Environmental Product Declaration

In accordance with ISO 14025:2006 and EN 15804:2012+A2:2019/AC:2021 for:

Thermostatic Shower Mixers based on reference product 57480

from

damixa

This EPD covers multiple products, based on worst-case results.

Programme:	The International EPD® System, www.environdec.com
Programme operator:	EPD International AB
EPD registration number:	S-P-11389
Publication date:	2024-02-28
Valid until:	2029-02-28

An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at www.environdec.com

Accountabilities for PCR, LCA and independent, third-party verification
Product Category Rules (PCR)
CEN standard EN 15804 serves as the Core Product Category Rules (PCR)
Product Category Rules (PCR): Construction products, 2019:14, version 1.3.1
PCR review was conducted by: *The Technical Committee of the International EPD® System. Chair of the PCR review: Claudia A. Peña. The review panel may be contacted via info@environdec.com*
Life Cycle Assessment (LCA)
LCA accountability: Uniben Tettey, RISE Research Institutes of Sweden
Third-party verification
Independent third-party verification of the declaration and data, according to ISO 14025:2006, via: ☒ EPD verification by individual verifier Third-party verifier: Hannu Karppi, Ramboll Finland Oy Approved by: The International EPD® System
Procedure for follow-up of data during EPD validity involves third party verifier: ☐ Yes ☒ No

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but registered in different EPD programmes, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

Company information

Owner of the EPD: FM Mattsson Denmark ApS

Contact: Phone: +45 88330034
Mail: danmark@fmmattssongroup.com
Web: www.damixa.dk

Description of the organisation: Damixa is a Danish design and engineering company and our mission is to create timeless design combined with practical features and good workmanship.
In 2014, Damixa became a part of the Swedish FM Mattsson Group, who is market leading in mixers and shower systems in the Nordic region.
FM Mattsson Group conducts the sale, manufacturing and product development of water mixers and related products under the established brands of FM Mattsson, Mora, Damixa, Hotbath, Aqualla and Adamsez.
The group's vision is to be the customer's first choice in the bathroom, kitchen and beyond.
In 2022 the business generated sales of more than 1.9 billion SEK from its companies in Sweden, Norway, Denmark, Finland, Benelux, UK, Germany and Italy and had 559 employees.

FM Mattsson Group is listed on Nasdaq Stockholm.

Product-related or management system-related certifications: Designation according to EN 1111.

Name and location of production site(s):

FM Mattsson Denmark ApS
Hvidkærvej 48
5250 Odense SV
Denmark

Product information

Product group name: Damixa Thermostatic Shower Mixers.

This EPD covers the product group - Damixa Thermostatic Shower Mixers. The EPD is based on the worst-case approach, where results per kg product for the worst-case product within the product group are declared. The criterion for defining the worst-case product is mainly based on the net weight of the included products in the product group.

Reference product and included products: This EPD covers the product group - Damixa Thermostatic Shower Mixers and the reference wort-case product is 57480 Zero thermostatic mixer. The complete list of products covered by the EPD is presented at the end of this EPD document.

Product group identification: Thermostatic Shower Mixer, according to EN 1111.

Product group description: Damixa Thermostatic Bath and Shower Mixers for installation in bathrooms. The mixers are mechanically operated to mix hot and cold water, as well as regulate the water flow. The products come with two different water inlet dimensions, 150cc and 160cc to accommodate installation requirements on different markets. Damixa bath and shower mixers include built-in features such as Eco-click for water saving and anti-scalding temperature limitation.

UN CPC code: 42911 – Sinks, washbasins, baths and other sanitary ware and parts thereof, of iron, steel, copper, and aluminum.

Geographical scope: The processes in modules A1-A3 have been modelled for China and Europe. The use phase (module B7) and end-of-life (module C) of the product’s performance been modelled the European region.

