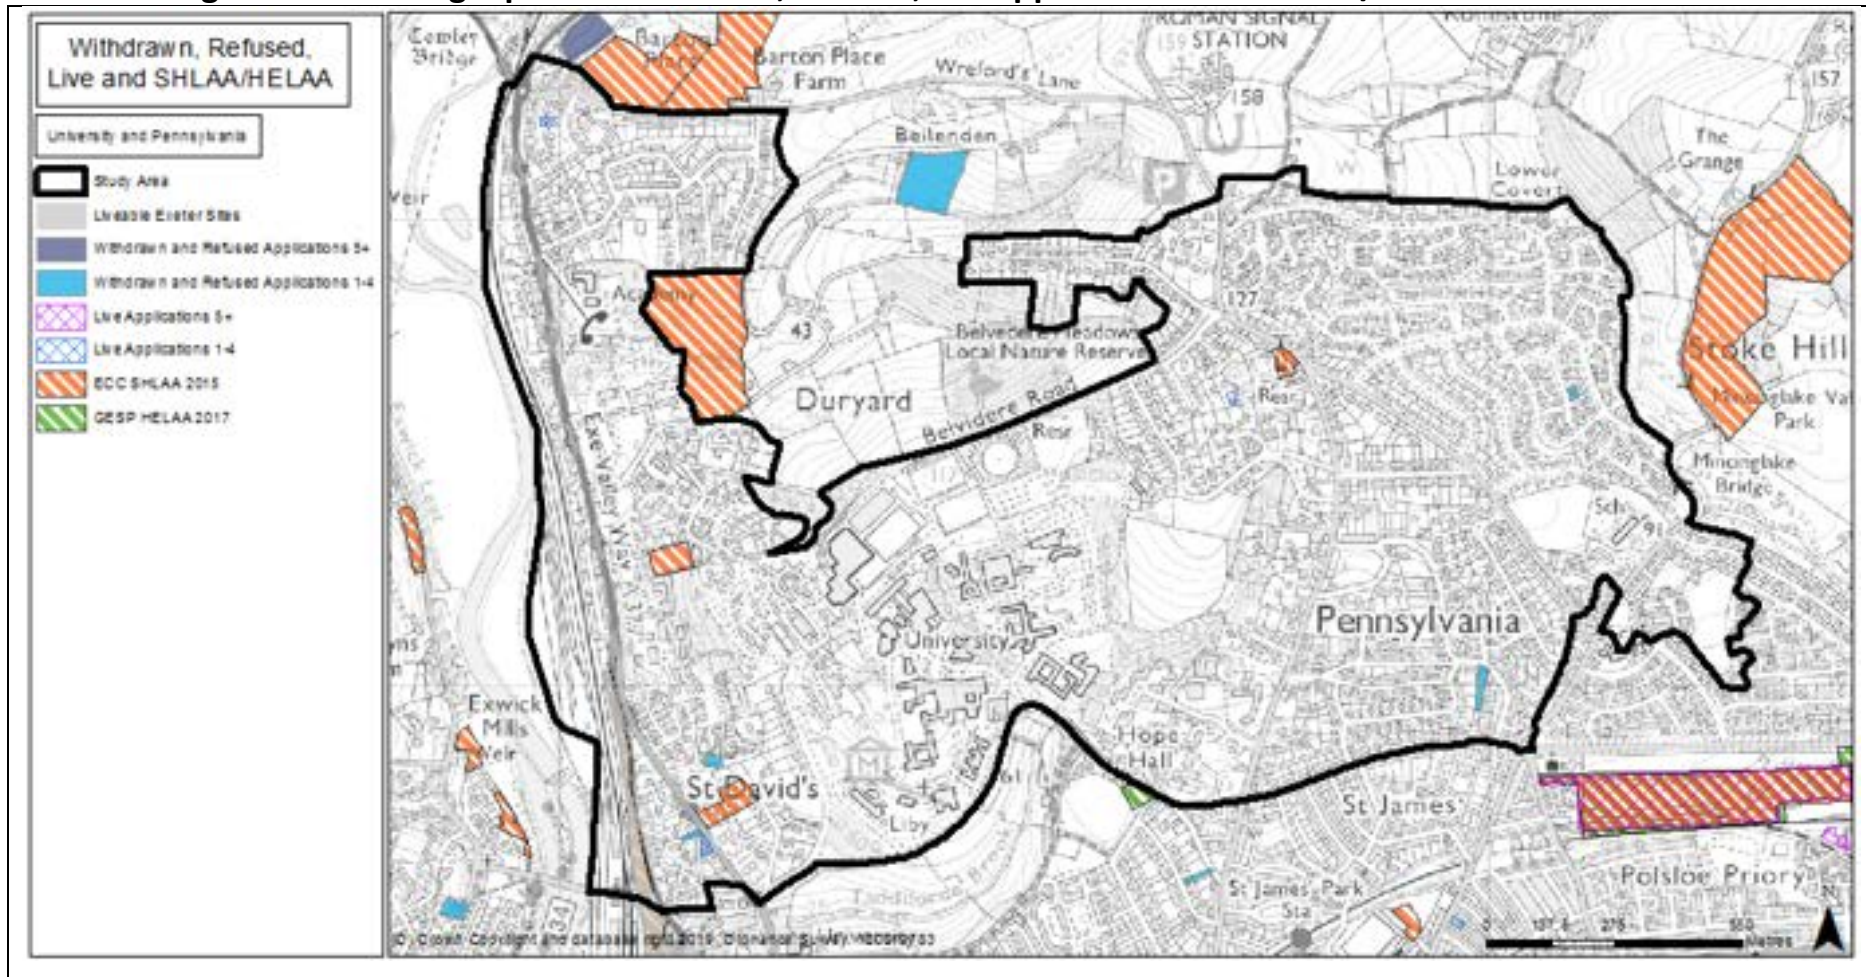

2A – Planning and monitoring inputs – planning approvals not completed, Brownfield Land Register and sites allocated but not completed

Notes: All of the sites below have been excluded from further consideration through the above study, given their existing planning status.

