

EGR Adapter Mercedes 3.0L (2007-2011) Part No. 069-3398

CAUTION:

Always wear gloves and safety glasses when performing this service

EGR System Consists of:

- Hot side EGR valve (before EGR cooler) controls exhaust gases for proper emissions control of No_x gases
- EGR cooler (controls temperature of exhaust gases to the air intake to the engine)
- EGR temperature sensor (measures EGR cooler exhaust temperature and efficiency)
- Swirl flaps (control airflow under different engine speed and loads) located inside intake plenum

These items are critical for proper emissions management control and must be cleaned on a regular basis for optimum efficiency.

First steps before any service can be performed:

1. Add Part# 400-3012 DieselTune™ Max Strength Fuel Injector Cleaner to the vehicle's fuel tank.
2. Remove plastic engine cover.
3. If engine is hot, the EGR cooler must be cooled – see Note in step 10

Tools and Adapters Required:

069-3398

069-3399

500-0170

Locations of EGR components:

- EGR temperature sensor – EGR cooler outlet pipe
- EGR valve (figure 2)

EGR Cooler Cleaning Procedure:

4. Remove turbo charger air outlet pipe to provide access for removal of EGR cooler outlet pipe (see figure 3). Be careful not to lose the o-ring at the turbo charger outlet

5. Remove EGR valve and set on top of engine with the electrical connector attached. Install 069-3519 in its place (see figure 4), install only 2 of the 3 bolts hand tight.

Quick Tip: Place the EGR cooler outlet pipe into a bucket/container and fill container with EGR fluid until submerged, this will aid in the dislodging of soot from the pipe while the EGR cleaning procedure is performed, see step 19.

6. Install 069-3398 adapter (see figure 6&7) in place of above EGR cooler outlet pipe.

Note: Lubricate o-ring on EGR cooler outlet (see figure 5) and adapter before installation, this will aid in not pinching the o-ring when installing exhaust side adapter. Remove one bolt from air intake pipe to secure the exhaust side adapter bracket to the intake pipe (see figure 6).

7. Reinstall bolt from air intake pipe and tighten as per manufacture specification (see figure 8). Reinstall the turbo charger air outlet pipe removed in step 4.

8. Attach EGR manifold 069-3399 to EGR adapter 069-3398. Attach EGR tool to 069-3399. Ensure air valve and fluid valve are closed – see EGR tool user guide.
9. Unscrew fill cap and fill with 32oz (946mL) of Part# 400-0280 EGR System Cleaner. For first application or severe coking, 64 oz. may be required.
10. Reinstall the fill cap and hang tool from the hood latch. Connect shop air. Set air pressure on EGR tool to 40-45 psi.

NOTE: If engine is hot, the EGR cooler must be cooled before treatment can start. Before step 11 can proceed, ignition must be on and, using a scan tool, command the EGR open. Open EGR tool air valve, keeping the fluid valve closed, turn valve on the EGR manifold 069-3399 to exhaust and flush cooler with air for 2 minutes.

11. Start vehicle engine. Using the scan tool, command the EGR open.
12. Set valve on adapter to exhaust (see figure 9).

13. Open air valve on EGR tool, adjust regulator to maintain initial pressure, and then open the fluid valve on the EGR tool.
14. After 1/4 of the fluid has been consumed, turn the fluid valve off and let the air flow for an additional 2 minutes to flush deposits into exhaust stream.
15. Repeat step 12-14 allowing another 1/4 of the fluid to be consumed.
16. Set valve on adapter to intake (see figure 10). Using a scan tool, command the swirl flaps open and close several times throughout this step.

17. Continue service until EGR tool is empty.

Note: Let the vehicle operate for an additional 5 minutes and rev the engine several times to clear all residual fluid.

18. Turn the fluid and air valve on tool to the closed position. Detach shop air line and depressurize the tool by rotating the regulator knob counter clockwise.

19. After EGR cooler outlet pipe has soaked for 15 minutes, clean the pipe using EGR cleaning fluid and a flexible 1" round brush (see figure 11) inside a bucket or waste container. Fluid can be saved to be used on other EGR components if required.

20. Remove adaptor and reassemble vehicle components in the reverse order of removal. Wipe off EGR temperature sensor using the EGR cleaning fluid before installing.

Note: When installing the turbo charger outlet pipe remember to place the o-ring on the turbo charger side first in order not to pinch the o-ring, lubricating the o-ring will aid in the assembly

21. Add one bottle of Part# 400-3022 DieselTune™ Complete Fuel Supplement to the vehicle's fuel tank.
22. After service, reset any engine codes and perform a road test to clear any residual fluid from the system. Vehicle may go through Regen cycle during road test.
