

# WATER CONSUMPTION in the property

*Small actions make a difference. By using water responsibly, you save both money and the environment. Please pay attention to your water consumption.*

## Use water only when needed

### Do not run water unnecessarily

Avoid washing dishes by hand under running water. Turn off the tap while soaping, washing your hands, or using the public shower facilities at work. If your property is not yet equipped with automatic faucets, contact the property manager.

### Use cooler water

Hot water is approximately three times more expensive than cold water. It also takes a lot of energy to produce hot water.

### Go for the full load

If you have a dishwasher, avoid washing dishes by hand. Wait until you have a full load before you switch the dishwasher on.

### Report a dripping tap or toilet to the service department

If a tap leaks at 0.5 dl per minute, you are wasting 500 litres of water weekly. Contact the service if you notice a leaky tap or toilet.

### Real-time monitoring

We monitor the water consumption of our sites in real-time. For up-to-date information, visit [www.eq.fi](http://www.eq.fi).

### In cooperation with the user of the facilities

Consumption monitoring is carried out in cooperation with the user of the premises. Sharing consumption data encourages efficient water use.

### Checking water consumption in annual cycles

During annual rounds, the property manager checks the property's water consumption. Any discrepancies will be clarified.

### The aim is to reduce water use

Reducing water consumption will reduce costs. If needed, the property manager will replace water fixtures with more efficient ones.
