Onesait Intelligence

Data analytics for the entire value chain

The complexity and power of data

Data has become the fundamental asset of the most advanced companies and new tools are required to exploit it and generate new revenue streams. Organizations can leverage this data best if they have a single repository.

Utilities manage such large amounts of data that it is paramount to rely on the latest technologies like Big Data and Artificial Intelligence to generate tangible effects.

A single data analysis platform

Onesait Intelligence is an analytics platform meant to analyze the business process of utilities holistically.

Onesait Intelligence blends Data Discovery techniques, Machine Learning, Artificial Intelligence and IoT technology to provide relevant and updated information about the key business processes of a utility.

Onesait Intelligence connects to transactional systems or other external sources through dynamic integration adding business value to raw data.

Data Intelligence Layer

Onesait Intelligence provides data models specifically defined for utilities and their key business processes.

Business Intelligence

With 30+ information areas and 200+ predefined KPIs, Onesait Intelligence supports increasing Customer Value, analyzing billing distributions and anomalies, reducing losses and energy theft, reducing grid operation costs, decreasing demand uncertainty, increasing sustainability, just to name a few major gains for the utility.

Analytics Intelligence

Through the application of Artificial Intelligence and Machine Learning, Onesait Intelligence processed to perform:

- Forecast
- Detection of Anomalies
- Clustering
- Measurement analysis
- Energy Theft
- Debt Management

Making an impact on utilities

Reduction of costs and implementation time

Increased agility and flexibility thanks to the predefined and easily integrated information model, KPIs and dashboards.

Holistic view of the business

Integration, standardization and improvement of information through a single platform that simultaneously facilitates the exchange, exploitation and reporting of data.

Risk reduction

Onesait Intelligence is an accelerator for data analytics projects that keeps the company focused using the existing data models and their customization according to the needs of the business, reducing the risks of project failure.

Our analytics platform provides our customers with...

-80% in implementation time leveraging the information

-30% in operating costs

-60% risk of over spending for implementation or exceeding expected implementation time

+70% of business insights

Sources: Internal analysis & Experience in implemented projects.
