

WASTE MANAGEMENT of the property

At eQ Premises, we strive for sustainability in all our actions. As a property owner, we aim for the highest possible recycling rate and a low carbon footprint.

Follow these principles for waste management:

Recycling benefits everyone

Recycling helps us save resources and energy, reduce emissions, and promotes a circular economy. It can even help to reduce costs.

Waste sorting made easy

The property layout is designed to make it easier to sort waste. If you need help finding sorting points or in recycling your waste, please get in touch with the property manager.

Monitoring the amount and sorting of waste

Waste monitoring is part of the property reporting process. Sites are surveyed, and recycling is stepped up where necessary. See waste data for your property: [eqhaku.fi](https://www.eqhaku.fi)

Aim to reduce mixed waste

We aim to reduce mixed waste and increase recycling rates, and we encourage all users of our facilities to do the same.

Ask your property manager for more information about waste management at your property.
