

Seamless access starts here

Digital Wallet by dormakaba.
No badges. No apps. Just instant access.

Access has evolved

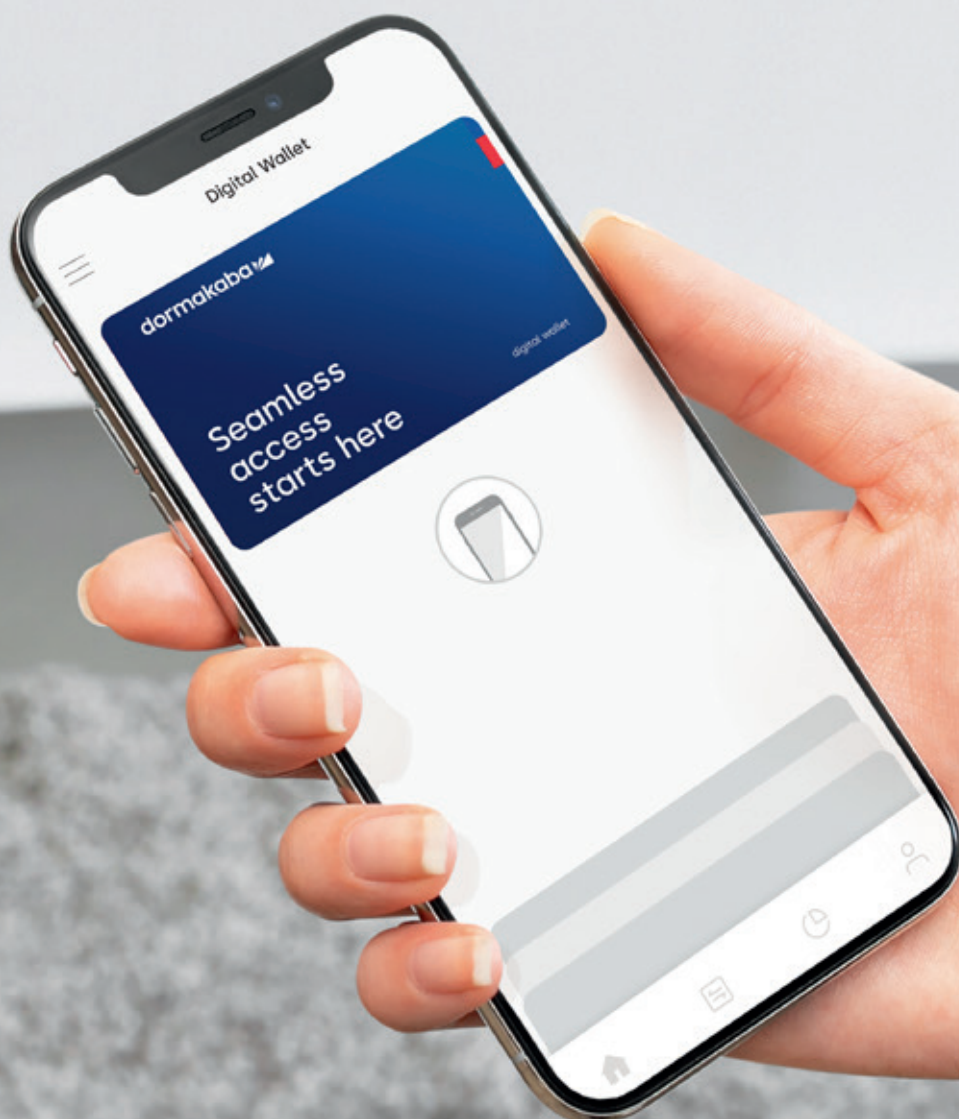

dormakaba Digital Wallet enables secure access using any phone or smartwatch – no badges, no apps, no need for connectivity. Credentials are stored directly on the device, allowing users to unlock doors with a simple tap.

For organizations, it reduces the cost and complexity of managing physical credentials while strengthening security and simplifying operations. For both employees and visitors, it creates an experience that feels simple, familiar and reliable.

How Digital Wallet works

Secure app-less access
from device to door

Compatible with mobile phones and smartwatches, Digital Wallet uses NFC-enabled devices to securely store and transmit access credentials for seamless, app-less entry. Users can simply tap to unlock doors without opening an app or even unlocking their phone or smartwatch. Built on Secure Element technology, Digital Wallet delivers fast, encrypted authentication without requiring an active connection. Credentials are also quick and easy to deploy — users simply receive an email invitation, tap “Add to Wallet,” and their credential is instantly ready to use. With Apple Power Reserve support, access remains available for up to 5 hours after battery shutdown, ensuring users are never locked out. Digital Wallet also integrates with existing access control systems and supports both native and external credential management models for complete flexibility.