2C - Institutional assets and opportunities

Notes: No institutional assets and opportunities identified through consultation.

2D – Targeted national non-domestic ratings (NNDR) potential UCS sites

Notes: There are no targeted NNDR potential sites within the study area itself, although there are two adjoining. These have been excluded as they do not meet the minimum thresholds for inclusion.

2E – Vacant residential properties

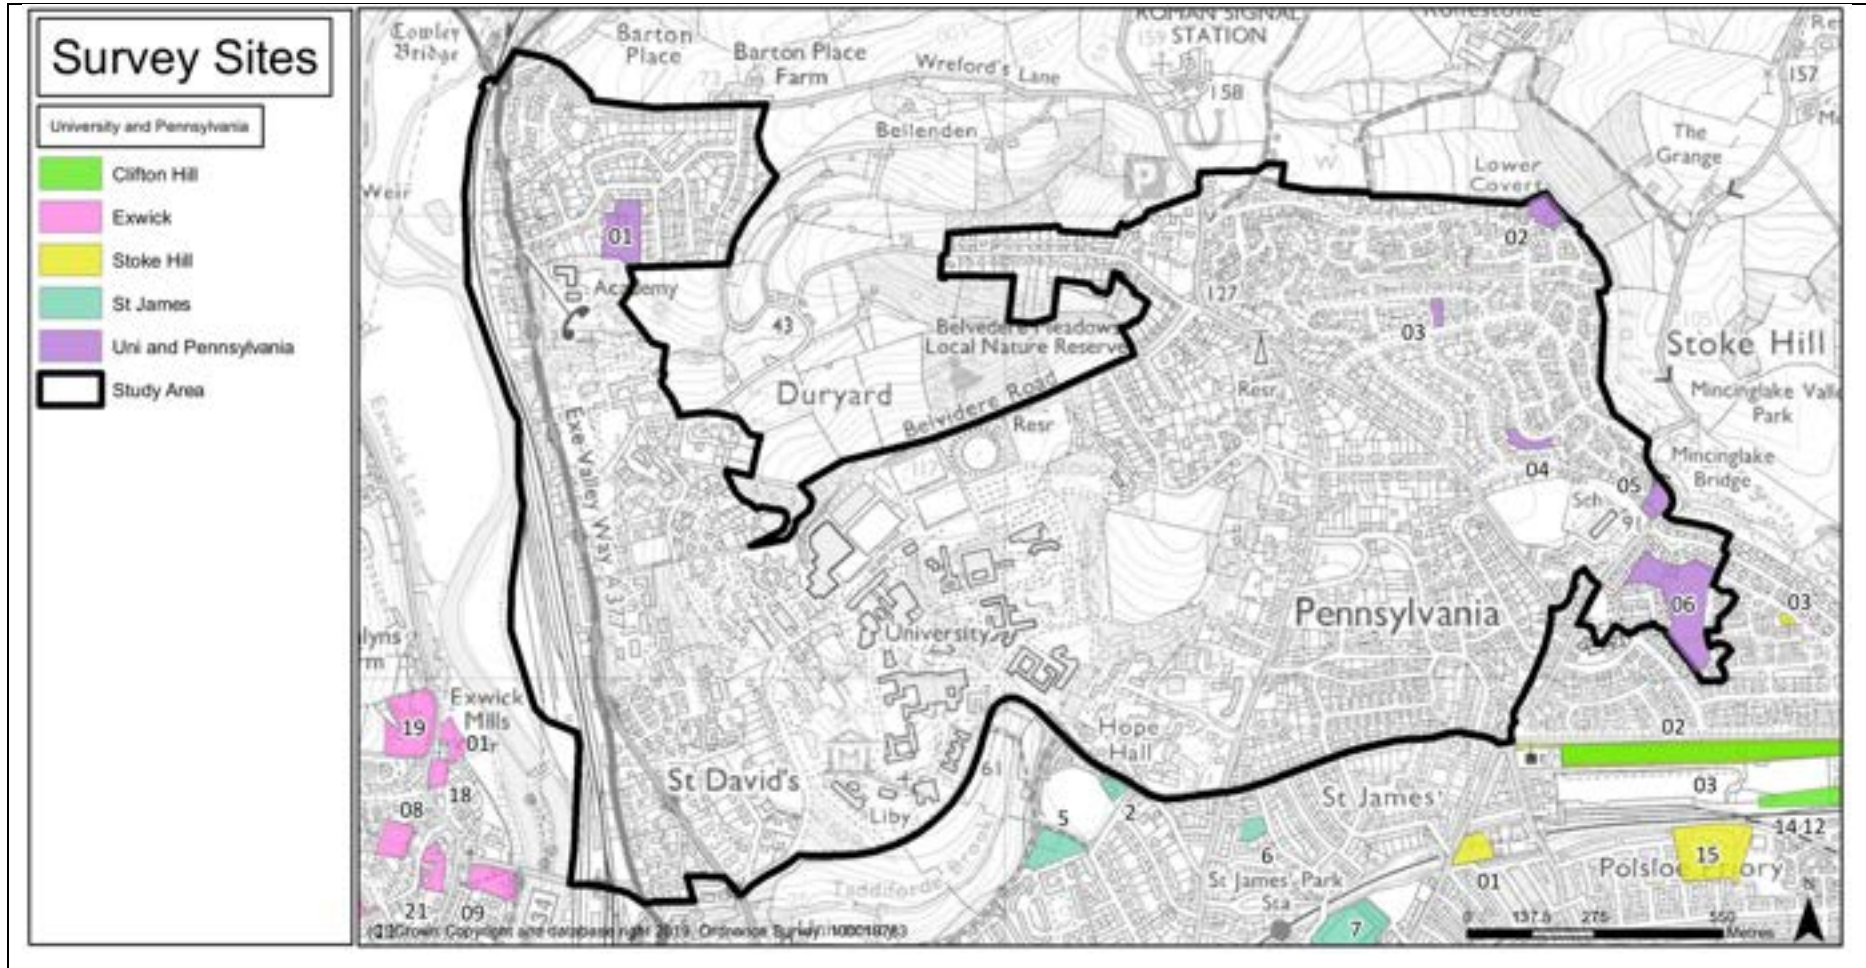

Notes: There is one long term empty home within the study area at 1 Rosebarn Avenue. This has not been carried forward as the site is unlikely to have sufficient capacity to deliver at least 5 dwellings.

