

VERTICAL GARDEN SOLUTIONS

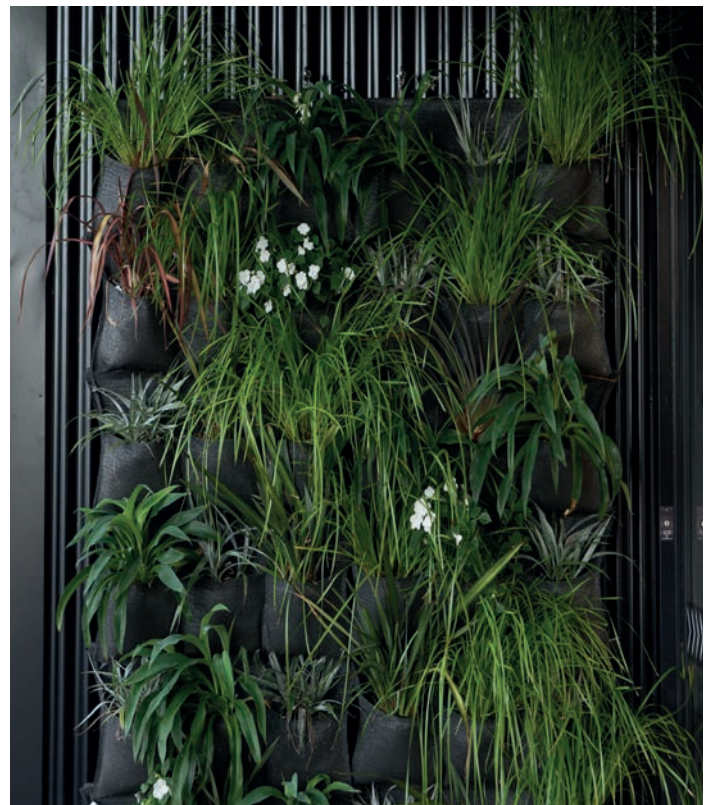

GO UP THE WALL WITH HANGING GARDENS

We specialise in the design and installation of green walls and green facades for commercial and residential properties and public spaces. Vertical gardens are used as focal points, screens and living skins in buildings, homes and public spaces to beautify and green up urban areas.

WHY VERTICAL GARDENS?

Green walls and green facades transform drab walls into striking features. Previously under-utilised surfaces and areas can be turned into beautiful spaces that also provide habitats for flora and fauna – improving the biodiversity of urban settings. Greenery on walls helps to remove harmful air pollutants making the air cleaner and healthier.

Interior vertical gardens insulate buildings reducing dependence on cooling and heating systems. Interior vertical gardens also improve air quality inside the building, counteracting the drying effects of heating and air conditioning which provide healthier environments and improve working conditions and productivity.

WHY HANGING GARDENS?

Our vertical gardens are designed to be long-lasting, sustainable and highly resilient to seasonal climate changes. Every Hanging Garden is designed in consultation with our clients and customised to make the best of the site features, lighting and other conditions.

Our products are modular and versatile and can be engineered to fit the dimensions of each installation. We use only high quality materials including marine grade stainless steel rods, rigging and fixtures, and fabric garden pockets that are UV resistant, durable, washable and guaranteed for 15 years.

Hanging Gardens are soil-based gardens and our unique removable felt pockets provide good soil depth, retain a high degree of moisture and keep the roots aerated to ensure plant health. Planting and garden maintenance is made easy as the felt pockets can be simply swapped out or replaced as needed.

Automatic irrigation using drip feeding small amounts of water each week is water conserving and, ideally, uses stored rainwater from the roof. This approach delivers low operating costs, easy maintenance and water management benefits.

Our vertical garden solutions are quick to install and light weight – approximately 35 kilograms per square metre with mature plants and fully saturated. Hanging Gardens offer an end-to-end service including design, plant selection and sourcing, manufacture, installation and maintenance. Our unique solutions beautify and green up walls and fences and can be used as single-sided structures or double-sided space dividers.

