

Preface.....	viii
Introduction	9
The evolution of software engineering	12
From classical programming to high-level abstractions	13
Early predictions of automating programming	14
The current reality: AI adoption and trends.....	15
Product engineering in the age of AI.....	18
Defining product engineering	19
How product engineering differs from other roles	20
The impact of AI on product engineering	22
Product engineering, prompt engineering, and vibe coding: a synthesis.....	25
How AI is reshaping the software engineering role	28
The augmented developer: coding with AI	29
Changes in collaboration and team roles.....	30
Quality, testing, and maintenance in the AI era	32
Will AI replace engineers, or elevate them?.....	33
Future skills and the road ahead.....	37
Writing great requirements and specifications.....	38
Managing and monitoring AI agents	39
Debugging and validating AI-generated outputs	40
Evolving roles and career paths.....	43
Embracing uncertainty and lifelong learning.....	45
Final thoughts: adapting and thriving.....	47
AI-powered development platforms	50
Building with v0.app - AI-powered UI generation.....	51
Accelerating full-stack development with Bolt.new	58
Lovable - your AI full-stack engineer.....	63
Bootstrapping projects with Replit Agent	68
Wrap up.....	74
AI code editors.....	76

Iterating with Cline – a customizable AI coding agent	77
Iterating with Cursor – The AI code editor	82
Windsurf – the agentic IDE by Codeium	87
Pair programming with GitHub Copilot in VS Code	93
Wrap up	99

AI agents and autonomy.....100

Traditional AI interaction.....	101
Retrieval-Augmented Generation (RAG)	102
AI Agents	104
Model Context Protocol (MCP)	106
Agent2Agent protocol (A2A).....	115
Wrap up	117

AI APIs as product building blocks119

OpenAI API: GPT and the rise of accessible intelligence.....	120
Anthropic Claude: an AI assistant with a long memory.....	124
Google Gemini: multi-modal intelligence at scale.....	125
Replicate: a marketplace of models on demand.....	127
Fal.ai: generative media, optimized and ready.....	129
Rapid prototyping and MVPs: building more with less	132
Composing multimodal and complex workflows.....	133
From prototype to production: considerations and evolving best practices.....	135
Evolving primitives in the modern product stack	138

AI-driven team collaboration and workflows.....140

Enhanced developer productivity and happiness	141
Code reviews and quality assurance	141
Pair programming, redefined	142
Knowledge sharing and onboarding.....	143
Agile processes speed up	143
Shifting roles and skillsets.....	144
Collaboration across disciplines	144
Meetings and documentation.....	144
Speculative but informed outlook	146
The middle-class engineer discussion.....	147
Collaboration pain points improved	147

Prompt engineering.....	149
Why prompts matter for product engineers	150
Basic principles of effective prompts.....	150
Advanced prompt engineering techniques for high performance	151
Prompt engineering strategies for Bolt	153
Prompt engineering strategies for Lovable.....	157
Prompt engineering strategies for v0.app	159
Prompt engineering strategies for Cursor.....	162
Prompt engineering strategies for Cline	166
Prompt engineering strategies for Replit Agent.....	169
Wrap Up.....	172
 AI-assisted debugging and code quality.....	 174
Interactive debug sessions	175
Maintaining code quality (reviews & refactoring).....	176
Refactoring and maintainability	176
Balancing AI suggestions with human judgment.....	177
 AI-driven UX/UI design and optimization	 178
Personalizing UX with AI insights.....	179
Rapid prototyping and wireframing	180
Usability testing and feedback with AI.....	181
Accessibility and inclusive design	181
 AI-first product development strategies	 183
Flow engineering and multi-agent orchestration.....	184
Continuous learning and improvement.....	185
Ethics and responsible AI development.....	186
Emerging trends and tools.....	186
 The future of software engineering.....	 191
From code-centric to product-centric.....	192
New roles and career paths.....	192
The “middle-class” engineer and team structures	193
Continuous learning and adaptation	193
Ethical and intellectual property considerations	194
AI as a collaborative entity.....	194

Focus on creativity and problem-solving.....195

The stack of the future.....195

Longevity of code and shelf-life of knowledge196

Tools convergence and simplification196

Final thoughts.....196