2F – Additional Potential UCS Sites

Notes: No additional sites have been identified in an assessment of all other potential spaces in the study area.

N. Whipton

Stage 1 Methodology and Preparation

1B – Study area settlement boundary

Notes: This assessment covers the Middle Super Output Area (MSOA) area of Whipton, Exeter. Population: 7600 (2017). 158 hectares.

1C – Areas of statutory exclusion

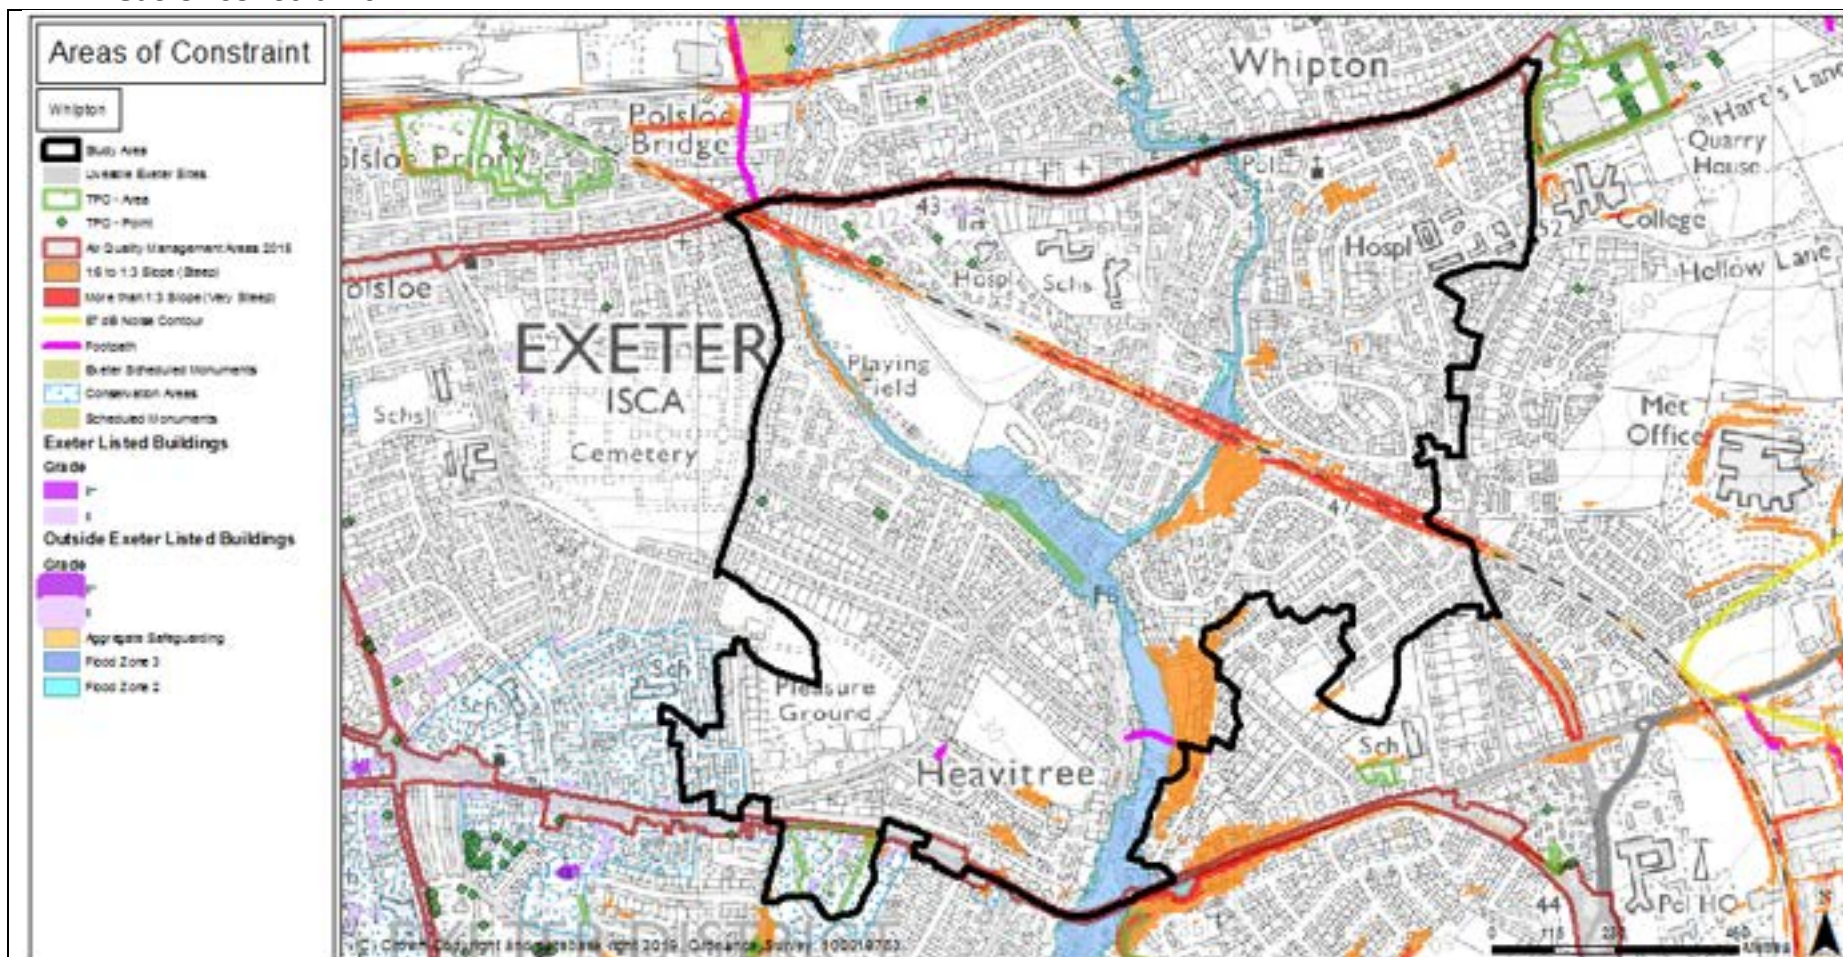

Notes: There are no areas of statutory exclusion within the study area.

