Complete **Fire & Life Safety Solutions** for a Safer Tomorrow

- Trusted Brands
- Quality Products
- Expert Support
- UAE Wide Delivery

FIRE SAFETY BUILDS SAFER PEOPLE, PLACES AND BUSINESSES

Commercial Buildings

Industrial Facilities

Residential Developments

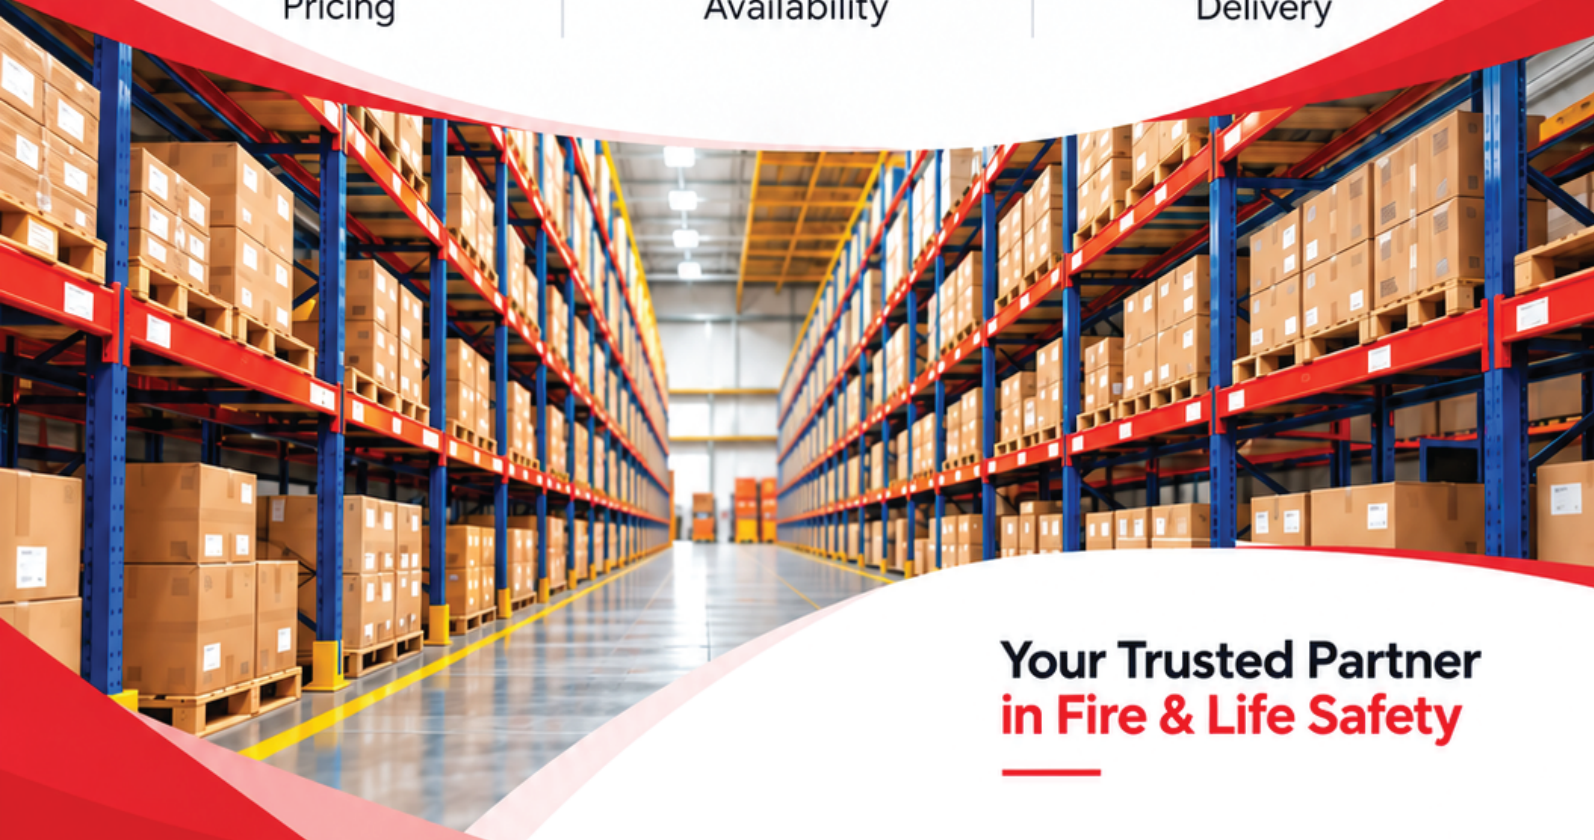

Hospitals & Healthcare

About
Safety Shops

Safety Shops is a UAE-based supplier of high-quality fire & life safety equipment, serving commercial, industrial and residential projects across the region. We provide reliable products from global brands along with expert support to ensure safer buildings and communities.