LCA information

Functional unit / declared unit: 1 kg of Damixa Thermostatic Shower Mixer

Reference service life[1]: 16 years

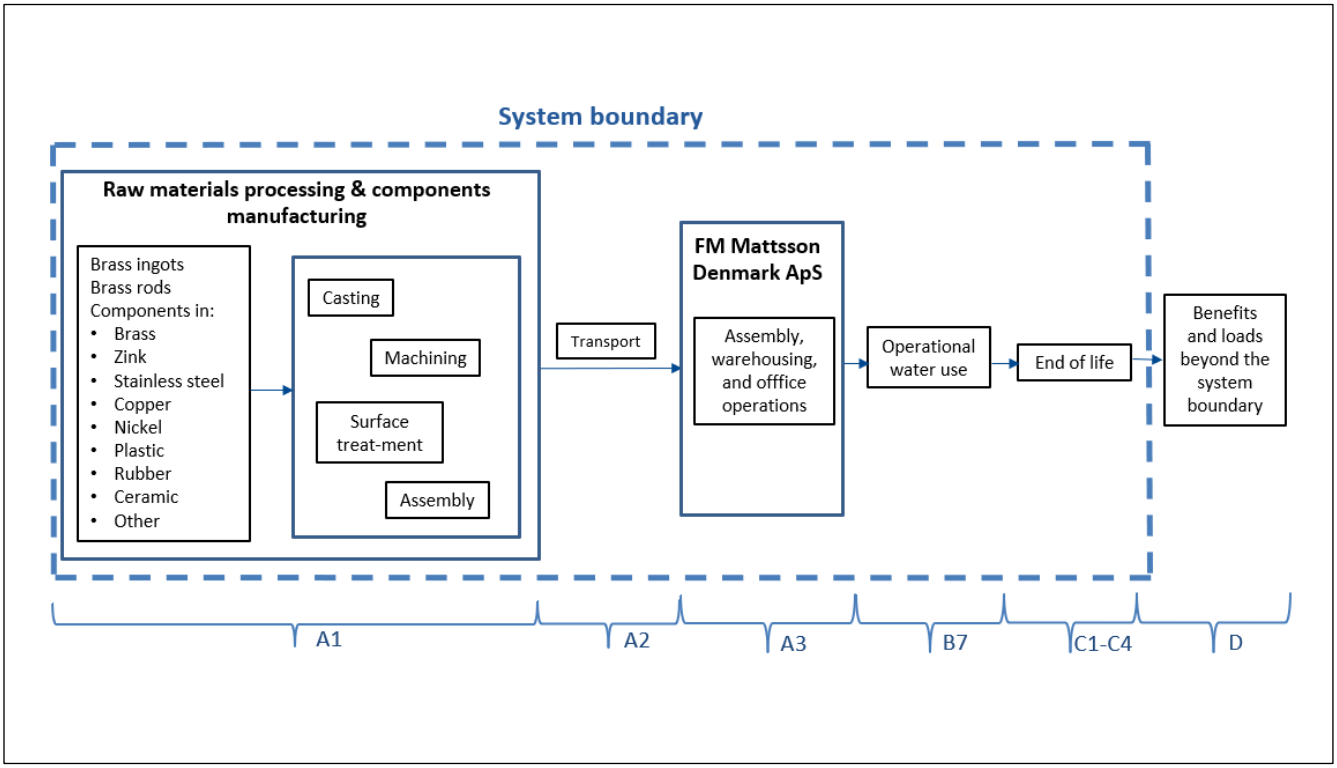
Time representativeness: The data used for the LCA calculation covers bill-of-materials as well as operations at FM Mattsson Denmark ApS for the year 2022.

Cut-off criteria: All materials and energy used to manufacture the thermostatic shower mixers are included.

Database(s) and LCA software used: Ecoinvent 3.8 and SimaPro 9.5.0.0

Description of system boundaries: Cradle to gate (A1-A3) with options, i.e., also operational water use module B7, waste management modules C1–C4 and beyond end-of-life module D.

System diagram:



[1] The reference service life is defined based on Cordella M. et al. (2014).

More information

LCA Practitioner: Uniben Tettey, RISE Research Institutes of Sweden

Additional information: Modelling of all product components are based on production bill-of-material for the year 2022.

Supplier specific electricity mixes and corresponding GWP impact: China, southwest region – Main supplier, (90% grid electricity and 10% solar power): 301 g CO_2/kWh; China, southwest region – other suppliers: 326 g CO_2/kWh; China – unknown location: 983 g CO_2/kWh; Italy: 445 g CO_2/kWh.

Electricity used in module A3: Purchased electricity for operations at FM Mattsson Denmark ApS is 100% renewable based, from wind power with a GWP impact of 14.5 g CO2-eq/kWh.

Information about scenarios and additional technical information: Information about the scenario for operational water use for this product is provided under “Additional Information” below.