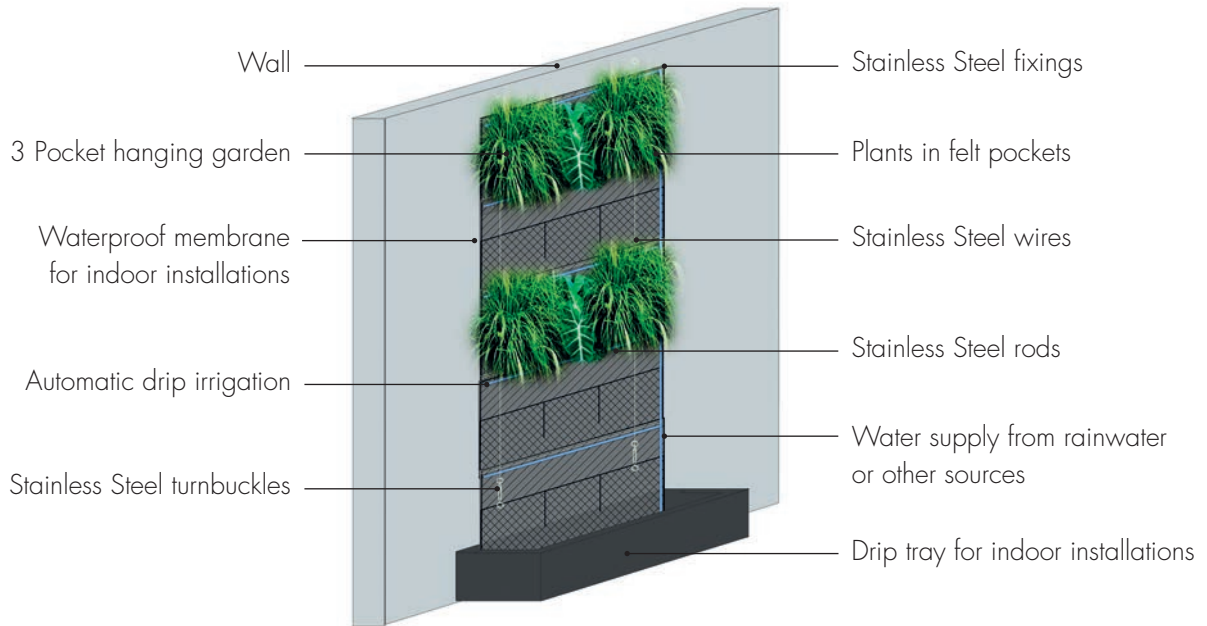

FEATURES

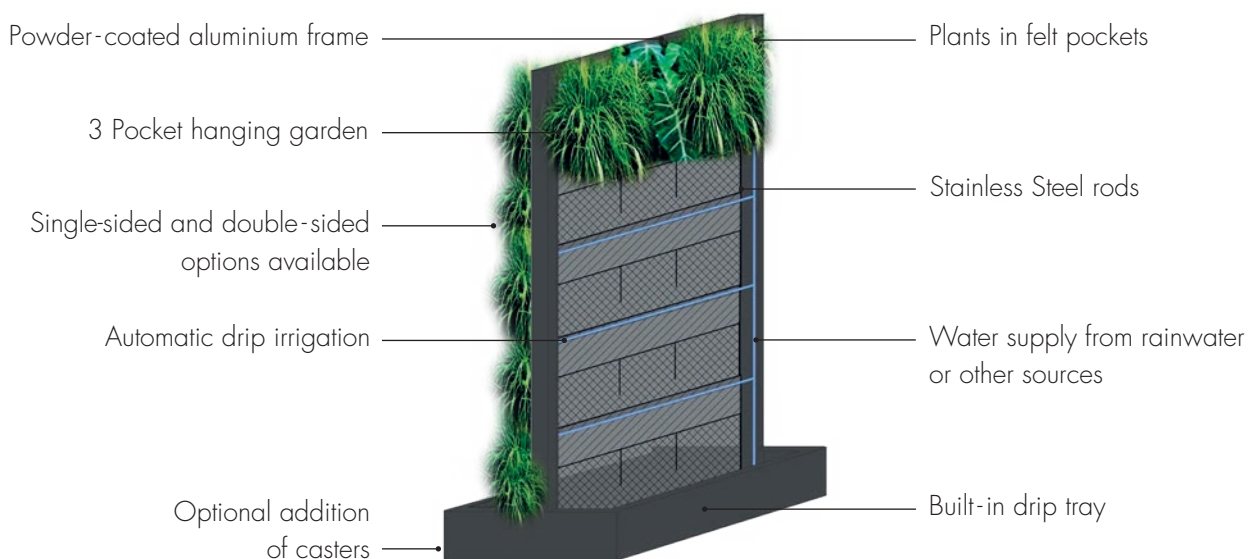

- Custom-designed solutions
- High quality materials
- Unique, removable felt pockets for plant health
- Modular and versatile
- Light weight and quick to install
- Soil-based, long-lasting and sustainable gardens
- Ideal for a wide range of plants including annuals, perennials, New Zealand natives, exotic sub-tropicals, herbs, vegetables and other edibles.
