Professional Experience

Android Base Job’s Finder

2014-2015

Final Year project(Android application + Website).

- PHP
- XAMP/WAMP(local Server) and placed website on online Server
- Our motive is to accurately and efficiently match job seekers and companies and to minimize the problems of an applicant to find a correct job. Our application has several useful features. The’ job seekers’ can put their whole details and they can view and modify their submitted details. Students who are supposed to be job seekers can apply to their needed post. The’ job Employer’ or company can post the details clearly of their need. They can search the potential candidates for their company through proposed ‘Android Based Jobs Application’. The ‘Administrator’ can update portal design, dump archives, and handle Portal to Android app communication.