Upgrade to the Digital Wallet experience

Digital Wallet redefines how access is managed across buildings, doing away with the need for apps, RFID badges and physical keys – replacing them with secure, device-based access that works instantly.

Security is built directly into the device, while self-service controls give users greater visibility and management over their credentials. If a phone or smartwatch is misplaced, its owner can instantly lock the device remotely and restore functionality once it is recovered – putting access control in the user's hands, anytime. At the same time, simplified credential management reduces administrative effort, while eliminating physical keys helps lower operational costs and environmental impact. Flexible architecture also ensures seamless integration with existing access control systems.

Key benefits:

No apps

Tap-to-enter access with no app launch or login process.

Built-in security

Secure Element protection and end-2-end encryption.

Credential control

Instant credential suspension and restoration.

Lower overheads

No cards, printers, replacements or distribution.

Easy integration

Works with existing access control environments.

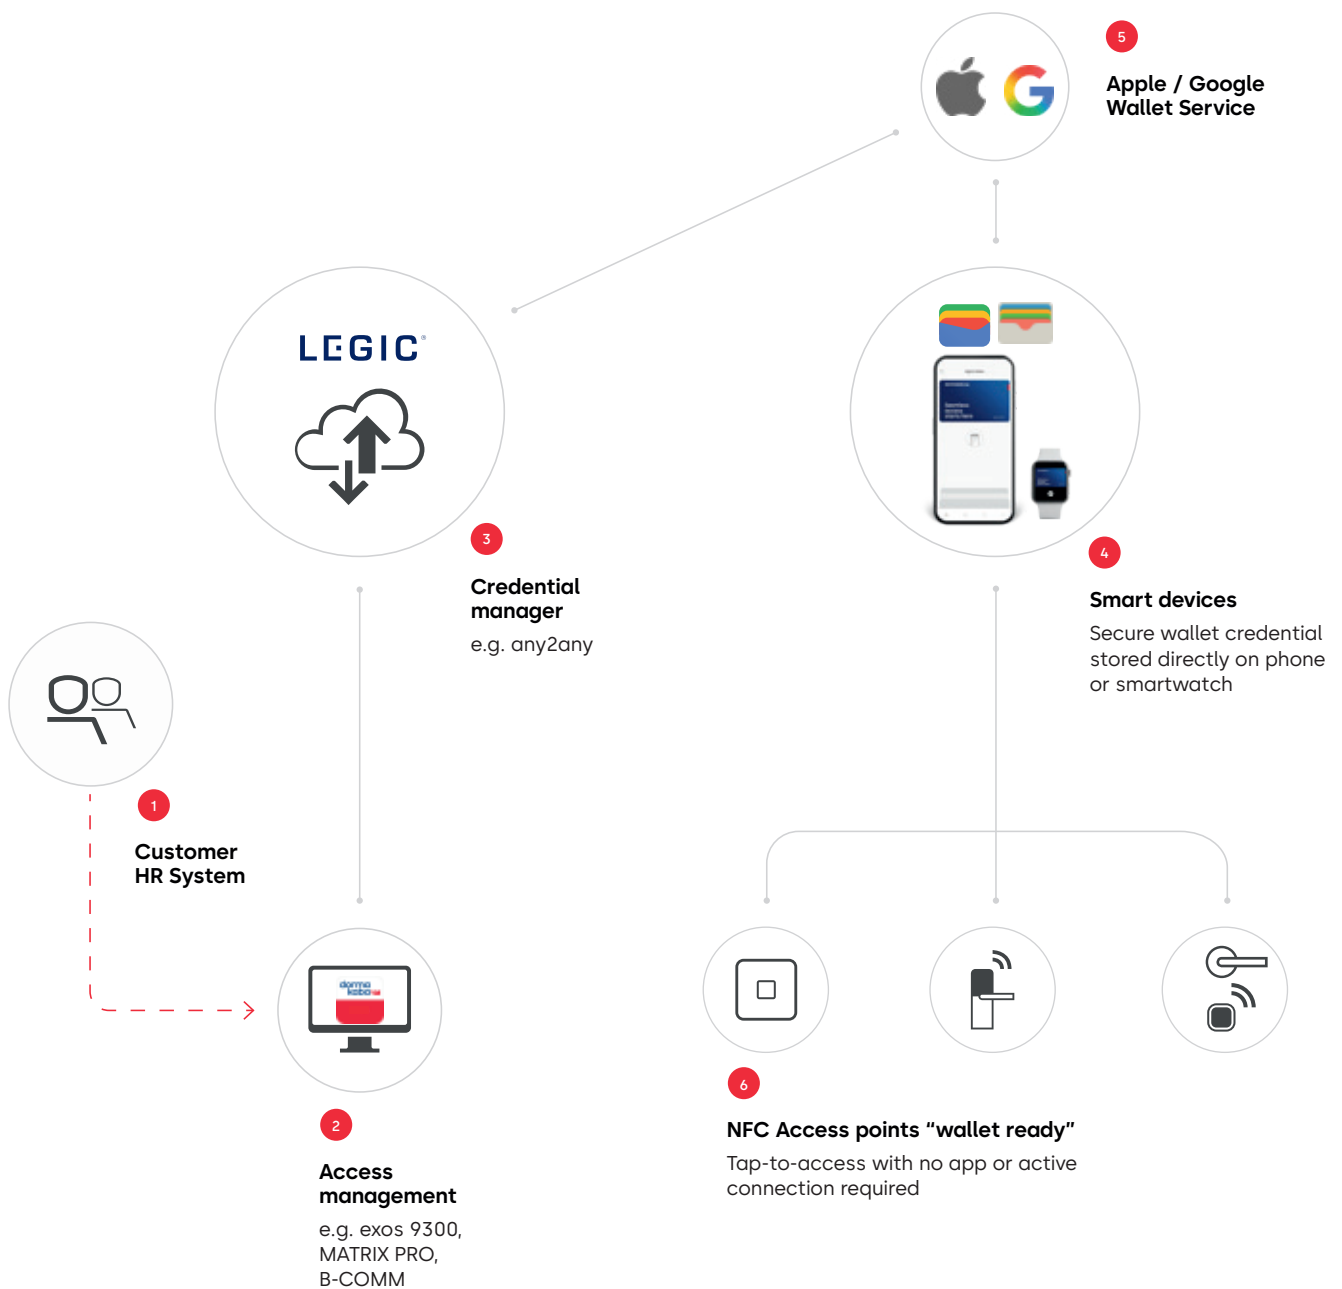

More sustainability access

Reduces plastic credential production and logistics.

One secure experience.

Native deployment and direct control of credential management through dormakaba systems. Standard provisioning is handled through any2any, but any other credential manager can be used on request.

Direct integration with exos 9300 or MATRIX PRO – passive integration with B-COMM.

Designed for every environment

Our success stories demonstrate the quality of our solutions. Wherever groundbreaking projects are implemented today, you will find that they rely on the quality of our solutions.

01

Corporate offices

Delivering seamless, app-less access across high-traffic, multi-tenant environments

02

Finance, government and regulated sectors

Ensuring secure, compliant access with full lifecycle control

03

**Industrial and manufacturing sites**

Providing reliable access across complex, distributed facilities

04

**Transport and infrastructure**

Enabling fast, consistent access at scale

05