- Wide Product Range
- Genuine Global Brands
- Technical Support
- Competitive Pricing
- Reliable Stock Availability
- UAE Wide Delivery

Your Trusted Partner in Fire & Life Safety

FIRE DETECTION & ALARM SYSTEMS

Integrated Fire and Voice Control Panel

- UL 864 10th Edition & FM Approved
- Point flexibility of up to 2,100 points
- Supports 2000W per system
- Up to 64,000 watts of power across the network
- Amplifiers supporting 520 Hz low frequency
- Distributed SLC expanders and amplifiers throughout the field
- Option to configure 15 recordable one-minute messages
- Available in red or black cabinet
- Enhanced intelligent network monitoring via graphics
- Secured communication over wired/wireless multifunctional devices
- Seamless integration with BMS

FIRE DETECTION & ALARM SYSTEMS (UL-LISTED)

Hochiki Fire Alarm Solutions

- Advanced Addressable Fire Detection & Alarm Systems
- 2, 4 & 8 Zone Fire Control Panels available
- Intelligent Smoke, Heat & Multi-Sensor Detectors
- Manual Call Points & Beam Detection Solutions
- Reliable Audio/Visual Alarm Devices
- Flexible solutions for Commercial & Industrial Applications
- Designed for reliable detection and effective system monitoring
- Networkable System Architecture for flexible system expansion
- Wide range of Modules, Interfaces & System Accessories available

Single-Stage Centrifugal Fire Pump

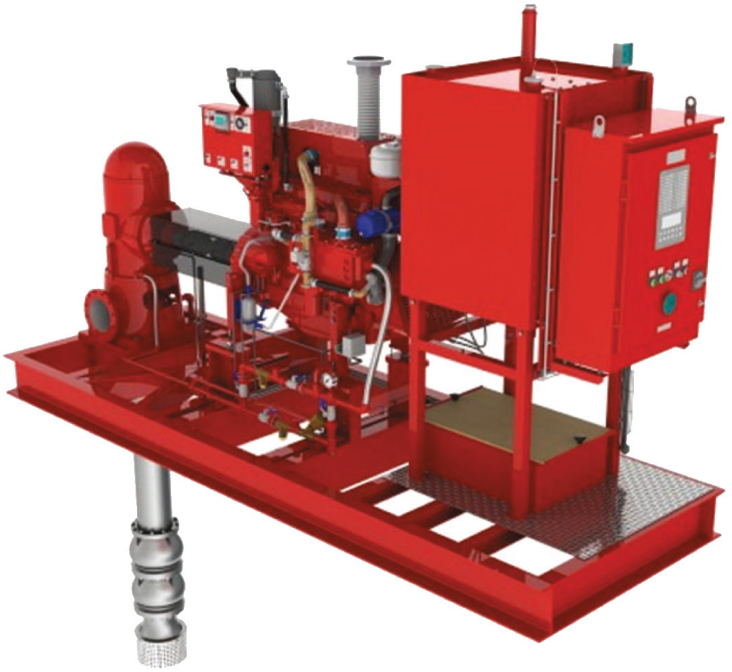

UL-LISTED VERTICAL TURBINE FIRE PUMP

We offer Vertical Turbine Fire Pumps as space-saving pump room solutions with highly efficient designs. These pumps are engineered for standpipe, sprinkler, chemical mitigation, and hydrant systems. The modular construction ensures complete flexibility in pump selection. Bowls and suction bells are bolted together to allow easier disassembly. Dynamically balanced impellers are secured to the shaft with steel locking. Our pumps comply with NFPA 20, UL, ULC, and FM requirements.

Features:

- Operates in full compliance with NFPA 20 and UL 448 requirements
- Available in models ranging from 50 to 1500 US GPM
- Driven by electric motors or diesel engines
- Electrical testing capabilities for motors and controllers as per NFPA standards
- Rugged construction for enhanced service life
- Specifically designed for firefighting applications in line with NFPA 20
- Excellent mechanical and hydraulic design for optimized performance

ROLLING SHUTTERS & FIRE/SMOKE DAMPERS

ROLLING SHUTTERS (UL-LISTED)

Our rolling shutters offer fire protection and smooth daily operation. Manual models feature advanced spring systems for easy lifting, even for large shutters. Electric shutters provide top-tier security and can cover wide areas with a single unit. Group controls allow multiple shutters to operate simultaneously. Fire ratings of up to 120 minutes (UL) and 240 minutes (BS) are available.

