Suihkuseinät:

Suihkuseinät on valmistettu useista eri materiaaleista. Lasit ovat 6 mm:n karkaistua turvalasia. Suihkuseinät voidaan puhdistaa tavalliseen tapaan. Puhdista säännöllisesti käyttäen tavallisia puhdistusaineita. Suosittelemme puhdistukseen IDO Showercleania. Vältä teräsvillan ja vihreän hankaussienen käyttöä. Ole varovainen suolahapon, rikkihapon ja lipeän käytössä. Liuottimet kuten aseton, ohenteet ja trikloorietyleeni ovat vahingollisia. Pyyhi suihkuseinät ja lattia kuivaimella aina suihkussa käynnin jälkeen. Näin suihku pysyy puhtaana ja raikkaana. Kylpyhuoneessa tulee olla hyvä ilmanvaihto. Voit ehkäistä kondensointia ja homeen muodostumista käyttämällä esimerkiksi kylpyhuonetuuletinta.

SE

Duschvägg:

Dessa duschväggar består av flera olika material. Väggen är av 6 mm härdat säkerhetsglas. Tack vare detta går det mycket bra att rengöra på vanligt sätt. Gör rent ofta och använd vanliga rengörningsmedel, vi rekommenderar Showerclean. Undvik att använda stålull eller grön fibersvamp och var försiktig med saltsyra, svavelsyra och kaustiksoda. Lösningsmedel som aceton, förtunningsmedel eller trikloretylen är också skadligt vid rengörning. Skrapa av duschväggar och golv med en gummiskrapa varje gång du duschat så håller du rent och fräscht. Det är också viktigt att rummet har god ventilation. Använd t.ex. en badrumsfläkt för att förhindra att det bildas kondens och mögelsvamp.

NO

Dusjvegg:

Disse produktene består av flere forskjellige materialer. Veggen er laget av 6 mm herdet sikkerhetsglass. Likevel går det fint å gjøre rent på vanlig måte. Gjør rent ofte, og bruk vanlige rengjøringsmidler, vi anbefaler Showerclean. Unngå å bruke stålull eller grønn fibersvamp, og vær forsiktig med saltsyre, svovelsyre og kaustisk soda. Løsemidler som aceton, fortynningsvæsker og trikloretylen er også skadelige ved rengjøring. Dra en gumminal over dusjvegger og gulv hver gang du har dusjet, så holder du det rent og fint. Det er også viktig at rommet har god ventilasjon. Bruk f.eks. en baderomsvifte for å forhindre at det oppstår kondens og mugg.

GB

Shower enclosure:

These products consist of several different materials. The wall are made of 6 mm toughened safety glass. Despite this, it's perfectly fine to clean them in the usual way. Clean regularly and use normal cleaning agents, we recommend Showerclean. Avoid the use of steel wool or green fibre sponges, and take care with hydrochloric acid, sulphuric acid and caustic soda. Solvents such as acetone, thinners or trichlorethylene are also harmful when used in cleaning. Keep the shower clean and fresh by wiping shower enclosures and floors with a squeegee after every shower. It's also important to keep the room well ventilated. Use a bathroom fan, for example, to prevent the formation of condensation and mildew.

EE

Dušiseinad:

Need tooted koosnevad paljudest erinevatest materjalidest. Seinad on 6 mm karastatud turvaklaasist. Sellest hoolimata on neid väga lihtne tavapärasel moel puhastada. Puhastage sageli ja kasutage tavalisi puhastusvahendeid, soovitage kasutada Showerclean puhastusvahendit. Väldige traatnuustikuid ja kõvapinnalisi küürimissvamme ning olge ettevaatlik soolhappe, väävelhappe ja kaustilise soodaga. Lahustid, nt atsetoon, vedeldid ja triklooretüleen on samuti puhastamisel kahjulikud. Tõmmake dušiseinad ja põrand pärast igat dušši kummiharjaga üle, siis püsib ruum puhas ja värsk. Lisaks on oluline, et ruumis oleks hea ventilatsioon. Kasutage kondensaadi kogunemise ja hallituse tekke takistamiseks nt vannitoaventilaatorit.

LT

Dužo kabinos sienelė

Šie gaminiai yra sukurti iš kelių skirtingų medžiagų. Siena yra pagamintos iš 6 mm storio grūdintojo saugaus stiklo. Nepaisant to, juos galima labai gerai nuvalyti paprastu būdu. Valykite dažnai ir naudokite paprastas valymo priemones, rekomenduojame Showerclean. Venkite naudoti plieno vielučių arba natūralių pluoštų kempines; būkite atsargūs, naudodami druskos rūgštį, sieros rūgštį ir natrio šarmą. Valant nerekomenduojama naudoti ir skiedimo priemonių, tokių kaip acetonas, skiediklis arba trichloretilenas. Norėdami, kad dušo kabina būtų švari ir gaivi, po kiekvieno prausimosi nuvalykite dušo kabinos sienelės ir grindis gumine juoste. Didelę reikšmę turi tai, kad patalpoje būtų gera ventilacija. Norėdami išvengti kondensato sankaupų ir pelėsių grybelių veisimosi, naudokite, pavyzdžiui, vonios kambario ventiliatorių.

LV

Duškabīnes siena

Šie izstrādājumi ir veidoti no vairākiem dažādiem materiāliem. Siena ir no 6 mm bieza rūdīta drošības stikla. Neraugoties uz to, tos var ļoti labi notīrīt parastā veidā. Tīriet bieži un izmantojiet parastos tīrīšanas līdzekļus, mēs iesakām Showerclean. Izvairieties no tērauda stieplu višķu vai zaļo šķiedru sūkļu lietošanas; ievērojiet piesardzību, lietojot sālskābi, sērskābi un kodīgo nātriju. Tīrīšanā nav ieteicams izmantot arī šķīdināšanas līdzekļus, tāds kā acetons, šķīdinātājs vai trihloretilēns. Lai duškabīni uzturētu tīru un svaigu, pēc katras mazgāšanās notīriet duškabīnes sienas un grīdu ar gumijas sliedi. Liela nozīme ir tam, lai telpā būtu laba ventilācija. Lai nepieļautu kondensāta uzkrāšanos un pelējuma sēnišu vairošanos, izmantojiet, piemēram, vannas istabas ventilatoru.