Modules declared, geographical scope, share of specific data (in GWP-GHG results) and data variation (in GWP-GHG results):

	Product stage			Construction process stage		Use stage							End of life stage				Resource recovery stage

LCA MODULES	
A1 Raw material supply: This module relates to raw material extraction and processing, processing of secondary material input (e.g. recycling processes), transport to component manufacturing and component manufacturing.	**C1 De-construction:** This module relates to the dismantling of the thermostatic shower mixers at the end-of-life. It is assumed that the dismantling is done manually and the related impacts are assumed to be negligible.
A2 Transportation: This module relates to transport from raw material extraction and processing, and component manufacturing to suppliers and FM Mattsson Denmark ApS.	**C2 Waste Transport:** This module relates to the transport of the dismantled thermostatic shower mixer to final waste disposal. An average distance of 100 km from demolition site to waste processing site is assumed.
A3 manufacturing: This module covers operational activities at FM Mattsson Denmark ApS. The processes cover assembly, warehousing and office operations for the thermostatic shower mixers at FM Mattsson Denmark ApS.	**C3 Waste processing:** This module covers impacts related to sorting and recycling processes for the relevant material components of the thermostatic shower mixers. It is assumed that 90% of the brass and non-brass metals as well as 74% of the packaging wastes are recovered for recycling. The remaining portions of the brass, non-brass metals as well as all the plastics and rubber components are assumed to be incinerated with energy recovery.
A5 Construction installation: This module covers transport of cardboard and paper packaging wastes to waste management and their incineration. It is assumed that 26% of the packaging waste is incinerated.	**C4 Waste disposal:** This module relates to waste disposal processes such as landfilling. For the basin mixers it is assumed that the ceramic components in the studied products are landfilled.
B7 Operational: This module covers the production, heating and wastewater treatment of tap water use over the reference service life of one thermostatic shower mixer used by one person. Further details on the scenario for operational water use are given in “Additional Information” below.	**D Benefits and loads beyond system boundary:** This module covers benefits and loads associated with recovery/recycling beyond the defined system boundary for the thermostatic shower mixer. This includes benefits from recycling and waste incineration.

Additional environmental information

Overall, the results for the potential environmental impacts over the entire life cycle of the thermostatic shower mixers show that the use phase (B7) related to operational water use is by far the most significant contributor. It illustrates the importance of the use phase in reducing environmental impacts associated with sanitary fitting products. Design of energy-efficient products, choice of renewable energy sources during the use phase as well as appropriate user behaviour can play a significant role in lowering the use phase impacts. Studies have shown that up to 40% energy savings can be realized through energy-efficient taps and showers (Dodoo et al. 2017; Folkeson et al., 2017).

Operational water use scenario

For this product, the scenario for operational water use has been modelled based on average performance parameters for thermostatic shower mixers derived from a study by Cordella M. et al. (2014), on different sanitary products within the EU and information from the European Water Label (EWL, 2022). The parameters used to estimate the water use for the thermostatic shower mixers as well as the energy mix for water heating are given in the tables below. Based on the given parameters and assumptions, the annual average water consumption for this product is 2 555 liters per person. About 90% of this is assumed to be hot water use and the corresponding annual energy use to heat the water is about 60 kWh. Note that the corresponding climate impact for module B7, 378 kg CO2-eq is based on an assumed flow rate of 1 liter/minute for 16 years of use by one person and also includes water production and distribution, as well as waste water treatment. In order to estimate the climate impact for B7 for a specific thermostatic shower mixer, the climate impact result of 378 kg CO2-eq should be multiplied by the actual nominal flow rate and further information on the nominal flow rates of the listed thermostatic shower mixers is available at www.damixa.dk

Parameters used to model the operational water use for the thermostatic shower mixers

Parameter	Value	Unit
Reference flow	1	l/minute
Use cycles	1	Per person/day
Duration of use cycle	7	Minute
Share of hot water use	90	%
Cold water inlet temperature	15	ºC
Outlet mixed water temperature	38	ºC
Specific heat capacity of water	4.18	kJ/(kg·K)
Density of water	0.981	kg/l

The energy mix for the operational water use scenario is modelled based on data for different fuel mixes for water heating in EU households for 2020 (Eurostat, 2022). In 2020, 15% of the total final energy use in the EU was for water heating in the residential sector.

Energy mix for operational water heating modelling	
Energy source	**Share, %**
Solid fossil fuels and peat	8.97
Natural gas	22.18
Oil and petroleum products	16.78
Renewables and biofuels	11.84
Electricity	13.79
Heat	26.44
Total	100
Corresponding GWP	346 g CO2-eq/kWh

Differences versus previous versions

This is the first version of the EPD so there are no differences versus previous versions of the EPD.