Applications:

- Warehouses
- Industrial facilities

Options:

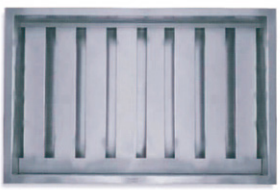

- Manually operated
- Automatically operated

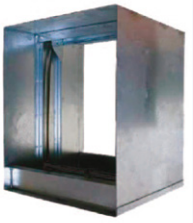

FIRE & SMOKE DAMPERS (UL-LISTED)

Modern building projects require advanced safety measures, including fire dampers to maintain the fire resistance of walls, partitions, and floors as mandated by AHJs. Curtain-type dampers prevent fire and smoke from spreading through ducts and are suitable for concrete, brick, or gypsum walls and ceilings, with 2-hour fire ratings. They include 72°C fusible links, with motorized options available for integration with smoke extraction systems.

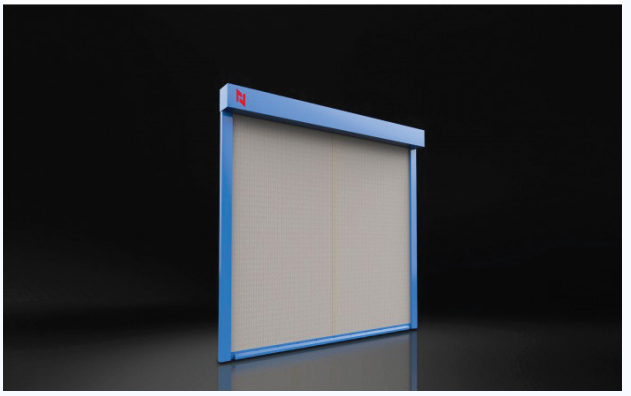

FIRE & SMOKE CURTAINS (UL-LISTED)

We provide fire and smoke curtains that are used when it is necessary to create a temporary barrier within an opening to seal off the area affected by fire. Our curtain systems automatically descend and prevent the spread of fire and smoke from one area to another. They are also designed to allow safe access to protected escape routes without compromising fire resistance.

Application :

1. Elevators and Elevator Lobbies
2. Warehouses
3. Escalators and Staircases
4. Corridors and Escape Routes

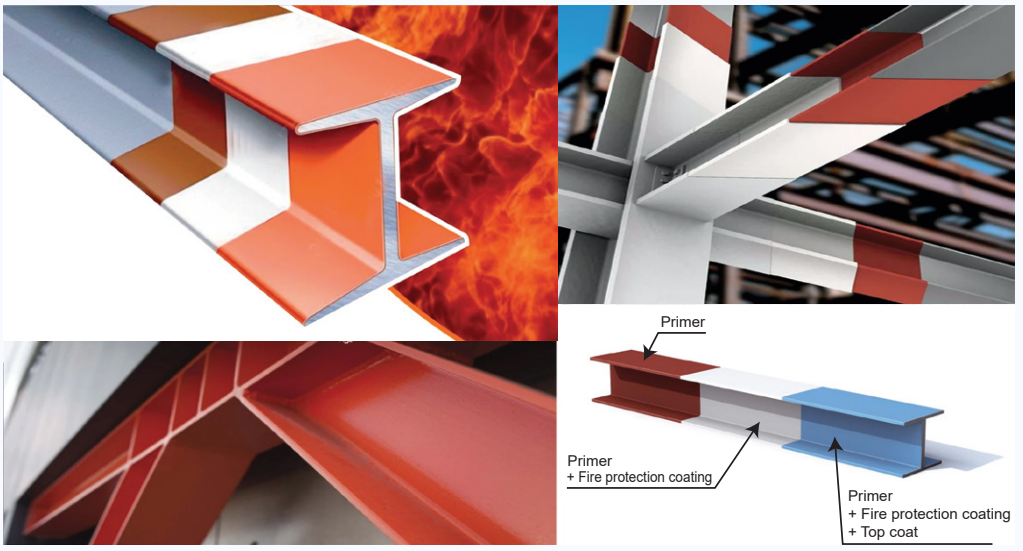

LIFT LANDING DOOR

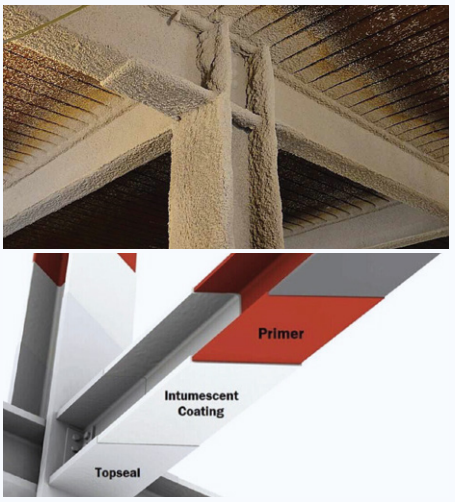

FIRE RETARDANT PAINT (UL-LISTED)

Fire retardant paint protects the structural components of your building during a fire. Our range of paint can be applied to steel structures, concrete, and more, offering a high level of protection. We supply UL-listed fire retardant coatings that can protect structural elements for up to 4 hours.

