

Kentaur

Turnstiles

Full-height gates

Secure Kentaur Turnstiles

Versatile
Durable
Modular

The robust Kentaur turnstiles and full-height gates are especially suitable for securing the perimeter of buildings and property. Versatile versions enable individual combinations of multiple units to be put together. The end point locking system developed by dormakaba prevents people from being trapped in the gates.

Versatility

The Kentaur product series offers a modular design. Two, three and four-winged units with straight or U-shaped bars can be combined with each other. The same applies for units with bicycle doors, integrated doors, or of resistance class RC2. The roofs fit with any of the single, multiple or space-saving double units.

Minimal power consumption

The quiet low-energy drive consumes very little energy and adapts to the speed of the person entering.

Safe passage

The end point locking implemented in Kentaur turnstiles prevents people from becoming trapped or jammed. After release the turnstile may be stopped at any time and rotated backwards as long as it has not yet completed half of its rotation. Once the turnstile has completed half of its rotary motion, the unit can only be exited in the released direction.

Advantages of Kentaur Turnstiles

The right combination of security, user comfort and personal safety.

- Users cannot become stuck thanks to end point locking
- Versions with integrated bicycle door, full-height gates for barrier-free access or as a goods entrance or in resistance class RC2
- Space-saving double units
- Modular combination of bars, roofs, guiding and barrier elements
- Lasting quality for indoor and outdoor installation
- Stainless steel version of the system possible
- Rotating speed adapts to the pedestrian
- Low-energy drive
- Low power consumption
- Behaviour in the event of a power failure can be freely determined
- Can be used in regions with harsh environmental conditions
- IP55 protection possible
- Integrated, parameterisable random generator
- Optional secondary identification for additional security
- Sensor-monitored pass-through signal possible
- Difference counter possible in both directions
- Spacing between shearing edges eliminates risk of injury
- Suitable for max. snow load of 4.28 kN/m^2 = snow load zone 3 according to DIN EN 1991-1-3
- Suitable for max. wind speed of 108 km/h = wind load zone 4 according to DIN EN 1991-1-4
- All distances are dimensioned in accordance with DIN EN 17352 so that there is no risk of injury

Kentaur full-height gates in a matching design offer a fitting addition for disabled access.

The ideal solution for any access point

01
Turnstile with integrated full-height gate as entrance to an underground car park

02
Controlled access to a stadium

03
Turnstile offering additional protection for a restricted area

04
Full-height gate as goods entrance

For reliable security at:

- Manufacturing plants
- Company sites
- Airports and ports
- Power plants
- Car parks
- Bicycle stands
- Correctional facilities
- Military installations
- Educational centres
- Stadiums
- Amusement parks

Throughput rate = up to 20 per minute
Security level = ●●●●○
Comfort = ●●●○○
Staff supervision = no

Roofs to prevent people climbing over and for weather protection

Roof D1

Hot-dip galvanised steel substructure, trapezoidal sheet cover in RAL 9002 grey-white (optional plastic-coated in a RAL colour). For multiple units we supply one continuous roof. For four units or more a central water outlet is required. The distance between units is 50 mm.

Roof D2

Hot-dip galvanised steel substructure, trapezoidal sheet cover in RAL 9002 grey-white (optional plastic coating in a RAL colour). With roof edge in RAL 9006 and water outlet in grey PVC. For multiple units we supply one continuous roof. The distance between units is 50 mm. The roof edge is continuous with a length of max. 6.4 m.

Roof D3

Hot-dip galvanised steel substructure, trapezoidal sheet cover in RAL 9002 grey-white (optional plastic coating in a RAL colour). With roof edge in RAL 9006 and water outlet in grey PVC. Roof underside with aluminium cladding in RAL 9010. For multiple units we supply one continuous roof. The distance between units is 50 mm. The roof edge is continuous with a length of max. 6.4 m.

All roofs are able to withstand a max. snow load of 4.28 kN/m² = snow load zone 3 according to DIN EN 1991-1-3, and max. wind speed of 108 km/h = wind load zone 4 according to DIN EN 1991-1-4.

Roof D1 – with trapezoidal sheet cover

Roof D2 – with trapezoidal sheet cover, roof edge profile and water outlet

Roof D3 – with trapezoidal sheet cover, roof edge profile, panelling and water outlet

Our Sustainability Commitment

We are committed to foster a sustainable development along our entire value chain in line with our economic, environmental and social responsibilities toward current and future generations. Sustainability at product level is an important, future-oriented approach in the field of construction. In order to give quantified disclosures of a product's environmental impact through its entire life cycle, dormakaba provides Environmental Product Declarations (EPD), based on holistic life cycle assessments.
