FRED™

FORENSIC RECOVERY OF EVIDENCE DEVICE

Sets the Bar for Digital Forensic Workstations

Digital Intelligence FRED systems are specifically engineered to support the demands of digital forensics. Regardless of forensic task - acquisition, analysis, reporting, or archiving - FRED systems are unmatched in features, capabilities, and performance.

FRED Forensic Workstations - Powered by Intel

With more than 25 years of experience in system integration, Digital Intelligence has developed a deep understanding of the requirements for a high-quality forensic workstation. The FRED forensic workstation has been updated to deliver enhanced processing power, featuring advanced evidence acquisition tools and a potent CPU to optimize efficiency. The standard base FRED system includes an Intel® Core™ Ultra 9 285K 24-core processor (8 performance cores / 16 efficiency cores) and 128 GB of PC5-41600 DDR5 5200 MHz RAM. A variety of upgrade options are available, allowing customization to meet specific application needs.

HotSwap and RAID Storage Options for Effective Processing

Non-RAID FREDs offer up to ten drive locations: four internal M.2 NVMe, two SATA III connected HotSwap, and four USB 3.2 connected SATA HotSwap. Exclusive to FRED, the USB 3.2-connected drives are switchable read-only / read/write for additional forensic imaging capability.

FRED single (1R) and dual (2R) RAID systems provide extensive local, fault-tolerant data storage for security and application processing speed. Built with ultra-high speed Areca hardware RAID controllers, all FRED RAID systems deliver optimum performance. RAID options now include internal PCIe-connected M.2 NVMe cards (supporting 4 or 6 drives) as well as externally accessible drive chassis with 5 or 10 drives.

Unmatched Forensic Imaging: UltraBay 4d and Forensic Drive Trays

The UltraBay 4d is the forensic imaging focal point on FRED. Proven, efficient, and recognized by all leading forensic imaging software, the UltraBay 4d supports fast forensic acquisition of SATA, SAS, USB, PCIe, and FireWire devices. It's unique touchscreen allows for independent device information access [or independent access of device information], bypassing the OS. Multiple devices can be imaged simultaneously, and it can be safely switched to read-write mode for general purpose drive maintenance.

Need more write-blocking capacity? Switch a USB 3.2-connected drive tray to read-only, insert a drive, and start imaging. This capability is available only on a FRED.

Change Features On the Fly with the Drive Tray Ecosystem

FRED's USB 3.2-connected HotSwap drive trays support interchanging features by simply swapping out a drive tray. All FRED systems ship with the USB 3.2-integrated SATA tray (read/write or write-blocked switchable). See the tech specs section for additional tray information.