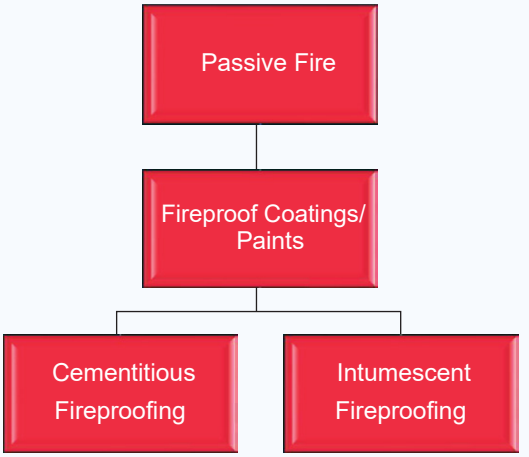

WHAT IS FIREPROOFING

All materials weaken when exposed to high temperatures. For steel, it is well-established that at 550°C, hot-rolled structural steel retains only about 60% of its strength compared to its room temperature performance. This has led to the common assumption that 550°C is the maximum (limiting) temperature a steel structure can withstand before failing or collapsing.

Types of Fireproofing

FIRESTOP AND FIRE PROTECTION SYSTEM

Hilti, a Germany-based brand, offers UL-listed passive fire protection products that prevent the spread of fire, smoke, and gases. Trusted worldwide for innovation and reliability, we are an authorized distributor providing certified Hilti solutions for code-compliant, long-term building safety.

FOAM & GAS-BASED SUPPRESSION SYSTEM

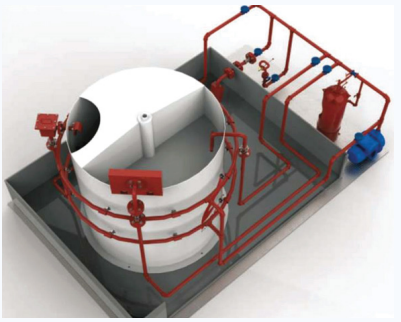

FOAM BASED SUPPRESSION SYSTEM

We offer foam-based suppression systems that use specialized foam agents to extinguish fires by smothering flames and preventing re-ignition. Our solutions are especially effective against flammable liquid and volatile substance fires, creating a protective barrier that cuts off oxygen and cools the fire.

Applications:

1. Flammable Liquids
2. Marine Applications
3. Industrial Facilities
4. Commercial Kitchens

GAS-BASED SUPPRESSION SYSTEM

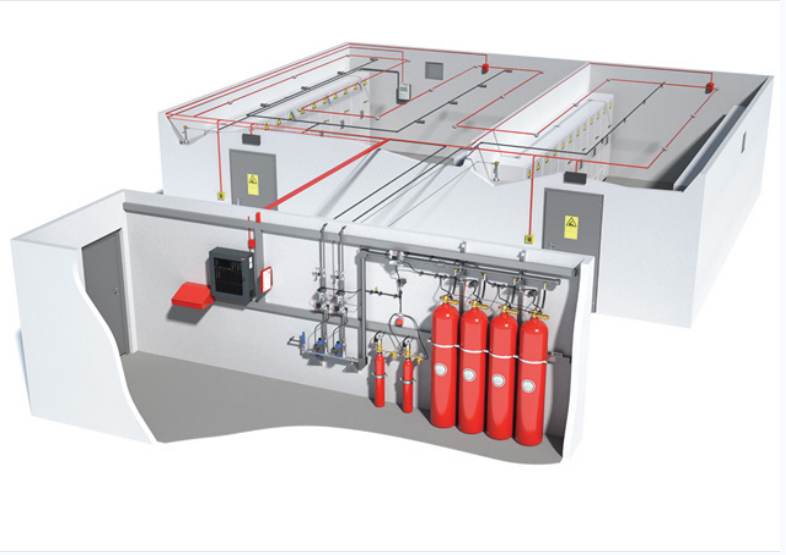

Our gas-based suppression systems are designed to extinguish fires by reducing oxygen levels, cooling flames, or disrupting the combustion process. Ideal for areas with sensitive equipment, we provide effective fire protection without the risk of water damage or extensive clean-up.

Applications

1. Data Centers
2. Telecommunications Facilities
3. Electrical Switchgear / Control Rooms

Clean Agent Gases:

- FM-200 (HFC-227ea)
- Novec 1230
- Inergen (IG-541)
- CO_2 (Carbon Dioxide)
- Aerosol-Based
- DLP-Based

FIREFIGHTER GEAR

Shelter provides reliable firefighter protective gear designed for demanding emergency environments. The range includes training suits, firefighter suits, protective gloves and safety boots, offering dependable protection, comfort and durability for firefighting professionals.
