

BARLOW TYRIE

quality since 1920

CUSHION FILL OPTIONS

All of our cushion fill options are constructed with mold and mildew resistant materials and designed to be used outdoor year round. They are wrapped in Dacron® to provide a crown effect toward the center of the cushion and to assure a snug fit. Regardless of the fill you choose, we recommend that cushions be covered or stored when not in use as dirt and pollen build up can mold and stain. Covering and/or storing cushions will add many years to their life. If cushions become wet, place on end in a dry, sunny area and unzip where possible for quickest drying method.

STANDARD FILL

Densified Polyester Fiber: This fill option has the look and feel of medium density foam and will allow any water that may seep through the outer casing to easily drain. This fill is adequate for normal seasonal residential use; it is not recommended for daily residential use or commercial applications.

WRAPPED FOAM OPTION

Interior Grade Foam: This fill option uses medium density foam encased in a highly water resistant polypropylene ticking (bag). This option gives you the comfort of interior furniture with an extraordinary level of water resistance. This fill is not 100% waterproof so we recommend covering or storing cushions during periods of heavy rain.

EZ-DRI® FOAM OPTION

EZ-DRI® Foam: This premium fill option is made from the highest quality flow-thru foam available and thus gives you a firmer feel, excellent drainage and durability. This fill option is recommended for commercial use.

Note: Apex and Horizon dining cushions come standard with the wrapped foam option and are not available in standard or EZ-DRI® fills
