### NOTE

Following the Federal mandate for water efficiency outlined in the Environmental Protection Act of 1992, Faucets can be rated for water consumption based on two categories: flow rate and water consumption. With the "Water Consumption" standard, a faucet must not use more than 0.25 gallon of water per cycle. The TOTO® faucet with a 10 second cycle uses 0.17 gallon of water, or 0.5 gallon per minute. This is a 32% below the base line of 0.25 gallon per cycle. Furthermore, an innovative design feature incorporated into all TOTO electronic faucets is an "ON-DEMAND" mode. This means that the faucet will only deliver water as needed and will not run the entire duration of its rated cycle. This guarantees additional water savings. TOTO uses water consumption because it is the most accurate method of measuring water use. This method of measurement can be incorporated into water usage calculations for various efficiency programs. For more information, please consult [www.totousa.com](http://www.totousa.com)

\*Water pressures over 80 psi are not recommended for most plumbing fixtures.
