

What happens to cups?

1. Collections

Paper cups are collected at collection locations.

2. Pick up

We pick up cups from collection locations and check there is no contamination such as liquids, lids or straws!

3. Processing

Paper cups are taken to processing facilities, where our team process the used cups.

Processing includes washing and drying, shredding, compacting or blending to make flakes, pellets, glue or a mix of these!

4. Made into sustainable products

Processed cups are sent to our partners to be made into sustainable products found in the community!
