

IP Network PA System

NT-903 IP

IP Network PA System NT-903 IP

This two-way communication panel allows instant talk by pressing a button and provides a full-duplex network audio solution. It is ideal for banks, hospitals, schools, prisons, mining plants, transportation hubs, airports, and metro or subway systems. The full IP/TCP network system can operate over standard, non-dedicated networks and enables intercom connections with other units or the T-6702 duty microphone. It features ring call functionality with automatic transfer if the line is busy or unanswered. A 2.8" LCD displays the IP address and system status for intuitive operation. The unit includes a high-sensitivity built-in microphone and a 10W+10W stereo amplifier. Duty microphones or a PC server can broadcast music or voice messages directly. Local auxiliary input and output ports allow zone-specific use and connection to external amplifiers, while a dry contact output enables integration with third-party systems. The panel is powered by a safe DC 24V supply and ensures minimal data delay with no echo for clear communication.

PARAMETER	
Model	NT-903 IP
Line voltage	AC 220V / 50Hz
Dimension (mm)	240 × 115 × 50
Weight (Kg)	1
Gross weight (Kg)	1.3