1D – Areas of institutional constraints

Notes: There are various areas of institutional constraint within the study area that derive a specific public benefit from community use, including allotments, playing fields, religious buildings. All of these will be taken into account during the site assessment and identification stages.

1E – Areas of constraint

Notes: There are a number of areas of constraint within the study area. There is an area of flood zone 2 and 3 running throughout the centre of the study area as well as TPOs, grade II listed buildings, public rights of way, and part of Heavitree conservation area. The Heavitree Corridor Air Quality Management Area borders the south of the site.

1F – Defining density profiles

Notes: A range of densities can be found within the study area. The highest densities can be found immediately east of Whipton Barton Junior School (Rennes House and Chester Long Court flats) reaching 100+ dwellings per ha as well as Hamlin Gardens which reaches 60-99 dwellings per ha in parts. The remainder of the study area is comprised of low – medium densities (15 – 44 dwellings per ha) with occasional areas reaching 45 -59 dwellings per ha.

2C - Institutional assets and opportunities

<p>Notes:The GESP authorities consulted a wide range of institutional landowners. NHS Property Services have outlined the development potential of Whipton Community Hospital, Hospital Lane, EX1 3RB. There is an opportunity to make more effective use of the site, subject to health commissioning requirements. The NHSPS are the freeholders of the site and estimate that should 50% of the site come forward for redevelopment, the site has a capacity to deliver 45 units at 50 dwellings per hectare within a 6-10 year timeframe.</p>

Whipton Barton House, Vaughan Road, EX1 3JN	UCS_EC_WH_02	92	<p>Site has development potential but mitigation measures and further assessment will be required.</p> <ul style="list-style-type: none"> - Archaeology / Conservation – Site developable, though some potential for buried remains as the NE part of the site was occupied by Whipton Barton, a reasonably substantial house with farm/outbuildings dating from at least the 17C, and probably earlier. It may have originated as a medieval manor. At the SW corner of the site lay other buildings, called Stones Cottages. The remainder of the site to the east was orchards and open fields, up until the late 1930s and probably later, though that is not to discount the general potential for some earlier remains (Roman and prehistoric) being present. Although the construction of the present Whipton Barton House in the 1960s is likely to have removed and disturbed at least some of the remains of the earlier house/manor house complex, complete removal of the latter across the whole site is unusual, and therefore there is still the potential for buried remains to survive in places. Archaeological work should be undertaken as a condition of a planning permission, when the current buildings are empty/demolished and services are cut off, and before construction work commences. - Flood and Water – Site developable subject to appropriate surface water drainage strategy required so as not to increase runoff/lower to greenfield runoff rate. Stage 1 Methodology and Preparation

