

CARE INFO FOR tretford® ACOUSTICORD WALLCOVERING

INTRODUCTION

Acousticord high traffic acoustic wallcarpet is easy to maintain being fusion bonded and constructed of 80% goat hair, 15% nylon and 5% viscose. It resists dust build-up and is less vulnerable to abrasions and can be regularly vacuumed. Regular maintenance is important. Acousticord does not attract or easily hold dirt and is cleaned under normal conditions with a handheld brush vacuum. Periodically vacuum in both directions. Pay particular attention to surfaces directly in line with heating/air conditioning vents. Those areas may require more frequent vacuuming. Remove spots and stains with stain removers

DRY CLEANING SYSTEMS

Using a dry cleaning system for spots and spills leaves the wallcarpet uniformly clean with no evidence of spot removal. Quick action may prevent a permanent stain. Low moisture is suitable for both periodic and deep cleaning.

SPOT REMOVAL

Many accidental spills and stains can be solved if a few simple rules are followed.

- 1. Do not use shampoos and cleaners with a spirit base.
- 2. If spillages occur, never rub the carpet. Spillages and cleaning solutions should be blotted up by gently pressing a white towel or similarly absorbent material against the affected area.
- 3. Act quickly. The longer a spill is left unattended, the harder it is to remove.

Spot Removal Guidelines, see method description below:							
Blood	J	Fruit	D	Mascara	A	Tea	D
