

SAINT MINERALS®

Australian Made. Mineral Makeup.

Our responsibility is to enlighten individuals about the significance of using a superior mineral makeup base and primer. SAINT MINERALS® presents an extensive selection of formulations and coverage options crafted to cater to a variety of skin types, address diverse skin conditions and suit different lifestyles.

Our formulations incorporate a minimum SPF15 derived from the purest and finest minerals, Zinc Oxide and Titanium Dioxide. This provides comprehensive protection against both UVA and UVB rays, without the issue of absorption into the skin, as is common with conventional makeup. Instead, SAINT MINERALS® remains on the surface of the skin, functioning as a protective shield between you and your surroundings. This leaves your skin with a durable, breathable and moisturizing foundation.