1B – Study area settlement boundary

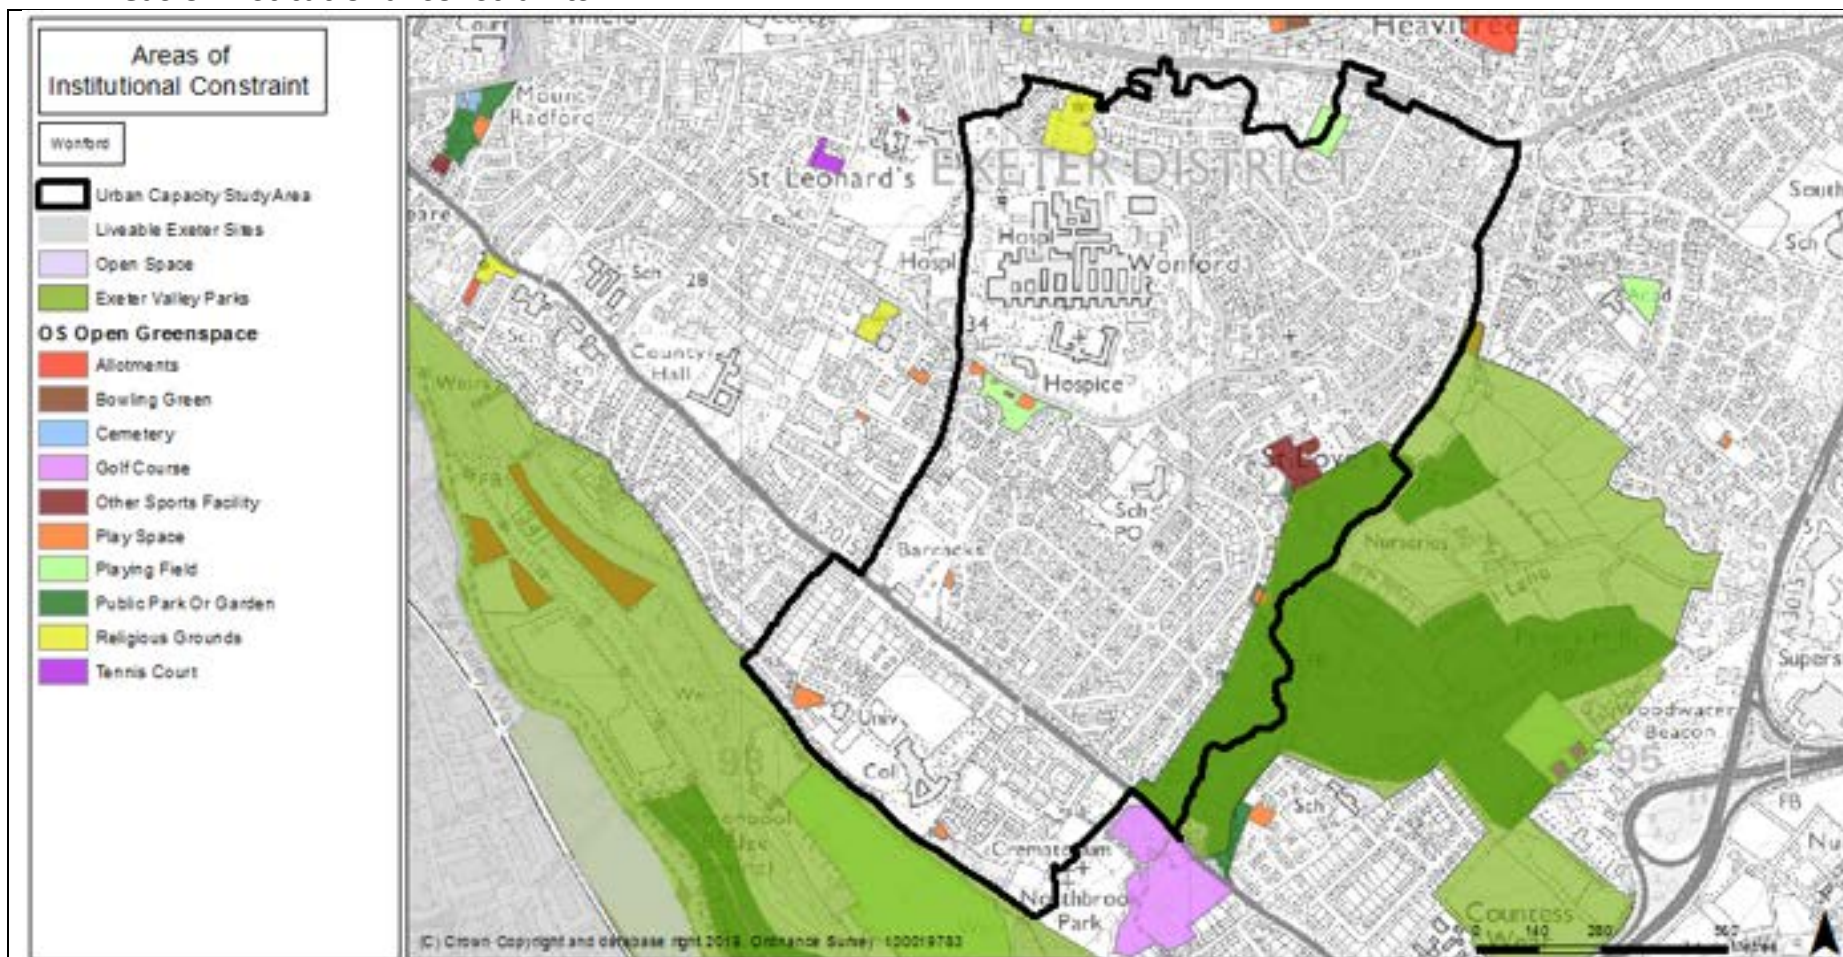

Notes: This study covers the Middle Super Output Area (MSOA) of Wonford. As all of Exeter is within the built-up area boundary, the Exeter study area is divided into MSOAs within the built up boundary, which excludes Valley Parks and previously undeveloped land predominantly defined by the landscape setting/valley park area boundaries set out in the Local Plan 1995-2011. Pop: 8200 (2017). 177ha.

