Dr. René Daher joined the Division of Cariology and Endodontology at the University of Geneva in 2014 as a teaching and research assistant where he then obtained his Doctorate in Dental Medicine in 2019. In that same year, he also obtained his PhD from the Department of Dental Biomaterials at ACTA (Amsterdam, Netherlands) under the co-supervision of Professors Albert Feilzer and Ivo Krejci. In 2020, Dr. Daher participated with Professors Irena Sailer and Ivo Krejci, and MDT Vincent Fehmer in the creation of the new multidisciplinary Master of Advanced Studies in Digital Dental Technologies at the University of Geneva, for which he is currently coordinator and member of its steering committee.

Is 3D printing a hype or a radical change in dental manufacturing?

This presentation will cover the basics of 3D printing in dentistry and show through clinical cases the main applications where it could be beneficial to our practice, such as for the production of indirect composite resin restoration, surgical guides, removable dentures and prototypes.

This presentation will also detail the important factors to consider before investing in these technologies, as well as the financial and practical rationale behind it.
