SOIL PIPE COUPLING TORQUE WRENCH

This durable "T-Handle" type torque tool with a contoured comfort-fit handle features a removable socket and a unique locking collar, which allows the tool to be used as an untorqued snug-up or back-off, as well as a conventional torque tool. With the locking collar retracted, the tool torques to the right (tightening), while ratcheting to the left. When proper torque value has been achieved, the mechanism slips internally and over-tightening is impossible.

WHEELER-REX HYDRAULIC PIPE CUTTERS

Wheeler-Rex Hydraulic Cutters are the solution to cutting larger diameter Cast Iron, Tile and Concrete Pipe. Like the hand operated “snap” cutters, hydraulic cutters are not rotated around pipe. Their remotely operated hydraulic pumps provide the required power. A 2”-3” minimum clearance is all that is needed to wrap cutter chain around pipe. They come complete with pump, hose and case.

THE PIPEMASTER

General Information:

Unit consists of a cutting head with internal gears which operate the drive wheels and blade shaft. Cutting blades (except for No. 4616) must be cooled with water during cutting and are fully enclosed for safety. The cutter is held onto the pipe by a wide roller chain which is tensioned with a threaded take-up mechanism. A chart is included which tells the operator how much chain is required for various sizes of pipe. PipeMaster comes standard with cutting head, roller chain, wedges and water supply tank in a wood case. Blades are chosen based on pipe material and are not included with the basic machine. Maximum wall thickness for cutting is 1". The unit has a hydraulic motor which requires an external hydraulic power source. See our *Model 6500 Power Pak and 701185 Bypass Valve on the next page.*

HOLE CUTTER SYSTEM

The Wheeler-Rex Hole Cutter System is designed to easily cut holes from 4"–12" (100–300mm) into clay tile, ductile and cast iron, plastic and reinforced concrete pipes. The unit is available with a variety of power sources including 2-cycle gasoline engine, pneumatic motor, electric motor and hydraulic motor. The system is modular in design which allows a single operator to set up and perform non-pressure taps safely and quickly. The basic system can be used on pipes from 6"–20" (150–500mm) O.D. and the capacity can be extended by simply adding chain to the hold down mechanism. Set up normally takes 5–10 minutes and actual cutting time is 5–10 minutes depending on pipe material and wall thickness.

TWINTITE™

For torquing both screws simultaneously. The TwinTite™ attaches to most 3/8" reversible cordless drills. Fits couplings 1 1/2" to 4". Individual torque settings allow each clamp screw to be tightened to correct torque specification. The torque is preset to 60in lbs. or 80in lbs. and can be recalibrated with a torque wrench. The TwinTite™ is quick and easy to attach to your drill and the wire form can be bent to fit other drills.

1990	TwinTite™ 60in/lb. with 5/16" replacement socket	2.5 lbs.	(1.2kg)
1992	TwinTite™ 80in/lb. with 5/16" replacement socket	2.5 lbs.	(1.2kg)
1994	TwinTite™ 80in/lb. with 3/8" replacement socket.....	2.5 lbs.	(1.2kg)

Attachment procedure is 3 simple steps:

1. Place gear box shaft in drill chuck and tighten
2. Place wire form around drill handle and wire ends into clamp holes on bottom of gear box and tighten screws.
3. Assemble 2-piece clamp around wire form near drill handle base and tighten the screws.

SOIL PIPE COUPLING TORQUE WRENCH

This durable "T-Handle" type torque tool with a contoured comfort-fit handle features a removable socket and a unique locking collar, which allows the tool to be used as an untorqued snug-up or back-off, as well as a conventional torque tool. With the locking collar retracted, the tool torques to the right (tightening), while ratcheting to the left. When proper torque value has been achieved, the mechanism slips internally and over-tightening is impossible.

1980 T-Torque for tightening 5/16" coupling nuts to 80 in. lbs.....	Weight 1 lb. (.5kg)

WHEELER MANUFACTURING

DIVISION OF REX INTERNATIONAL U.S.A., INC.

Wheeler Manufacturing was established in 1957 with the invention of the chain type snap cutter for cast iron and clay tile pipes. It was a revolutionary tool which has since been adopted worldwide. This innovative product was followed by several other industry firsts, such as cutters for glass tube, power bevelers for PVC pipes, power torque wrenches for soil pipe couplings, shut off tools for copper and poly pipes, and sewer tapping machines. Today Wheeler Rex sells worldwide with a wide variety of tools for the piping professional.

In 1988, Wheeler became part of the Rex Industries family. Rex Industries produces the highest quality and largest variety of pipe threading machines in the world. Rex has been an industry leader for over 75 years and has developed advanced features such as through the die head oiling, auto open die heads, notch type quick adjustments, and ball detent die location. Their quality is backed up by the best warranty in the business.