1C – Areas of statutory exclusion

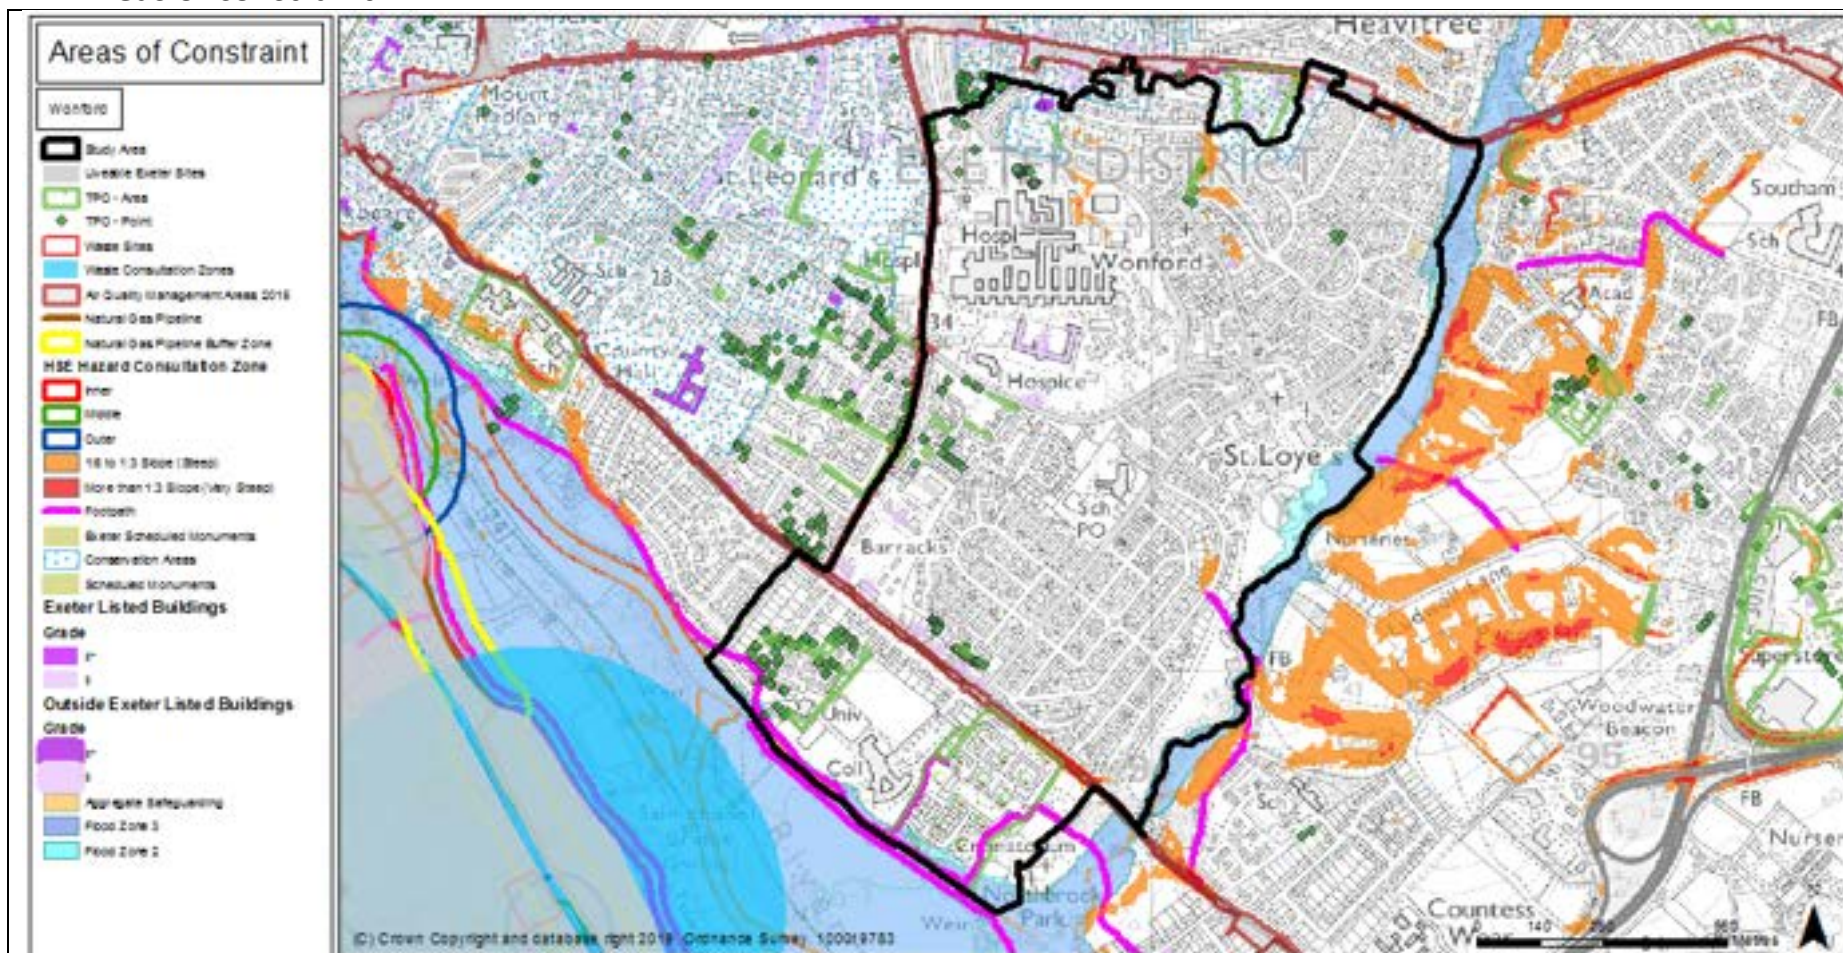

Notes: None

1D – Areas of institutional constraints

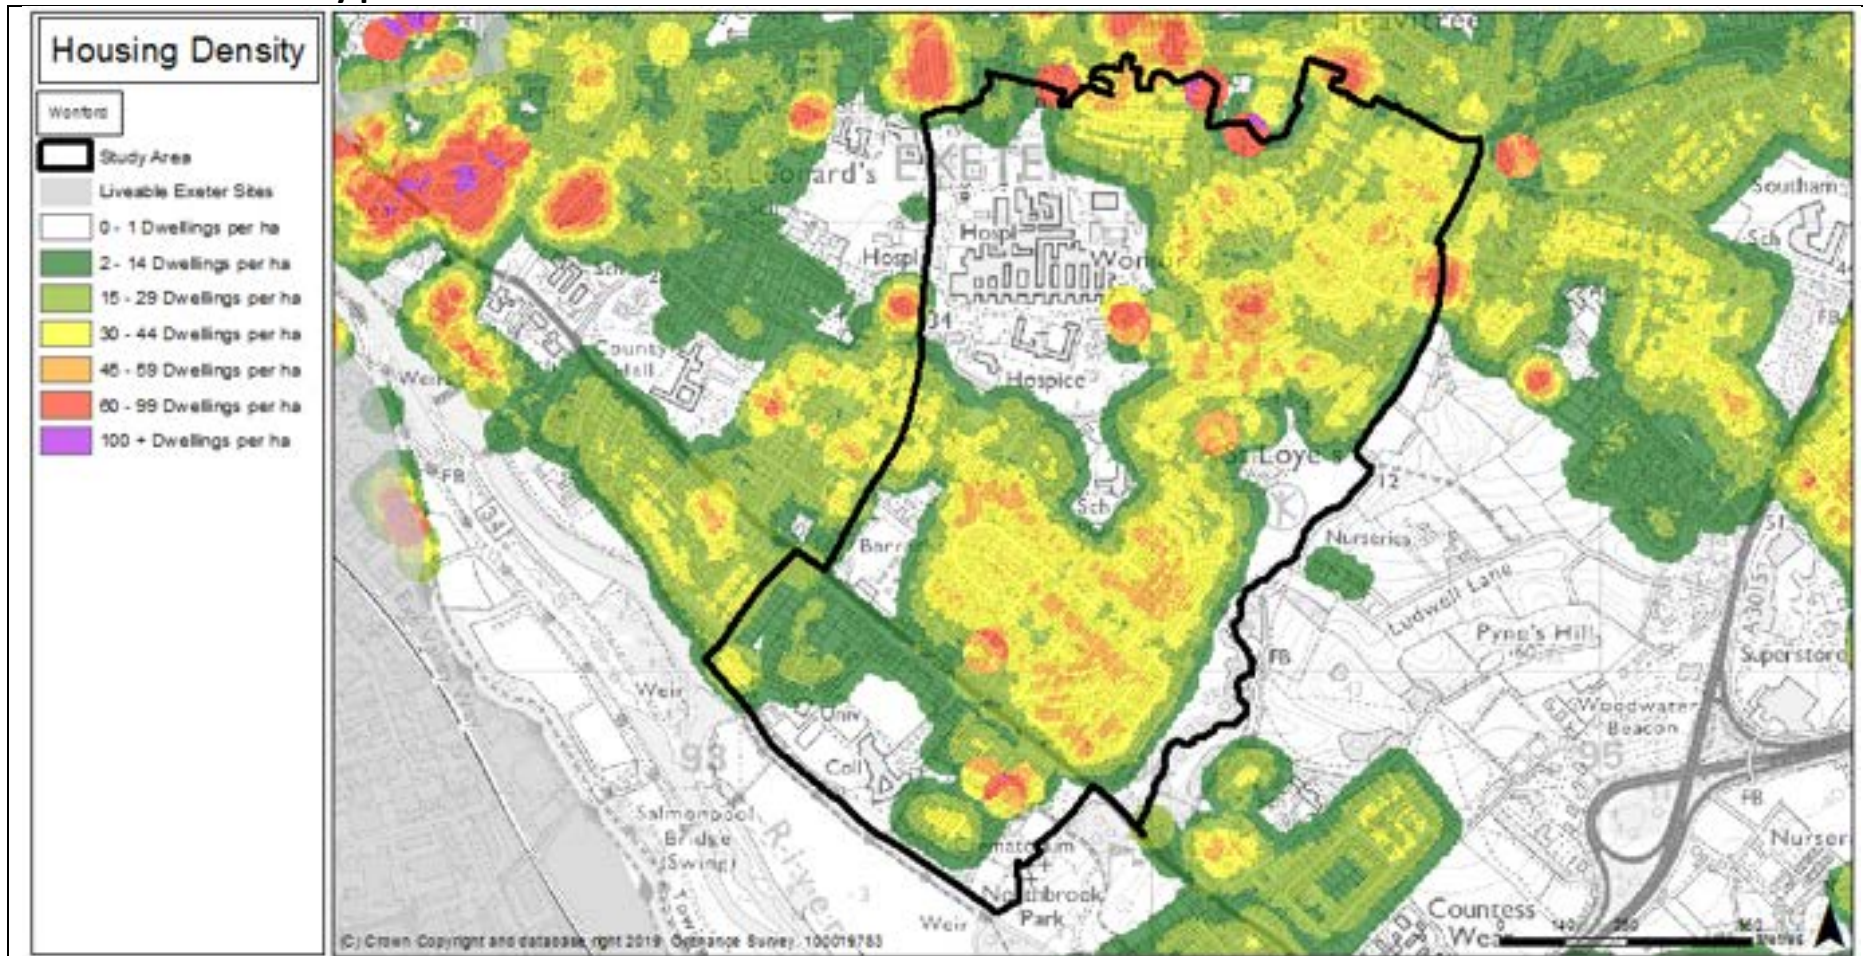

Notes: There are a number of different areas that derive a specific public benefit from community use, all of these will need to be taken into consideration during site identification and assessment.

1E – Areas of constraint

Notes: A number of areas of constraint exist within the Wonford study area which may impact upon the deliverability of new housing. Areas of constraint include: part of Heavitree conservation area, a number of tree preservation orders, grade II and II* listed buildings, St Loyes Chapel and cross scheduled monument, air quality management areas, and public rights of way. There is also a section of the study area that is within Flood Zone 2 and 3.

