Reform Vinyl

Vinyl wall coverings are mildew resistant.

Vinyl wall covering contains bacterial additives that inhibit microbiological growth of Staphylococcus Aureus, Escherichia Coli and Aspergillus Niger.

Manufacturer shall submit a certificate of compliance that wall coverings used meet specifications and modifications herein, upon request of architect.

CLEANING PROCEDURES:

Common dirt stains may be removed from vinyl by rubbing lightly with a moistened cloth, sponge or stiff brush using a mild soap, detergent or non-abrasive cleanser. It is important that clean water be used on a constant basis and that the material be towel dried.

CAUTION:

Strong organic solvents (such as Ketones) and harsh abrasive cleaners are not recommended. These materials will cause dulling, discoloration or softening of the vinyl, thus causing permanent damage. Contact Inscape for any special cleaning solutions.
