

The final of the national project "Integration 4.0" within EU Industry Days

On March 9 on the basis of MDEM the final of the national project "Integration 4.0" within EU Industry Days took place.

The online event gathered five regions of Ukraine (Kyiv, Vinnytsia, Zaporizhia, Mykolaiv, Kharkiv), joined by more than 80 participants from Ukraine and Europe, who

had the opportunity to spread their own and adopt a successful clustering experience, get to know about target segments of smart specialization and cluster support tools.

Ukraine is participating in EU Industry Days for the third time. Currently, participants are faced with the task of preparing recommendations that will be included in the formation of the final report - a guide for the European Commission: what is happening in the field of industrial policy, what really works and what needs to be verified.

Olena Zhukova, MDEM Managing Director – which is a member of the Ukrainian Maritime Cluster, told about the company in the context of the national policy of interaction between government, science and business: outlined the main milestones, range of services, experience of integration and MDEM networking.

It is emphasized that the maritime industry is one of the most globalized. The experience of developed maritime states shows that the implementation of a circumspect national maritime policy is the best way to progress. State-level support for maritime clusters has helped consolidate industry players and enable them to stay focused on innovation.

Olena Zhukova paid special attention to the challenges that stand in the way of integration, calling everyone to unite and in her own words: "let's deal with the complexity together."

We offer to get acquainted with participants' presentations, as well as to get to know about the results of the event [here](#).