**Healthcare and critical environments**

Supporting controlled access where reliability and security are essential

Digital Wallet works for you

Digital Wallet supports everyone responsible for securing, managing and operating modern environments, from IT and security teams to workplace, facilities and integration partners.

IT managers

Reduce complexity across your access environment with centrally managed digital credentials and reduced reliance on physical badge infrastructure.

Security managers

Strengthen protection with device-based credentials, real-time access visibility, as well as the ability for users to instantly lock a lost device and restore access once it is recovered.

Facility & operations

Keep access running smoothly with fewer lost badges, reduced manual access requests, and less day-to-day troubleshooting.

HR & workplace teams

Simplify onboarding and offboarding by sending credentials remotely to new starters and removing access instantly when roles change.

Property owners & developers

Enhance the building experience with seamless mobile access that supports flexible workplaces, premium tenant experiences, and future-ready environments.

Integrators & consultants

Deliver flexible solutions that integrate easily with existing access control systems and adapt to a wide range of building and security architectures.

Reception & front desk teams

Simplify visitor access with credentials delivered in advance, allowing guests to activate access instantly and tap to enter – no apps, no waiting, and no physical badges required.

Ready for app-less access

Digital Wallet combines secure, app-less access with the flexibility to work across different environments, systems and access needs.

Our Sustainability Commitment

We are committed to foster a sustainable development along our entire value chain in line with our economic, environmental and social responsibilities toward current and future generations. Sustainability at product level is an important, future-oriented approach in the field of construction. In order to give quantified disclosures of a product's environmental impact through its entire life cycle, dormakaba provides Environmental Product Declarations (EPD), based on holistic life cycle assessments.