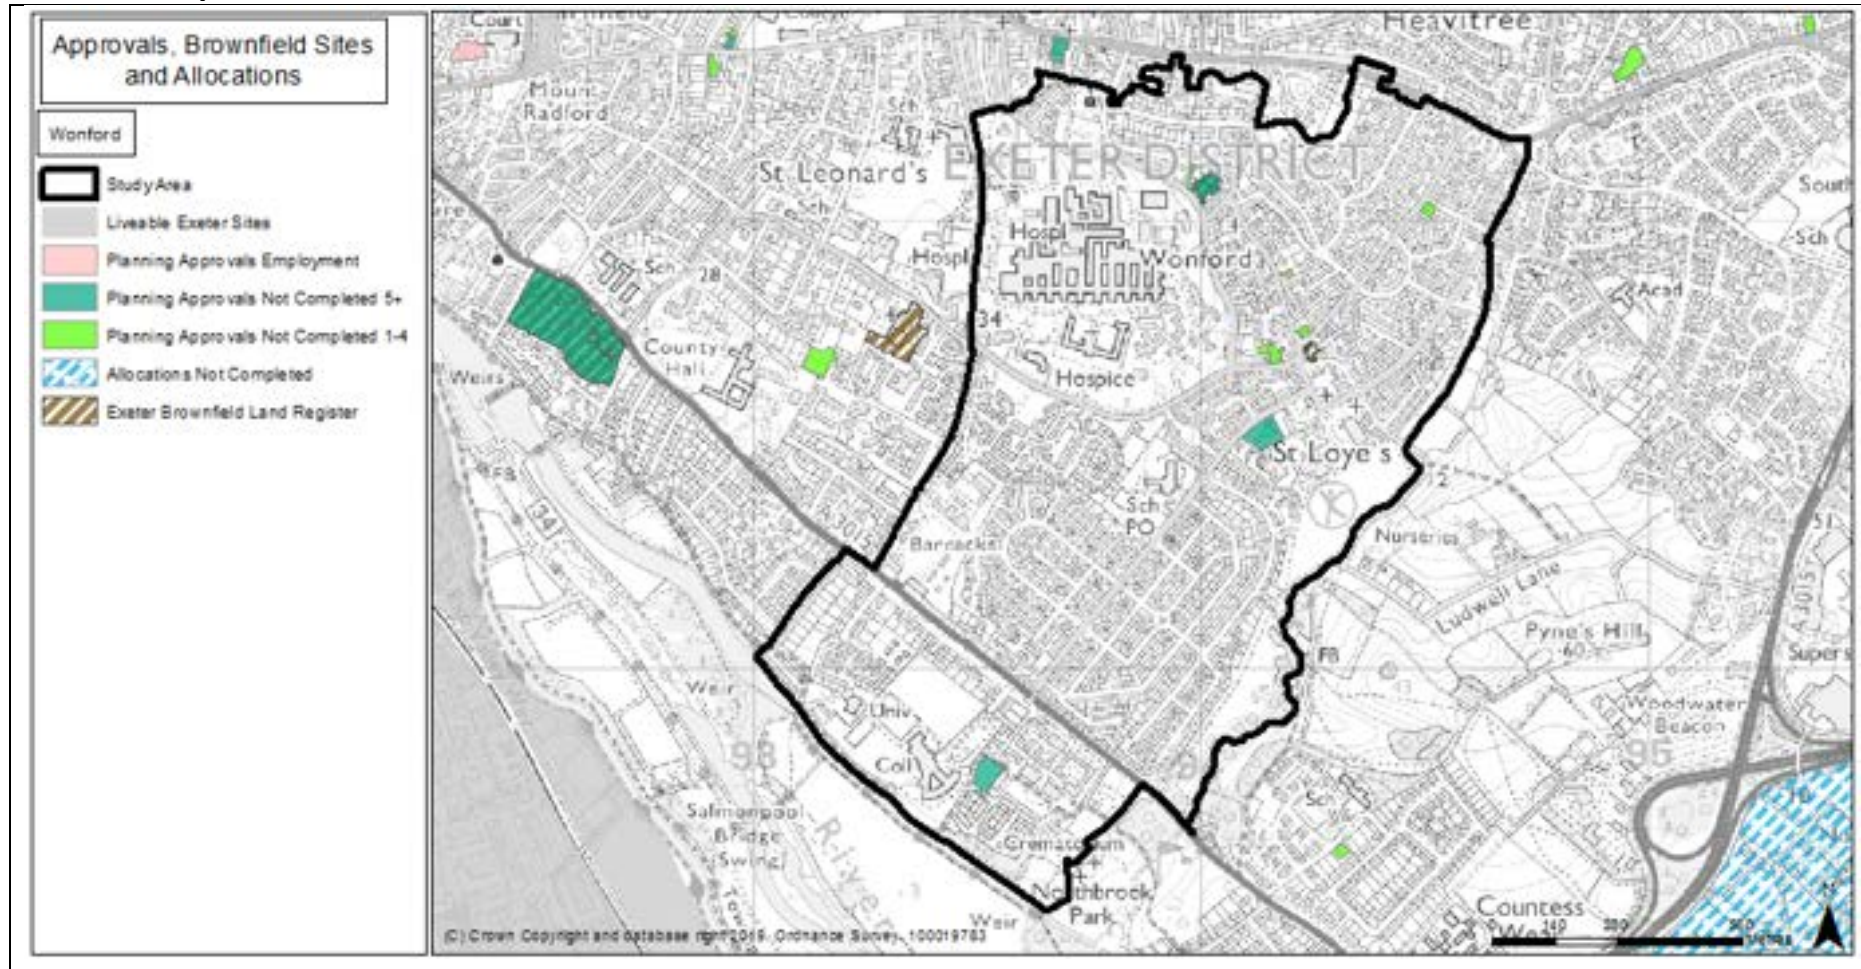

1F – Character density profiles

Notes: The areas of highest density (60+ dwellings per hectare) are pockets clustered around Meyer Court and Mowbray Court on Butts Road, Rifford Road flats, Milbrook retirement village, and hospital accommodation. The areas of lowest density (0-1 dwellings per hectare) include the RD&E Wonford hospital campus, Wyvern Barracks, Wynstream School, Wonford Sports Centre, Lidl, Isca Academy, the Exeter Dental Education Facility and the Crematorium. The majority of the Wonford residential area is a density of 30-44 dwellings per hectare, with pockets of 45-59 dwellings per hectare, and lower density (2-14 dwellings per hectare) in the south towards the River Exe.

3A – (iii) All sites carried through to 3B

Notes: The following identified sites have been carried through to the next stage as offering some potential for capacity.		
Site Address	Reference	Approximate potential net dwellings
91-97 Wonford Street, EX2 5DA	UCS_EC_WO_01	9
Wonford Sports Centre, Surgery, Magnolia Avenue, EX2 6NF (Strategic Brownfield Sites Study)	UCS_EC_WO_03	N/A as rejected during consultation

3C – Site review (i) Sites rejected after specialist officer consideration and consultation

Site Address/Description	Reference	Reasons for rejection
Woniford Sports Centre, Surgery, Magnolia Avenue, EX2 6NF (Strategic Brownfield Sites Study)	UCS_EC_WO_03	Intention to retain sports facility. Location of residential development uncertain. Site includes occupied dwellings therefore insufficient evidence to conclude site suitable to take forward.

3C – Site review (ii) Remaining potential UCS sites

Site Address	Reference	Approximate potential net dwellings	Expert Consultee Notes
91-97 Wonford Street, EX2 5DA	UCS_EC_WO_01	9	<p>Site has development potential but mitigation measures and further assessment will be required.</p> <ul style="list-style-type: none"> - Archaeology / Conservation – Potential archaeological remains. Programme of archaeological site work required to identify and record any remains would be required. - Flood and Water – The adjacent road and area is at significant risk of flooding from surface water and historically flooded in October 2014. Site developable subject to appropriate surface water drainage strategy required so as not to increase runoff/lower to greenfield runoff rate. DCC SuDS policy to be followed - Highways – site developable. Low car, but proximity to existing mini roundabout/Dryden Road junction a concern. Pedestrian crossing improvements required. - Minerals and Waste – Not located within a MSA or MCA or WCZ. - PROW – No PROW on site. - Environmental Health – Site developable, with assessment and mitigation as required (contaminated land). This location is close to public transport links and so any car parking provided should be minimal. Use of ULEVs should be encouraged (for example by a low emissions strategy for the development). - ECC Housing – N/A - ECC Estates – N/A - Arboriculturalist – site developable
