

IP Network PA System

NT-908 IP

IP Software (NT-908 IP)

An IP network audio system host designed for centralized broadcasting, zone paging, monitoring, and system management. It supports TCP/IP communication, scheduled audio playback, priority broadcast control, password protection, and easy integration with CCTV, access control, and other third-party systems.

PARAMETER	
Product Type	IP PA Software / Audio Host
System Function	Broadcast, Paging & Monitoring
Communication Protocol	TCP/IP Network
Broadcast Control	Scheduled & Priority Broadcast
Zone Management	Multi-Zone Control
Monitoring Function	Terminal Status Monitoring
Security Function	Password Protection
Integration	CCTV / Access Control / Third-Party System
Application	PA, Paging & Emergency Audio

Key Features

The IP Network PA System is designed for centralized audio broadcasting, zone paging, monitoring, and system management. It supports TCP/IP network communication for stable operation, scheduled audio playback for automatic announcements, and priority broadcast control for emergency use. With multi-zone control, real-time terminal status monitoring, password protection, and easy integration with CCTV, access control, and third-party systems, it is suitable for PA, paging, and emergency audio applications.
